Management's Discussion of Funds Performance (audited)**Economic Environment**

Over the year ended August 31, 2013, the global economy expanded, but growth remained uneven. Developed market growth accelerated, but remained at low levels. Emerging markets continued to grow at a faster rate than developed markets, but their pace moderated and disappointed relative to expectations. As a result of earlier stimulus efforts enacted by the European Central Bank (ECB), Bank of England (BoE), and Federal Reserve (Fed), economic projections continued to be revised upward. Unemployment data in the United States generally continued to improve, albeit below Fed targets. In December, Shinzo Abe's Liberal Democratic Party won a landslide victory in Japan on an economic reform agenda. Their efforts to stimulate the economy through quantitative easing had significant impacts not only on their domestic economy, but exchange rates around the world (particularly in Asia). The confluence of a moderation in the pace of Chinese economic growth, positive economic momentum within the U.S., and the potential for reduction in quantitative easing by the Federal Reserve dominated investor perceptions regarding the global economy. In early March, Chinese officials announced that they would be revising the official state growth target from 8% to 7.5%. Concerns about this moderation in growth from China cast a cloud over investor sentiment for the broader emerging markets. At the same time, investors were encouraged by better than expected economic and earnings data from the United States. In late March, a 10 billion bailout was announced for Cyprus to help recapitalize their banking system. Markets were concerned that allowing even a small country like Cyprus to exit the monetary union would set a potentially destabilizing precedent for a dissolution of the Eurozone. Economic data released in April showed that Chinese economic growth had slowed to 7.7%. In May, the ECB cut interest rates to help stimulate the European economy. Also in May, Fed Chairman Ben Bernanke announced that it may be necessary for the Federal Open Market Committee to reduce the pace of asset purchases in the coming months. With the possibility that the United States could be the first major economy to reduce economic stimulus, investors grappled with what impact this could have on emerging markets. Countries that were perceived to have higher levels of external vulnerability came under scrutiny. From May onward, U.S. interest rates grinded higher and the U.S. dollar strengthened against a majority of its trading partners. In response, central banks in Brazil, India, and Indonesia raised interest rates in an effort to combat weakening currencies and reduce inflationary pressures. Better than expected gross domestic product (GDP) growth in August from Germany and France lifted the Eurozone out of recession for the first time in one and a half years. Even so, broad-based economic growth in Europe is still proving difficult. The fiscal year closed with markets focusing on upcoming central bank announcements in the U.S., Britain, and Europe in September.

Foreign Exchange and Fixed Income Markets

Investors with broad based exposures to emerging market currencies and fixed income and similar investments tied to commodity-producing countries faced a difficult market environment during the fiscal year ended August 31, 2013. Performance through the end of 2012 was fairly strong as markets focused on stimulus from developed market central banks and an improving outlook for global growth. Markets that were notable underperformers during the previous year rebounded sharply to start 2013 on improving sentiment. Market participants cheered the election of Shinzo Abe on his bold economic reform agenda. As a result of quantitative easing measures initiated by the Bank of Japan, the yen weakened significantly relative to the U.S. dollar peaking at over 103 on May 17, 2013. With investors seeking income around the world, yields in both developed and emerging markets bottomed in early May. As economic data from developed markets continued to beat expectations, a marked gap continued to develop between emerging market and developed market returns. Near the end of May, the unintended impact of Chairman Bernanke's tapering comments sparked a pronounced rise in interest rates in the United States as well as in emerging markets. The United States 10-year bond went from a yield of 1.62% to a high of 2.89% in approximately three months. Emerging

Management's Discussion of Funds Performance (audited) (continued)

markets were not immune to this move. Through a combination of yield curve steepening and central bank interest rate hikes, yields on emerging market fixed income rose in excess of the backup in domestic yields to levels not seen since early 2011. In addition to rising interest rates, foreign currency denominated fixed income was negatively impacted by a broad-based appreciation of the U.S. dollar relative to foreign currencies. Credit spreads in emerging market fixed income widened during this period as the perception of risk increased along with the rise in nominal yields. Over the course of the fiscal year, the Chinese yuan, Polish zloty, and South Korean won were the only emerging currencies to appreciate against the U.S. dollar. Markets focused on selling currencies with greater perceived external vulnerabilities. Notable underperformers included the South African rand, Indian rupee, Indonesian rupiah, and Brazilian real. The euro gained over 5% during this period whereas the Japanese yen depreciated by roughly 20% against the U.S. dollar. While many emerging market central banks cut interest rates early in the fiscal year, many central banks in emerging markets raised interest rates to quell concerns about inflation and also to stem losses from their currencies. Central banks that increased rates over the period were Brazil, Indonesia, and India. As central bankers increased short-term interest rates, the value of longer dated bonds declined leading to losses for investors. Interest rates around the world approached multi-year highs to close the fiscal year ended August 31, 2013.

