- (a) Securities exempt from registration under Rule 144a of the Securities Act of 1933. These securities may be resold in transactions exempt from registration, to Qualified Institutional Investors as defined in Rule 144a promulgated under the Securities Act of 1933, as amended.
- (b) Perpetual Maturity.
- (c) Security exempt from registration under Regulation S of the Securities Act of 1933, which exempts from registration securities offered and sold outside the United States. Security may not be offered or sold in the United States except pursuant to an exemption from, or in a transaction not subject to, the registration requirements of the Securities Act of 1933.
- (d) Defaulted security. Issuer in bankruptcy.
- (e) Non-income producing.
- (f) For fair value measurement disclosure purposes, security is categorized as Level 3.
- (g) Interest rates on Senior Loans may be fixed or may float periodically. On floating rate Senior Loans, the interest rates typically are adjusted based on a base rate plus a premium or spread over the base rate. The base rate usually is a standard inter-bank offered rate, such as a LIBOR, the prime rate offered by one or more major U.S. banks, or the certificate of deposit rate or other base lending rates used by commercial lenders. Floating rate Senior Loans adjust over different time periods, including daily, monthly, quarterly, semi-annually or annually.
- (h) Variable Rate Security. Rate shown is rate in effect at January 31, 2016.
- (i) Amount shown represents less than 0.05% of net assets.

The geographic allocation is based on where Avenue Capital Management II L.P., the Investment Adviser, believes the country of risk to be. Country of risk is traditionally the country where the majority of the company s operations are based or where it is headquartered or where the primary source of revenue risk is determined by the Investment Adviser.

Avenue Income Credit Strategies Fund
Notes to Schedule of Investments
January 31, 2016 (unaudited)
1. Organization
Avenue Income Credit Strategies Fund (the Fund) is a Delaware statutory trust registered under the Investment Company Act of 1940, as amended (the 1940 Act), as a non-diversified, closed-end management investment company. The Fund s primary investment objective is to seek a high level of current income, with a secondary objective of capital appreciation. The Fund commenced operations on January 27, 2011.
2. Significant Accounting Policies
The following is a summary of significant accounting policies of the Fund in preparation of the Schedule of Investments.
SECURITY VALUATION Corporate Bonds and Notes (including convertible and municipal bonds) and unlisted equities are valued using an evaluated quote provided by independent pricing services. Evaluated quotes provided by the pricing services may be determined without exclusive reliance on quoted prices, and may reflect appropriate factors such as institutional-size trading in similar groups of securities, developments related to specific securities, dividend rate, yield, quality, type of issue, coupon rate, maturity, individual trading characteristics and other market data. Short-term debt securities purchased with a remaining maturity of sixty days or less are generally valued at amortized cost, which approximates market value.
Senior Loans are valued using an evaluated quote provided by an independent pricing service. Evaluated quotes provided by the pricing service may be determined without exclusive reliance on quoted prices, and may reflect appropriate factors such as ratings, tranche type, industry, company performance, spread, individual trading characteristics, institutional-size trading in similar groups of securities and other market data.
Credit default swaps are valued using a pricing service, or, if the pricing service does not provide a value, by quotes provided by the selling dealer or financial institution.
Equity securities listed on a U.S. stock exchange, including shares of exchange-traded funds, are valued at the latest quoted sales price on valuation date. Securities listed on a foreign exchange are valued at their closing price.

Forward foreign currency contracts are valued using quoted foreign exchange rates as of the close of the regular trading session on the New York Stock Exchange (NYSE) (generally 4:00 pm Eastern Time) on the days the NYSE is open for business. Foreign securities and currencies are valued in U.S. dollars, based on foreign currency exchange rate quotations supplied by a third party pricing service. If events materially

affecting the price of foreign portfolio securities occur between the time when their price was last determined on such foreign securities exchange or market and the time when the Fund s net asset value was last calculated, such securities may be valued at their fair value as determined in good faith in accordance with procedures established by the Board of Trustees of the Fund (the Board).

