Report on review of condensed

interim accounting information

To the Board of Directors and Stockholders

Vale S.A.

Introduction

We have reviewed the accompanying balance sheet of Vale S.A. (the Company) as of June 30, 2012, and the related statements of income and comprehensive income for the quarter and six-month periods then ended, and the statements of changes in equity and cash flows for the six-month period then ended.

We have also reviewed the accompanying consolidated balance sheet of Vale S.A. and its subsidiaries (Consolidated) as of June 30, 2012, and the related consolidated statements of income and comprehensive income for the quarter and six-month periods then ended, and the statements of changes in equity and cash flows for six-month period then ended.

Management is responsible for the preparation of the Company condensed interim accounting information in accordance with the accounting standard CPC 21, *Demonstração Intermediária*, issued by the Brazilian Accounting Pronouncements Committee (CPC), and the consolidated condensed interim accounting information in accordance with accounting standard CPC 21 and International Accounting Standard (IAS) 34 - Interim Financial Reporting issued by the International Accounting Standards Board (IASB). Our responsibility is to express a conclusion on these condensed interim accounting information based on our review.

Scope of review

We conducted our review in accordance with Brazilian and International Standards on Reviews of Interim Financial Information (NBC TR 2410 - *Revisão de Informações Intermediárias Executada pelo Auditor da Entidade* and ISRE 2410 - Review of Interim Financial Information Performed by the Independent Auditor of the Entity, respectively). A review of interim information consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Brazilian and International Standards on Auditing and consequently does not enable us to

Edgar Filing: Vale S.A. - Form 6-K

obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion

2 - Basis of presentation

The condensed interim financial statements (interim financial statements) have been prepared considering historical cost as the basis of value and adjusted to reflect the financial assets available for sale, and financial assets and liabilities (including derivative instruments) measured at fair value. The financial statements for the periods of three months ended June 30, 2012, March 31, 2012, June 30, 2011 and the period of six months ended June 30, 2012 and June 30, 2011 are unaudited. However, the interim financial statements follow the principles, methods and standards in relation to those adopted annual audited financial statements for the year ended December 31, 2011, except for the change in accounting policy disclosed in Note 3, and therefore should be read in conjunction therewith.

In preparing the interim financial statements the use of estimates is required to account for certain assets, liabilities and transactions. Consequently, the Company's interim financial statements include various estimates regarding useful lives of fixed assets, provisions for losses on assets, contingencies, operating provisions and other similar evaluations. The actual results of operations for the quarterly periods are not necessarily an indication of expected results for the fiscal year to end on December 31, 2012.

The Company has evaluated subsequent events until July 23, 2012, which is the date of the interim financial statements approval by the Executive Directors.

a) Consolidated interim financial statements

The consolidated interim financial statements of the company have been prepared and are presented according to the Accounting Pronouncements Committee - CPC 21 (R1) Interim Financial Statements, equivalent to International Accounting Standard - IAS 34.

b) Parent company interim financial statements

The interim financial statements of the individual parent have been prepared under the Accounting Pronouncements Committee - CPC 21 (R1) Interim Statements are presented with the consolidated interim financial statements.

In the case of Vale, CPC 21 applied to individual interim financial statements differs from IAS 34, applied to the separate financial statements, only in the valuation of investments by the equity method in subsidiaries and affiliates, as according to IAS 34, cost or fair value would be used.

c) Transactions and balances in foreign exchange

Operations with other currencies are translated into the functional currency of the parent company, Brazilian Reals (BRL or R\$), using the actual exchange rate on the transaction dates (or, if unavailable, the first available exchange rate). The foreign exchange gains and losses resulting from the settlement of these transactions and from the translation by exchange rates at the end of the year, relating to monetary assets and liabilities in other currencies, are recognized in the statement of income as financial expense or income.

The quotations of major currencies that impact our operations were:

7 - Acquisitions and Disposals

a) Fertilizer s Business

In 2010, through our wholly owned subsidiary Mineração Naque S.A. (Naque), Vale acquired 78.92% of the total capital (being 99.83% the of voting capital) of Vale Fertilizantes S.A. and 100% of the total capital of Vale Fosfatados. In 2011 and beginning of 2012, Vale concluded several transactions including a public offer to acquire the free floating of Vale Fertilizantes and its delisting which resulted in the current ownership of 100% of the total capital of this subsidiary.