Fixed Income and Currency Funds Performance

For the fiscal year ended August 31, 2013, 2 out of 11 Currency and Fixed Income Funds outperformed their respective performance benchmarks based on net asset value (NAV) or, in the case of the **Global Corporate Bond Fund**, since its inception on January 31, 2013.

Fixed Income Funds

Income was significantly offset by currency weakness and principal losses for the **Emerging Markets Local Debt Fund**'s return of -6.41% based on NAV for the fiscal year. Over the year, rising bond yields across most emerging market countries caused a drag on overall Fund performance. The losses accelerated in May through the end of the fiscal year due to comments made by Federal Reserve Chairman Ben Bernanke regarding the future tapering of asset purchases. Among the country exposures, currency losses in South Africa, Brazil, Indonesia, and Turkey significantly detracted from performance. Bonds denominated in Chinese yuan, Polish zloty, and South Korean won were the only positive contributor to Fund performance. The Fund underperformed its industry reference benchmark, the JP Morgan GBI-EM Global Diversified Index, which returned -5.38% versus the Fund's return of -6.41% based on NAV for the fiscal year. The Fund's underperformance can be attributed to an overweight to Asia that decreased income potential relative to the index.

Interest rate cuts in Australia were unable to counterbalance losses from currency declines that contributed to the **Asia Local Debt Fund**'s return of -5.14% based on NAV for the fiscal year. The Indian rupee accounted for the greatest currency decline whereas the Chinese yuan appreciated over 3% as the Fund's strongest performer. Concerns about slowing growth in China weighed on market sentiment and asset returns in the region. Aggressive interest rate cuts in Australia boosted bond returns, but also weakened the Australian dollar. The Indian rupee depreciated to all-time lows over the period causing a drag on Fund returns. The Fund underperformed its industry reference benchmark, the HSBC Asian Local Bond Index, which declined -3.82% versus the Fund's return of -5.14% based on NAV for the fiscal year. The Fund's underperformance can be attributed to the Fund's exposure to Australia. The shorter duration of the Fund relative to the index also produced a lower yield. As central banks cut interest rates in Asia, longer duration securities outperformed shorter duration securities given their greater sensitivity to interest rates (as interest rates decline, bond prices increase).

Management's Discussion of Funds Performance (audited) (continued)

The **Euro Debt Fund** seeks to achieve a high level of total return consisting of both income and capital appreciation through investments in debt securities denominated in euros. The Fund is actively managed and it utilizes the BofA Merrill Lynch Euro Government Index as its benchmark. The BofA Merrill Lynch Euro Government Index is a market capitalization weighted index that tracks the performance of euro-denominated sovereign debt publicly issued by Euro member countries. The Fund underperformed its reference benchmark, which returned 9.55% versus the Fund's return of 4.37% based on NAV for the fiscal year. The Fund's underperformance can be attributed to a lack of exposure to Portugal, Italy, Ireland, and Spain, which performed well over the period.

The **Australia & New Zealand Debt Fund** seeks to achieve a high level of total return consisting of both income and capital appreciation through investments in debt securities denominated in Australian or New Zealand dollars. The Fund employs a structured approach in balancing its investments between debt of sovereign and semi-government issuers (local, state, and territory governments of Australia) within the two countries and the debt of supranational and other agencies (for example, developmental organizations such as the World Bank or International Monetary Fund) in these countries. Country and sector exposures are rebalanced back to target weighting quarterly. The Fund is actively managed and it utilizes the Citigroup Australian Broad Investment-Grade Bond Index as its benchmark. The Citigroup Australian Broad Investment-Grade Index is a market capitalization weighted index designed to represent the Australian fixed-coupon bond market, including government, semi-government, and investment grade credit markets (including supranational issuers). The Fund outperformed its reference benchmark, which returned -11.87% versus the Fund's return of -11.42% based on NAV for the fiscal year. This was the result of the Fund's larger investments in New Zealand dollar denominated bonds than the industry benchmark.