Where reliable market quotes are not readily available from a third party pricing service, investments are valued, where possible, using independent market indicators provided by independent pricing sources approved by the Board. Any investment and other assets or liabilities for which current market quotations are not readily available are valued at fair value as determined in good faith in accordance with procedures established by the Board.

SECURITY TRANSACTIONS AND INVESTMENT INCOME Investment transactions for financial statement purposes are accounted for on a trade date basis. Realized gains and losses on investments sold are determined on the basis of identified cost. Interest income is determined on the basis of coupon interest accrued using the effective interest method which adjusts for amortization of premiums and accretion of discounts. For those issuers who are not paying in full, interest is recognized only if amounts are reasonably estimable and (considered to be) collectable. Discounts or premiums on debt securities purchased are accreted or amortized, respectively, to interest income over the lives of the respective securities, subject to collectability. Dividend income and distributions are recorded on ex-dividend date (except for certain foreign dividends which may be recorded as soon as the Fund is informed of such dividend) net of applicable withholding taxes.

Avenue Income Credit Strategies Fund

Notes to Schedule of Investments (continued)

January 31, 2016 (unaudited)

MUNICIPAL BONDS The amount of public information available about municipal bonds is generally less than for corporate equities or bonds, meaning that the investment performance of municipal bond investments may be more dependent on the analytical abilities of the investment adviser than stock or corporate bond investments. The secondary market for municipal bonds also tends to be less well-developed and less liquid than many other securities markets, which may limit an owner s ability to sell its bonds at attractive prices. The spread between the price at which an obligation can be purchased and the price at which it can be sold may widen during periods of market distress. Less liquid obligations can become more difficult to value and be subject to erratic price movements. The increased presence of non-traditional participants or the absence of traditional participants in the municipal markets may lead to greater volatility in the markets.

SENIOR LOANS The Fund purchases assignments of, and participations in, senior secured floating rate and fixed rate loans (Senior Loans) originated, negotiated and structured by a U.S. or foreign commercial bank, insurance company, finance company or other financial institution (the Agent) for a lending syndicate of financial institutions (the Lender). When purchasing an assignment, the Fund typically succeeds to all the rights and obligations under the loan of the assigning Lender and becomes a lender under the credit agreement with respect to the debt obligation purchased. Assignments may, however, be arranged through private negotiations between potential assignees and potential assignors, and the rights and obligations acquired by the purchaser of an assignment may differ from, and be more restricted than, those held by the assigning Lender. A participation typically results in a contractual relationship only with the institution participating out the interest, not with the borrower. In purchasing participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement or any rights of setoff against the borrower, and the Fund may not directly benefit from the collateral supporting the debt obligation in which it has purchased the participation. As a result, the Fund will be exposed to the credit risk of both the borrower and the institution selling the participation.

FOREIGN CURRENCY TRANSLATION Investment valuations, other assets, and liabilities initially expressed in foreign currencies are translated each business day into U.S. dollars based upon current exchange rates. Purchases and sales of foreign investment securities and income and expenses denominated in foreign currencies are translated into U.S. dollars based upon currency exchange rates in effect on the respective dates of such transactions. Recognized gains or losses on investment transactions attributable to changes in foreign currency exchange rates are recorded for financial statement purposes as net realized gains and losses on investments. That portion of unrealized gains and losses on investments that results from fluctuations in foreign currency exchange rates is not separately presented.

FORWARD FOREIGN CURRENCY CONTRACTS The Fund may enter into forward foreign currency contracts for the purchase or sale of a specific foreign currency at a fixed price on a future date. The Fund may enter into such forward contracts for hedging purposes. The forward foreign currency contracts are adjusted by the daily exchange rate of the underlying currency and any gains or losses are recorded as unrealized until such time as the contracts have been closed. Risks may arise upon entering these contracts from the potential inability of counterparties to meet the terms of their contracts and from unanticipated movements in the value of a foreign currency relative to the U.S. dollar. In addition, these contracts may involve market risk in excess of the unrealized appreciation (depreciation) reflected in the Fund s Schedule of Investments. It is the Fund s policy to net the unrealized appreciation and depreciation amounts for the same counterparty.