The purchase consideration of the business combination effected in 2010, when control was obtained, amounted all together to R\$10,696 millions. The purchase price allocation exercise was concluded in 2011 and generated a deferred tax liability on the fair value adjustments, determined based on the temporary differences between the accounting basis of those assets and liabilities at fair values and their tax basis represented by the historical carrying values at the acquired entity. According to current Brazilian tax regulations, goodwill generated in connection with a business combination as well as the fair values of assets and liabilities acquired are only tax deductible post a legal merger between the acquirer and the acquiree.

In June 2012, Vale have decided to legally merge Naque and Vale Fertilizantes. As a result, the carrying amounts of acquired assets and liabilities accounted for at Naque s consolidated financial statements, represented by their amortized fair values from acquisition date, became their tax basis.

Therefore, upon concluding the merger, there are no longer differences between tax basis and carrying amounts of the net assets acquired, and consequently there is no longer deferred tax liability amount to be recognized. The outstanding balance of the initially recognized deferred tax liability (accounted for in connection with the purchase accounting) totaling R\$ 2,533 millions was entirely recycled through P&L for the six-month period ended June 30, 2012, in connection with the legal merger of Vale Fertilizantes into Naque.

In addition, Naque was then renamed as Vale Fertilizantes.

b) Sale of coal

Edgar Filing: Vale S.A. - Form 6-K

In June 2012, Vale informed that it has concluded the sale of its thermal coal operations in Colombia to CPC S.A.S., an affiliate of Colombian Natural Resources S.A.S. (CNR), a privately held company, which includes future compromises around of R\$ 245,302.

The thermal coal operations in Colombia constitute a fully-integrated mine-railway-port system consisting of a coal mine and a coal deposit; a coal port facility; and an equity participation in a railway connecting the coal mines to the port.

The loss on this transaction, of R\$721,808 was recorded in the income statement in the line Realized gain (loss) on non-current assets held for sales .

c) Acquisition of EBM shares

Continuing the process of optimization its corporate structure, during 2Q12 Vale acquired additional 10.46% of Empreendimentos Brasileiros de Mineração S. A. (EBM), whose main asset is the participation in Minerações Brasileiras Reunidas S. A., wich owns mines sites Itabirito, Vargem Grande and Paraopeba.

As a result of the acquisition, Vale increased its share on the capital of EBM to 96.7% and of MBR to 98.3%, and the amounts of R\$ 449,988 are recognized as a result from operations with non-controlling interest in Stockholders Equity .

11 - Assets and liabilities held for sale

In connection with our strategy of active portfolio asset management, on July 10, 2012, we informed that it has signed a share purchase agreement to sell its manganese ferroalloys operations in Europe to subsidiaries of Glencore International Plc., a company listed on the London and Hong Kong Stock Exchanges, for R\$ 318 in cash, subject to the fulfillment of certain precedent conditions. Vale recorded a loss of R\$ 45 millions presented on its statement of income as gain (loss) sale of assets .

The manganese ferroalloys operations in Europe consist of: (a) 100% of Vale Manganèse France SAS, located in Dunkerque, France; and (b) 100% of Vale Manganese Norway AS, located in Mo I Rana, Norway.

19 - Asset retirement obligation

The Company uses various judgments and assumptions when measuring the obligations related to the discontinuation of the use of assets. The accrued amount is not deducted from the potential costs covered by insurance or indemnities, because their recovery is considered uncertain.

Long term interest rates used to discount to present value and update the provision to June 30, 2012 and December 31, 2011 were 5.82% p.y. The liability is periodically updated based on these discount rates plus the inflation index (IGP-M) for the period in reference.

The variation in the provision for asset retirement is demonstrated as follows:

23 - Fair Value Estimative

Due to the short-term cycle, it is assumed that the fair value of cash and cash equivalents balances, short-term investments, accounts receivable and accounts payable are close to their book values. For measurement and determination of fair value, the Company uses various methods including market approaches, income or cost, in order to estimate the value that market participants would use when pricing the asset or liability. The financial assets and liabilities recorded at fair value should be classified and disclosed in accordance with the following levels:

Level 1 Unadjusted quoted prices on an active, liquid and visible market for identical assets or liabilities that are accessible at the measurement date;

Level 2 - Quoted prices (adjusted or unadjusted) for identical or similar assets or liabilities on active markets; and

Level 3 - Assets and liabilities, where quoted prices, do not exist, or where prices or valuation techniques are supported by little or no market activity, unobservable or illiquid.