The **Emerging Markets Corporate Bond Fund** seeks to achieve a high level of total return consisting of both income and capital appreciation through investments in the debt of emerging markets corporate issuers. While the Fund is actively managed, it utilizes the JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad as a guideline for investment performance. The JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad is a market capitalization weighted index consisting of U.S. dollar-denominated emerging market corporate bonds. The index serves as a global corporate benchmark representing Asia, Latin America, Europe and Middle East/Africa. U.S. dollar-denominated corporate issues from index eligible countries are narrowed further by only including issues with more than \$300 million current face outstanding and at least five years to maturity (at the time of inclusion into the index). It is a commonly used benchmark by many mutual funds and separate accounts investing in the asset class. The Fund underperformed its reference benchmark, which returned -0.51% versus the Fund's return of -2.00% based on NAV for the fiscal year. This was the result of the Fund's investments in Metals & Mining and Oil & Gas sectors that underperformed.

On January 31, 2013, the **Global Corporate Bond Fund** was launched. The Fund seeks to achieve a high level of total return consisting of both income and capital appreciation through investments in the debt of corporate entities that are organized in or maintain their principal place of business in countries throughout the world, including the U.S. While the Fund is actively managed, it utilizes the Barclays Global Credit Index (Hedged) as its benchmark. The Barclays Global Credit Index (Hedged) contains investment-grade and high-yield credit securities from the Barclays Multiverse Index, which is a broad-based measure of the global fixed-income bond market. The Barclays Multiverse Index is the union of the Barclays Global Aggregate Index and the Barclays Global High Yield Index and captures investment grade and high yield securities in all eligible currencies. The Barclays Multiverse Index family includes a wide range of standard and customized subindices by sector, quality, maturity, and country. For the period January 31, 2013 through August 31, 2013, the Fund underperformed its reference benchmark, which returned -0.93% versus the Fund's return of -0.98% based on NAV. This was the result of the Fund's overweight in investments in global high yield bonds.

Management's Discussion of Funds Performance (audited) (concluded)**Currency Funds**

Income return was a strong driver of fund performance over the last year. Many countries' currencies depreciated versus the U.S. dollar as risk aversion dominated much of the fiscal year. During periods of risk aversion, many investors seek the safety of developed market currencies such as the U.S. dollar. Among the single currency funds for the fiscal year, all three funds produced total returns based on NAV which exceeded the change in value of the underlying currency by more than 1.5% (see pages 5 to 9 herein for a discussion of standardized performance for each Fund). Of the weakest performing single currency funds, the **Brazilian Real Fund** and the **Indian Rupee Fund**, generated total returns for the fiscal year that were significantly greater than the underlying change in the spot return of the currency. Spot currency returns represent the change in foreign exchange rates versus the U.S. dollar available for immediate delivery. The Brazilian Real Fund fell -10.53% for the fiscal year based on NAV, outperforming the -14.65% depreciation in the Brazilian real versus the U.S. dollar. The Indian Rupee Fund declined -11.77% in value for the fiscal year based on NAV, while the Indian rupee declined by -16.64%. The **Chinese Yuan Fund**, which returned 4.78% for the fiscal year based on NAV, boosted relative performance versus the Chinese yuan through investments made in Chinese time deposits and forwards, outperforming the spot return of 2.87%. The **Emerging Currency Fund** posted a -3.30% return over the fiscal year, underperforming its industry benchmark, the JP Morgan Emerging Local Markets Index Plus which returned -2.55%. The currencies of South Africa, India, Brazil, Indonesia, and Turkey depreciated by more than 10% against the U.S. dollar over the period. Index allocations to Hong Kong, Taiwan, and Singapore (which did not depreciate as much against the U.S. dollar), helped dampen index losses. The **Commodity Currency Fund** declined by -5.97% over the fiscal year, outperforming its industry benchmark, the Barclays Commodity Producers Currency Index (CPCI-6) which returned -7.61%. This outperformance was largely the result of the Fund's allocation to the Chilean peso and New Zealand dollar. All commodity currencies depreciated against the U.S. dollar as concerns about commodity demand weighed on prices. The currencies of Brazil, Australia, and South Africa depreciated by more than 10% against the U.S. dollar over the period.