Currently, the Fund executes all foreign currency contracts through State Street. Due to the Fund s custodial contract with State Street, the Fund is able to avoid certain transaction fees and collateral requirements normally incurred with executing foreign currency contracts with third party brokers. It is the Fund s policy that execution is done through an automated system with transparency as to other market participants and be monitored for best execution purposes.

SHORT SALES The Fund may engage in short sales. A short sale is a transaction in which the Fund sells an instrument that it does not own in anticipation that the market price will decline. To deliver the securities to the buyer, the Fund arranges through a broker to borrow the securities and, in so doing, the Fund becomes obligated to replace the securities borrowed at their market price at the time of replacement.

Avenue Income Credit Strategies Fund

Notes to Schedule of Investments (continued)

January 31, 2016 (unaudited)

When selling short, the Fund intends to replace the securities at a lower price and therefore, profit from the difference between the cost to replace the securities and the proceeds received from the sale of the securities. When the Fund makes a short sale, the proceeds it receives from the sale will be held on behalf of a broker until the Fund replaces the borrowed securities. The Fund may have to pay a premium to borrow the securities and must pay any dividends or interest payable on the securities until they are replaced. The Fund sobligation to replace the securities borrowed in connection with a short sale will be secured by collateral deposited with the broker that consists of cash and/or liquid securities. In addition, the Fund will place in a segregated account an amount of cash and/or liquid securities equal to the difference, if any, between (i) the market value of the securities sold at the time they were sold short, and (ii) any cash and/or liquid securities deposited as collateral with the broker in connection with the short sale. Short sales involve certain risks and special considerations. If the Fund incorrectly predicts that the price of the borrowed security will decline, the Fund will have to replace the securities with securities with a greater value than the amount received from the sale. As a result, losses from short sales differ from losses that could be incurred from a purchase of a security, because losses from short sales may be unlimited, whereas losses from purchases can equal only the total amount invested.

CREDIT DEFAULT SWAPS An over the counter (OTC) credit default swap is an agreement between two parties to exchange the credit risk of a particular issuer or reference entity. Certain types of credit default swaps are exchange-listed and subject to clearing. In a credit default swap transaction, a buyer pays periodic fees in return for payment by the seller which is contingent upon an adverse credit event occurring in the underlying issuer or reference entity. The seller collects periodic fees from the buyer and profits if the credit of the underlying issuer or reference entity remains stable or improves while the swap is outstanding, but the seller in a credit default swap contract would be required to pay an agreed upon amount to the buyer (which may be the entire notional amount of the swap) in the event of a defined adverse credit event with respect to the reference entity. A buyer of a credit default swap is said to buy protection whereas a seller of a credit default swap is said to sell protection. The Fund uses credit default swaps on corporate issuers to provide a measure of protection against defaults of the issuers (i.e., to reduce risk where the Fund owns or has exposure to the referenced obligation) or to take an active long or short position with respect to the likelihood of a particular issuer s default.

Swaps generally do not involve the delivery of securities, other underlying assets or principal. Accordingly, the risk of loss with respect to swaps is limited to the net amount of payments that the Fund is contractually obligated to make. However, because some swap agreements have a leverage component, adverse changes in the value or level of the underlying asset, reference rate, or index, among other factors, can result in a loss substantially greater than the amount invested in the swap itself. If the other party to a swap defaults, the Fund s risk of loss consists of the net amount of payments that the Fund is contractually entitled to receive.

Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end are disclosed in the Schedule of Investments and serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads and increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced entity s credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

The maximum potential amount of future payments (undiscounted) that the Fund as a seller of protection could be required to make under a credit default swap agreement would be an amount equal to the notional amount of the agreement. Notional amounts of all credit default swap agreements outstanding as of January 31, 2016 for which the Fund is a seller of protection are disclosed in the Schedule of Investments. These

potential amounts would be partially offset by any recovery values of the respective referenced obligations, upfront payments received upon entering into the agreement, or net amounts received from the settlement of buy protection credit default swap agreements entered into by the Fund for the same referenced entity or entities.