The tables below present the assets and liabilities of the parent and the consolidated company measured at fair value on June 30, 2012 and December 31, 2011.

a) **Methods and Techniques of Evaluation**

i. **Assets and liabilities at fair value through profits or loss**

Comprise derivatives not designated as hedges and stockholders debentures.

- **Derivatives designated or not as hedge**

The financial instruments were evaluated by calculating their present value through the use of curves that impact the instrument on the dates of verification. The curves and prices used in the calculation for each group of instruments are detailed in the market curves .

The pricing method used in the case of European options is the Black & Scholes model. In this model, the fair value of the derivative is a function of volatility and price of the underlying asset, the exercise price of the option, the interest rate and period to maturity. In the case of options when the income is a function of the average price of the underlying asset over a period of life of the option, called Asian, we use the model of Turnbull & Wakeman. In this model, besides the factors that influence the option price in the Black-Scholes model, is considered the forming period of the average price.

In the case of swaps, both the present value of the active tip and the passive tip are estimated by discounting cash flows by the interest rate of the currency in which the swap is denominated. The difference between the present value of active tip and passive tip of swap generates its fair value.

In the case of swaps tied to Long-Term Interest Rate (TJLP), the calculation of fair value considers the TJLP constant, that is, projections of future cash flows in Brazilian Real are made considering the last TJLP disclosed.

Contracts for the purchase or sale of products, inputs and costs of selling with future settlement are priced using the forward curves for each product. Typically, these curves are obtained in the stock exchange where the products are traded, such as the London Metals Exchange (LME), the Commodity Exchange (COMEX) or other providers of market prices. When there is no price for the desired maturity, Vale uses interpolation between the available maturities.

• **Stockholders Debentures**

Comprise the debentures issued on behalf of the privatization process (see note 29(b)), whose fair values are measured based on market approach, and its reference prices are available on the secondary market.

ii. **Assets available-for-sales**

Comprise the assets that are not held-to-maturity, for strategic reasons. Comprise investments that are valued based on quoted prices in active markets where available or internal assessments based on expected future cash flows of the assets.

b) **Fair value measurement compared to book value**

For the loans allocated in the level 1, the evaluation method used to estimate the fair value of debt is the market approach to the contracts listed on the secondary market. And for the loans allocated in the level 2, the fair value for both fixed-indexed rate debt and floating rate is determined from the discounted cash flow using the future values of the Libor rate and the curve of Vale's Bonds (income approach).

The fair values and carrying amounts of non-current loans (net of interest) are shown in the table below:

Additional information about derivatives financial instruments

Value at Risk computation methodology

The Value at Risk of the positions was measured using a delta-Normal parametric approach, which considers that the future distribution of the risk factors - and its correlations - tends to present the same statistic properties verified in the historical data. The value at risk of Vale's derivatives current positions was estimated considering one business day time horizon and a 95% confidence level.

Contracts subjected to margin calls

Vale has contracts subject to margin calls only for part of nickel trades executed by its wholly-owned subsidiary Vale Canada Ltd. The total cash amount as of June 30, 2012 is not relevant.

Initial Cost of Contracts

The financial derivatives negotiated by Vale and its controlled companies described in this document didn't have initial costs (initial cash flow) associated.

The following tables show as of June 30, 2012, the derivatives positions for Vale and controlled companies with the following information: notional amount, fair value, value at risk, gains or losses in the period and the fair value for the remaining years of the operations per each group of instruments.

R\$/US\$ Exchange Rate Adopted in Fair Value Calculation

According with accounting principles, the fair values of derivative instruments originally negotiated in American dollar were transform in R\$ values with the objective of publish in the Vale's official currency using PTAX (sell) published by BACEN to July 02, 2012, that is 1.9893.