Alternative Funds

The **Managed Futures Strategy Fund** posted a 1.09% return based on NAV over the fiscal year, underperforming its industry benchmark, the Diversified Trends Indicator, by 1.19%. This was primarily due to deductions for Fund expenses and transaction costs. As the Fund uses a trend-following strategy, volatility and lack of sustained market trends dampened Fund performance through the beginning of December. However, two notable periods of sustained trends from December through mid-February and mid-June to early July contributed to overall positive Fund performance. Currency markets, particularly in Japan, accounted for a substantial portion of Fund returns for the fiscal year. Shinzo Abe's Liberal Democratic Party won elections in Japan on the back of an economic reform agenda that began a sustained, albeit volatile, depreciation of the Japanese yen against the U.S. dollar. Many commodity futures declined by a significant amount during the fiscal year. After a year marked by reduced supplies on account of a broad-based drought across much of the United States, more normal conditions resulted in a decline of approximately 25% in futures prices for corn and wheat for the fiscal year ended August 31, 2013. Precious metals such as silver and gold also corrected sharply as the perception of risk declined in a majority of markets around the world. Energy futures such as crude oil and gasoline ended the fiscal year higher by approximately 10% on account of continued unrest in the Middle East. Lack of a clear trend in natural gas futures resulted in the largest drag on overall fund performance for the fiscal year. The announcement by Federal Reserve (Fed) Chairman Ben Bernanke that the Fed may begin to reduce the pace of its asset purchase program also caused a sharp decline in Treasury futures that also weighed on Fund performance. The **Global Real Return Fund** posted a -5.25% return over the fiscal year, underperforming its industry benchmark, the BofA Merrill Lynch Global Diversified Inflation-Linked Index, which returned -4.12%. This underperformance is largely due to losses from the Fund's positions in commodity strategies which underperformed in volatile markets.

Performance Summary (unaudited)

WisdomTree Brazilian Real Fund (BZF)

(formerly, *WisdomTree Dreyfus Brazilian Real Fund*)

Investment Breakdown

as of 8/31/13

Fully collateralized by U.S. Government agency securities.

The WisdomTree Brazilian Real Fund (the Fund) seeks to achieve total returns reflective of both money market rates in Brazil available to foreign investors and changes in value of the Brazilian real relative to the U.S. dollar. The Brazilian real is a developing market currency, which can experience periods of significant volatility. Although the Fund invests in very short-term, investment grade instruments, the Fund is not a money market fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -10.53% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund outperformed the change in the spot currency rate by 4.12% based on NAV for the fiscal year. This was largely due to the Fund's investments in U.S. money market instruments and forward currency contracts.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the

Edgar Filing: WisdomTree Trust - Form N-CSR

Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 1, 2013, the Fund's annual expense ratio was 0.45%.**

Performance as of 8/31/13

	Average Annual Total Return			Since Inception ¹
	1 Year	3 Year	5 Year

The WisdomTree Commodity Currency Fund (the "Fund") seeks to achieve total returns reflective of money market rates in selected commodity-producing countries and changes in value of such countries' currencies relative to the U.S. dollar. The term "commodity currency" generally is used to describe the currency of a country whose economic success is commonly identified with the production and export of commodities (such as precious metals, oil, agricultural products or other raw materials) and whose value is closely linked to the value of such commodities. The Fund intends to invest in commodity-producing countries, such as Australia, Brazil, Canada, Chile, Colombia, Indonesia, Malaysia, New Zealand, Norway, Peru, Russia and South Africa. This list may change based on market developments. Although this Fund invests in very short-term, investment grade instruments, the Fund is not a "money market" fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -5.97% on net asset value ("NAV") for the year ended August 31, 2013 (for more complete performance information please see below). The Fund outperformed its benchmark, the Barclays Commodity Producers Currency Index, by 1.64% based on NAV for the fiscal year. This outperformance was largely the result of the Fund's allocation to the Chilean peso and New Zealand dollar.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange

Edgar Filing: WisdomTree Trust - Form N-CSR

where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 1, 2013, the Fund's annual expense ratio was 0.55%.**