Avenue Income Credit Strategies Fund

Notes to Schedule of Investments (continued)

January 31, 2016 (unaudited)

OTC swap payments received or made at the beginning of the measurement period are reflected as such and represent payments made or received upon entering into the swap agreement to compensate for differences between the stated terms of the swap agreement and prevailing market conditions (credit spreads, interest rates, and other relevant factors). These upfront payments are amortized to realized gains or losses over the life of the swap or are recorded as realized gains or losses upon termination or maturity of the swap. A liquidation payment received or made at the termination of the swap is recorded as realized gain or loss. Net periodic payments received or paid by the Fund are included as part of realized gains or losses. Changes in market value, if any, are reflected as a component of net changes in unrealized appreciation/depreciation. The Fund segregates assets in the form of cash or liquid securities (i) in an amount equal to the notional amount of the credit default swaps of which it is the seller and; (ii) in an amount equal to any unrealized depreciation of the credit default swaps of which it is the buyer, marked to market on a daily basis.

Certain swap contracts may be centrally cleared (centrally cleared swaps), whereby all payments made or received by the Fund pursuant to the contract are with a central clearing party (CCP) rather than the original counterparty. Central clearing is designed to reduce counterparty risk compared to uncleared swaps because central clearing interposes the CCP as the counterparty to each participant swap, but it does not eliminate those risks completely. For centrally cleared swaps, the daily change in valuation is recorded as a receivable or payable for variation margin and settled in cash with the CCP daily. Upfront payments or receipts, if any, are recorded as Premium paid or received, net for OTC swap contracts, respectively, and amortized over the life of the swap contract as realized gains or losses. For financial reporting purposes, unamortized upfront payments, if any, are netted with unrealized appreciation or depreciation on swap contracts to determine the market value of swaps. Upon entering into centrally cleared swaps, the Fund is required to deposit with the CCP, either in cash or securities, an amount equal to a certain percentage of the notional amount (initial margin), which is subject to adjustment. Credit default swap transactions involve certain risks, including the risk that the seller may be unable to fulfill the transaction.

REPURCHASE AGREEMENTS The Fund may engage in repurchase agreements with broker- dealers, banks and other financial institutions to earn incremental income on temporarily available cash which would otherwise be uninvested. A repurchase agreement is a short-term investment in which the purchaser (i.e., the Fund) acquires ownership of a security and the seller agrees to repurchase the obligation at a future time and set price, thereby determining the yield during the holding period. Such agreements are carried at the contract amount, which is considered to represent fair value. It is the Fund s policy that the value of collateral pledged (the securities received), which consists primarily of U.S. government securities and those of its agencies or instrumentalities, is not less than the repurchase price and is held by the custodian bank for the benefit of the Fund until maturity of the repurchase agreement. Repurchase agreements involve certain risks, including bankruptcy or other default of a seller of a repurchase agreement.

UNFUNDED LOAN COMMITMENTS The Fund may enter into certain credit agreements all or a portion of which may be unfunded. The Fund is obligated to fund these commitments at the borrower s discretion. These commitments are disclosed in the accompanying Schedule of Investments. At January 31, 2016, the Fund had no unfunded loan commitments.

3. Derivative Instruments & Hedging Activities

The Fund is subject to foreign exchange risk in the normal course of pursuing its investment objectives. Because the Fund holds foreign currency denominated investments, the value of these investments and related receivables and payables may change due to future changes in foreign currency exchange rates. To hedge against this risk, the Fund used forward foreign currency contracts. The derivatives are not accounted for as hedging instruments.