Protection program for the Real denominated debt indexed to CDI

- CDI vs. US\$ fixed rate swap** In order to reduce the cash flow volatility, Vale entered into swap transactions to convert the cash flows from debt instruments denominated in Brazilian Reais linked to CDI to U.S. Dollars. In those swaps, Vale pays fixed rates in U.S. Dollars and receives payments linked to CDI.
- CDI vs. US\$ floating rate swap** In order to reduce the cash flow volatility, Vale entered into swap transactions to convert the cash flows from debt instruments denominated in Brazilian Reais linked to CDI to U.S. Dollars. In those swaps, Vale pays floating rates in U.S. Dollars (Libor - London Interbank Offered Rate) and receives payments linked to CDI.

Those instruments were used to convert the cash flows from debentures issued in 2006 with a nominal value of R\$ 5.5 billion, from the NCE (Credit Export Notes) issued in 2008 with nominal value of R\$ 2 billion and also from property and services acquisition financing realized in 2006 and 2007 with nominal value of R\$ 1 billion.

Foreign Exchange cash flow hedge

- **Brazilian Real fixed rate vs. US\$ fixed rate swap** In order to reduce the cash flow volatility, Vale entered into swap transactions to mitigate the foreign exchange exposure that arises from the currency mismatch between the revenues denominated in U.S. Dollars and the disbursements and investments denominated in Brazilian Reais.

Protection program for Euro denominated debt

- **EUR fixed rate vs. US\$ fixed rate swap:** In order to hedge the cash flow volatility, Vale entered into a swap transaction to convert the cash flows from loans in Euros linked to fixed rate to U.S. Dollars linked to fixed rate. Vale receives fixed rates in Euros and pays fixed rates in U.S. Dollars. This trade was used to convert the cash flow of a debt in Euros, with an outstanding notional amount of 750 million, issued in 2010 by Vale.

Commodity Derivative Positions

The Company's cash flow is also exposed to several market risks associated to global commodities price volatilities. To offset these volatilities, Vale contracted the following derivatives transactions:

Nickel Sales Hedging Program

In order to reduce the cash flow volatility in 2012, hedging transactions were implemented. These transactions fixed the prices of part of the sales in the period.

The P&L shown in the table above is offset by the protected items P&L due to Nickel price.

Nickel Fixed Price Program

In order to maintain the exposure to Nickel price fluctuations, we entered into derivatives to convert to floating prices all contracts with clients that required a fixed price. These trades aim to guarantee that the prices of these operations would be the same of the average prices negotiated in LME in the date the product is delivered to the client. It normally involves buying Nickel forwards (Over-the-Counter) or futures (exchange negotiated). Those operations are usually reverted before the maturity in order to match the settlement dates of the commercial contracts in which the prices are fixed. Whenever the Nickel Sales Hedging Program is executed, the Nickel Fixed Price Program is interrupted.

The P&L shown in the table above is offset by the protected items P&L due to Nickel price.

Nickel Purchase Protection Program

In order to reduce the cash flow volatility and eliminate the mismatch between the pricing of the purchased nickel (concentrate, cathode, sinter and others) and the pricing of the final product sold to our clients, hedging transactions were implemented. The items purchased are raw materials utilized to produce refined Nickel. The trades are usually implemented by the sale of nickel forward or future contracts at LME or over-the-counter operations.

Copper Scrap Purchase Protection Program

This program was implemented in order to reduce the cash flow volatility due to the quotation period mismatch between the pricing period of copper scrap purchase and the pricing period of final products sale to the clients, as the copper scrap combined with other raw materials or inputs of Vale's wholly-owned subsidiary, Vale Canada Ltd, to produce copper. This program usually is implemented by the sale of forwards or futures at LME or Over-the-Counter operations.

Bunker Oil Purchase Protection Program

In order to reduce the impact of bunker oil price fluctuation on Vale's freight hiring and consequently reducing the company's cash flow volatility, bunker oil derivatives were implemented. These transactions are usually executed through forward purchases and swaps.

Embedded Derivative Positions

The Company's cash flow is also exposed to several market risks associated to contracts that contain embedded derivatives or derivative-like features. From Vale's perspective, it may include, but is not limited to, commercial contracts, procurement contracts, rental contracts, bonds, insurance policies and loans. The following embedded derivatives were observed in June 30, 2012:

Raw material and intermediate products purchase

Nickel concentrate and raw materials purchase agreements, in which there are provisions based on nickel and copper future prices behavior. These provisions are considered as embedded derivatives.