Performance as of 8/31/13

	Average Annual Total Return	
	1 Year	Since Inception ¹
Fund NAV Returns	-5.97%	-0.54%
Fund Market Price Returns	-6.31%	-0.66%
<i>Barclays Commodity Producers Currency Index</i>	-7.61%	-2.00%
<i>Equal-Weighted Commodity Currency Composite</i>	-5.31%	0.21%

¹ Total returns are calculated based on the commencement of Fund trading on the NYSE Arca on September 24, 2010.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and the principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at www.wisdomtree.com. WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Fund NAV returns are calculated using the Fund's daily 4:00 p.m. NAV. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times. The returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or on the redemption of Fund shares. Total returns for a period of less than one year are cumulative.

The WisdomTree Emerging Currency Fund (the "Fund") seeks to achieve total returns reflective of both money market rates in selected emerging market countries available to foreign investors and changes to the value of these currencies relative to the U.S. dollar. Emerging market currencies can experience periods of significant volatility. Although the Fund invests in short-term, investment grade instruments, the Fund is not a money market fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -3.30% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the JP Morgan Emerging Local Markets Index Plus, by 0.75% based on NAV for the fiscal year. This was largely due to the Fund's underweight in Hong Kong and Singapore relative to the benchmark.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. The WisdomTree Indian Rupee Fund (the Fund) seeks to achieve total returns reflective of both money market rates in India available to foreign investors and changes in value of the Indian rupee relative to the U.S. dollar. The Indian rupee is a developing market currency, which can experience periods of significant volatility. Although the Fund invests in very short-term, investment grade instruments, the Fund is not a money market fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -11.77% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund outperformed the change in the spot currency rate by 4.87% based on NAV for the fiscal year. This was the result of the Fund's investments in U.S. money market instruments and forward currency contracts.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. The WisdomTree Asia Local Debt Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in fixed income instruments denominated in the currencies of a broad range of Asian countries.

The Fund returned -5.14% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the HSBC Asian Local Bond Index, by 1.32% based on NAV for the fiscal year. This was the result of the Fund's investments in Australian dollar denominated bonds that significantly underperformed during the fiscal year.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. Edgar Filing: WisdomTree Trust - Form N-CSR

The WisdomTree Emerging Markets Corporate Bond Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in debt securities issued by corporate entities that are domiciled in, or economically tied to, emerging market countries.

The Fund returned -2.00% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad, by 1.49% based on NAV for the fiscal year. This was the result of the Fund's overweight to investments in emerging market corporate bonds in the Metals & Mining and Oil & Gas sectors.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 1, 2013, the Fund's annual expense ratio was 0.60%.**

* The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes investment of cash collateral for securities on loan (if any).

Fully collateralized by U.S. Government agency securities.

The WisdomTree Emerging Markets Local Debt Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in fixed income instruments denominated in the local currencies of emerging market countries.

The Fund returned -6.41% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the JP Morgan Government Bond Index Emerging Markets (GBI-EM) Global Diversified Index, by 1.03% based on NAV for the fiscal year. This was the result of the Fund's overweight to investments in Asia relative to the index.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 1, 2013, the Fund's annual expense ratio was 0.55%.**

Performance as of 8/31/13

	Average Annual Total Return		
	Since		
	1 Year	3 Year	Inception¹
Fund NAV Returns	-6.41%	1.28%	1.16%
Fund Market Price Returns	-7.51%	0.76%	0.67%
<i>JP Morgan GBI-EM Global Diversified Index</i>	-5.38%	2.28%	1.91%

¹ Total returns are calculated based on the commencement of Fund trading on the NYSE Arca on August 9, 2010.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and the principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at www.wisdomtree.com. WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Fund NAV returns are calculated using the Fund's daily 4:00 p.m. NAV. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times. The returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or on the redemption of Fund shares. Total returns for a period of less than one year are cumulative.

The WisdomTree Euro Debt Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in fixed income instruments denominated in euros.

Edgar Filing: WisdomTree Trust - Form N-CSR

The Fund returned 4.37% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the BofA Merrill Lynch Euro Government Index, by 5.18% based on NAV for the fiscal year. This was a result of the Fund's lack of exposure to debt from Portugal, Italy, Ireland, and Spain.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 1, 2013, the Fund's annual expense ratio was 0.35%.**

*The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes investment of cash collateral for securities on loan (if any).