At January 31, 2016, the fair value of derivative instruments whose primary underlying risk exposure is foreign exchange risk at January 31, 2016 was as follows:

Avenue Income Credit Strategies Fund

Notes to Schedule of Investments (continued)

January 31, 2016 (unaudited)

		Fair V	/alue		
Derivative	Ass	set Derivative	Lial	Liability Derivative	
Forward foreign currency contracts	\$	1,365,337	\$	(112,976)	

The Fund is subject to credit risk in the normal course of pursuing its investment objectives. The Fund enters into credit default swap contracts to manage its credit risk or to enhance return.

4. Related Party Transactions

Affiliates of the Fund may have lending, brokerage, underwriting, or other business relationships with issuers of securities in which the Fund invests. Morgan Stanley, the global financial services firm, owns an indirect, noncontrolling minority interest in Avenue Capital Group. During the period, the Fund acquired securities in transactions with unaffiliated broker-dealers which were part of underwriting groups in which Morgan Stanley participated.

5. Unrealized Appreciation/(Depreciation)

The cost and unrealized appreciation (depreciation) of investments in securities of the Fund at January 31, 2016, as determined on a federal income tax basis, were as follows:

Aggregate cost of securities held long	\$ 292,991,762
Gross unrealized appreciation	2,346,875
Gross unrealized (depreciation)	(67,333,450)
Net unrealized (depreciation) of investments in securities held long	\$ (64,986,575)
Net unrealized appreciation (depreciation) on short sales	
Net unrealized (depreciation) on securities	\$ (64,986,575)

6. Fair Value Measurements

GAAP defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, under current market conditions. GAAP establishes a hierarchy that prioritizes the inputs to valuation methods giving the highest priority to readily available unadjusted quoted prices in an active market for identical assets (Level 1) and

the lowest priority to significant unobservable inputs (Level 3) generally when market prices are not readily available or are unreliable. Based on the valuation inputs, the securities or other investments are tiered into one of three levels. Changes in valuation methods may result in transfers in or out of an investment sassigned level:

- Level 1 Prices are determined using quoted prices in an active market for identical assets.
- Level 2 Prices are determined using other significant observable inputs. Observable inputs are inputs that other market participants may use in pricing a security. These may include quoted prices for similar securities, interest rates, prepayment speeds, credit risk, yield curves, loss severities, default rates, discount rates, volatilities and others.
- Level 3 Prices are determined using significant unobservable inputs. In situations where quoted prices or observable inputs are unavailable (for example, when there is little or no market activity for an

Avenue Income Credit Strategies Fund

Notes to Schedule of Investments (continued)

January 31, 2016 (unaudited)

investment at the end of the period), unobservable inputs may be used. Unobservable inputs reflect the Fund s own assumptions about the factors market participants would use in determining fair value of the securities or instruments and would be based on the best available information.

The valuation techniques used by the Fund to measure fair value during the period ended January 31, 2016 maximized the use of observable inputs and minimized the use of unobservable inputs.

The following are certain inputs and techniques that the Fund generally uses to evaluate how to classify each major category of assets and liabilities for Level 2 and Level 3, in accordance with GAAP.

Corporate Bonds & Notes Corporate bonds and notes are generally comprised of two main categories: investment grade bonds and high yield bonds. Investment grade bonds are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, active market trading levels, recently executed transactions in securities of the issuer or comparable issuers, and option adjusted spread models that include base curve and spread curve inputs. Adjustments to individual bonds can be applied to recognize trading differences compared to other bonds issued by the same issuer. High yield bonds are valued by independent pricing services based primarily on broker-dealer quotations from relevant market makers and recently executed transactions in securities of the issuer or comparable issuers. To the extent that these inputs are observable, the values of corporate bonds and notes are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Municipal Bonds Municipal bonds are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, active market trading levels, recently executed transactions in securities of the issuer or comparable issuers, and option adjusted spread models that include base curve and spread curve inputs. Adjustments to individual bonds can be applied to recognize trading differences compared to other bonds issued by the same issuer. To the extent that these inputs are observable, the values of municipal bonds are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Senior Loans Senior loans are valued using inputs which include broker-dealer quotes or quotes received from independent pricing services that take into account quotes received from broker-dealers or other market sources pertaining to the issuer or security. The Fund may also engage a third party appraiser or other valuation techniques to value these securities. Inputs may include quoted prices for similar investments in active markets, interest rates, coupon rates, yield curves, option adjusted spreads, default rates, credit spreads and other unique security features in order to estimate the relevant cash flows which is then discounted to calculate fair values. To the extent that these inputs are observable, the values of senior loans are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Credit Default Swaps Credit default swaps are valued by independent pricing services using pricing models that take into account, among other factors, information received from market makers and broker- dealers, default probabilities from index specific credit spread curves, recovery rates, and cash flows. To the extent that these inputs are observable, the values of credit default swaps are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Forward Foreign Currency Contracts Forward foreign currency contracts are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, actual trading information and foreign currency exchange rates gathered from leading market makers and foreign currency exchange trading centers throughout the world. To the extent that these inputs are observable, the values of forward foreign currency contracts are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

