Breakeven Analysis (page 8)

This supplement replaces the breakeven analysis table and related footnotes with the following:

Breakeven Analysis

The breakeven analysis below indicates the approximate dollar returns and percentage required for the redemption value of a hypothetical investment in a single unit to equal the amount invested twelve months after the investment was made. For purposes of this breakeven analysis, we have assumed an initial selling price per unit of \$76.57, which equals the net asset value per unit on November 30, 2011. This breakeven analysis refers to the redemption of baskets by Authorized Purchasers and is not related to any gains an individual investor would have to achieve in order to break even. The breakeven analysis is an approximation only.

Assumed initial selling price per unit	\$ 76.57
Management Fee (0.750%) ¹	\$ 0.57
Creation Basket Fee ²	\$ (0.01)
Estimated Brokerage Fee (0.037%) ³	\$ 0.03
Interest Income (0.010%) ⁴	\$ (0.01)
Independent Directors and Officers Fees	\$ 0.01
Fees and expenses associated with tax accounting and reporting ⁶	\$ 0.07
Amount of trading income (loss) required for the redemption value at the end of one year to equal the initial selling price of the unit	\$ 0.66
Percentage of initial selling price per unit	\$ 0.86%

¹ USBO is contractually obligated to pay the General Partner a management fee based on daily net assets and paid monthly of 0.750% per annum on average net assets.

² Authorized Purchasers are required to pay a Creation or Redemption Basket fee of \$350 for each order they place to create or redeem one or more baskets. An order must be at least one basket, which is 100,000 units. This breakeven analysis assumes a hypothetical investment in a single unit so the Creation Basket fee is \$.01 (\$350 /100,000).

³ This amount is based on the actual brokerage fees for USBO calculated on an annualized basis.

⁴ USBO earns interest on funds it deposits with the futures commission merchant and the custodian and it estimates that the interest rate will be 0.010% based on the current interest rate on three-month Treasury Bills as of November 30, 2011. The actual rate may vary.

⁵ The foregoing assumes that the assets of USBO are aggregated with those of USOF, USNG, US12OF, UGA, USHO, USSO and US12NG, that the aggregate fees paid to the independent directors was \$501,466, that the allocable portion of the fees borne by USBO equals \$4,357 and that USBO has \$76,574,921 in assets, which is the amount of assets as of November 30, 2011.

⁶ USBO estimates the aggregate costs attributable to tax accounting and reporting for 2011 was \$75,000. The number in the break-even table assumes USBO has \$76,574,921 in assets which is the amount of assets as of November 30, 2011.

The table below shows the relationship between the trading prices of the units of USBO and each of the Related Public Funds and the daily NAV of such fund, since inception through November 30, 2011. The first row shows the average amount of the variation between the Related Public Fund's closing market price and NAV, computed on a daily basis since inception, while the second and third rows depict the maximum daily amount of the end of day premiums and discounts to NAV since inception, on a percentage basis. Management of the General Partner believes that maximum and minimum end of day premiums and discounts typically occur because trading in the units continues on the NYSE Arca until 4:00 p.m. New York time while regular trading in the benchmark futures contract on the NYMEX ceases at 2:30 p.m. New York time and the value of the relevant benchmark futures contract, for purposes of determining its end of day NAV, can be determined at that time. One known exception to this conclusion were the premiums on trading in USNG units that occurred between July 8, 2009 and September 28, 2009, when USNG suspended the issuance of Creation Baskets as a result of regulatory concern relating to the size of USNG's positions in the natural gas futures and cleared swap markets, and there was continued demand for such units and other similar natural gas futures linked investments in the market.

** Partial from June 2, 2010.

*** Through November 30, 2011

Worst Peak-to-Valley Draw-down: The largest percentage decline in the NAV per unit over the history of the fund. This need not be a continuous decline, but can be a series of positive and negative returns where the negative returns are larger than the positive returns. Worst Peak-to-Valley Draw-down represents the greatest percentage decline from any month-end NAV per unit that occurs without such month-end NAV per unit being equaled or exceeded as of a subsequent month-end. For example, if the NAV per unit declined by \$1 in each of January and February, increased by \$1 in March and declined again by \$2 in April, a peak-to-valley drawdown analysis conducted as of the end of April would consider that drawdown to be still continuing and to be \$3 in amount, whereas if the NAV per unit had increased by \$2 in March, the January February drawdown would have ended as of the end of February at the \$2 level.