The following is a summary of the tiered valuation input levels, as of January 31, 2016. The Schedule of Investments includes disclosure of each security type by category and/or industry. The level assigned to the securities valuations may not be an indication of the risk or liquidity associated with investing in those securities. Because of the inherent uncertainties of valuation, the values reflected in the Schedule of Investments may materially differ from the value received upon actual sale of those investments.

Warrants	222,840	Black Scholes Option	Implied Volatility	45%
		Pricing Model		

The Investment Adviser has established a Valuation Committee (the Committee) which is responsible for overseeing the pricing and valuation of all securities held in the Fund. The Committee operates under pricing and valuation policies and procedures established by the Fund and approved by the Board, including pricing policies which set forth the mechanisms and processes to be employed on a daily basis to implement these policies and procedures. In particular, the pricing policies describe how to determine market quotations for securities and other instruments. The Committee s responsibilities include: 1) fair value and liquidity determinations (and oversight of any third parties to whom any responsibility for fair value and liquidity determinations is delegated), and 2) regular monitoring of the Fund s pricing and valuation policies and procedures and modification or enhancement of these policies and procedures (or recommendation of the modification of these policies and

procedures) as the Committee believes appropriate. The Committee is also responsible for monitoring the implementation of the pricing policies by the Fund and third parties which perform certain pricing functions in accordance with the pricing policies. The Investment Adviser is responsible for the oversight of the third party on a day-to-day basis. The Committee and the Investment Adviser perform a series of activities to provide reasonable assurance of the accuracy of prices including: 1) periodic vendor due diligence meetings, review of methodologies, new developments and processes at vendors, 2) daily comparison of security valuation versus prior day for all securities that exceeded established thresholds, and 3) daily review of unpriced, stale, and variance reports with exceptions reviewed by the Committee.

Transfers are reflected at the value of the securities at the beginning of the period. Transfers from Level 2 to Level 3 were due to a decrease in the availability of significant observable inputs in determining the fair value of these investments.

For information related to geographical and industry categorization of investments and types of derivative contracts held, please refer to the Schedule of Investments.

Item 2. Controls and Procedures.

(a) The registrant s principal executive officer and principal financial officer have concluded that the registrant s disclosure controls and procedures (as defined in Rule 30a-3(c) under the Investment Company Act of 1940, as amended (the 1940 Act)) are effective as of a date within 90 days prior to the filing date of this report, based on the evaluation of these controls and procedures required by Rule 30a-3(b) under the 1940 Act and Rule 13a-15(b) or 15d-15(b) under the Securities Exchange Act of 1934, as amended.

(b) There were no changes in the registrant s internal control over financial reporting (as defined in Rule 30a-3(d) under the 1940 Act) that occurred during the registrant s last fiscal quarter that has materially affected, or is reasonably likely to materially affect, the registrant s internal control over financial reporting.

Item 3. Exhibits.

Certifications of the principal executive officer and principal financial officer of the registrant as required by Rule 30a-2(a) under the 1940 Act are attached hereto as Exhibit 99CERT.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934 and the Investment Company Act of 1940, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.