The WisdomTree Global Corporate Bond Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund seeks to achieve its investment objective through investment in debt securities issued by corporate entities that are organized in or maintain their principal place of business in countries throughout the world, including the U.S. The issuers of such debt will include public, private, and state-owned or sponsored corporations.

The Fund returned -0.98% on net asset value (NAV) since its inception on January 31, 2013 through August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the Barclays Global Credit Index (Hedged), by 0.05% based on NAV for the period. This was the result of the Fund's overweight in investments in global high yield bonds.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 11, 2013, the Fund's net and gross annual expense ratios were 0.45% and 0.50%, respectively. WisdomTree Asset Management, Inc. has contractually agreed to limit the Management Fee to 0.45% through January 10, 2014.**

The WisdomTree Global Real Return Fund (the Fund) seeks total returns (capital appreciation plus income) that exceed the rate of inflation over long-term investment horizons.

Edgar Filing: WisdomTree Trust - Form N-CSR

The Fund returned -5.25% on net asset value (NAV) for the fiscal year ended August 31, 2013 (for more complete performance information please see below). The Fund underperformed its industry benchmark, the BofA Merrill Lynch Global Diversified Inflation-Linked Index by 1.13% based on NAV for the fiscal year. This underperformance is largely due to losses from the Fund's positions in commodity strategies which underperformed in volatile markets.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for fund shares and investors' assessments of the underlying value of a fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns also do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated January 1, 2013, and as supplemented September 26, 2013, the Fund's annual expense ratio was 0.66%.**

Description of Terms and Indexes (unaudited)

Below are descriptions of certain terms and of each index referenced in this report.

Barclays Commodity Producers Currency Index:

The Barclays Commodity Producers Currency Index (CPCI-6) tracks the performance of long positions in the equally weighted six commodity currencies versus the U.S. dollar, expressed through one-month cash settled forward rate agreements. The six commodity currencies included in CPCI-6 are the Australian dollar, Brazilian real, Canadian dollar, Norwegian krone, Russian ruble, and South African rand. These currencies are selected to represent six resource rich economies, diversified in terms of geography, major commodities items exported and across developed and emerging economies.

Barclays Global Credit Index (Hedged):

The Barclays Global Credit Index (Hedged) contains investment-grade and high-yield credit securities from the Barclays Multiverse Index, which is a broad-based measure of the global fixed-income bond market. The Barclays Multiverse Index is the union of the Barclays Global Aggregate Index and the Barclays Global High Yield Index and captures investment grade and high yield securities in all eligible currencies. The Barclays Multiverse Index family includes a wide range of standard and customized subindices by sector, quality, maturity, and country.

BofA Merrill Lynch Euro Currency One-Month LIBID Constant Maturity Index:

The BofA Merrill Lynch Euro Currency One-Month LIBID Constant Maturity Index tracks a consistent investment in one-month euro-denominated bank deposits.

BofA Merrill Lynch Euro Government ex-Greece, Ireland, Italy, Portugal & Spain Index:

The BofA Merrill Lynch Euro Government ex-Greece, Ireland, Italy, Portugal & Spain Index is a subset of the BofA Merrill Lynch Euro Government Index. It is a market capitalization-weighted index that tracks the performance of euro-denominated sovereign debt publicly issued by Euro member countries excluding Greece, Ireland, Italy, Portugal and Spain as the country of risk.

BofA Merrill Lynch Euro Government Index:

The BofA Merrill Lynch Euro Government Index is a market capitalization-weighted index that tracks the performance of euro-denominated sovereign debt publicly issued by Euro member countries.

BofA Merrill Lynch Global Diversified Inflation-Linked Index:

The BofA Merrill Lynch Global Diversified Inflation-Linked Index is a broad, market value-weighted, capped total return index designed to measure the performance of inflation-linked sovereign debt that is publicly issued and denominated in the issuer's own domestic market and currency.

BofA Merrill Lynch New Zealand Dollar One-Month LIBID Constant Maturity Index:

The BofA Merrill Lynch New Zealand Dollar One-Month LIBID Constant Maturity Index tracks a consistent investment in one-month New Zealand dollar-denominated bank deposits.

Description of Terms and Indexes (unaudited) (continued)

Citigroup Australian Broad Investment-Grade Bond Index:

The Citigroup Australian Broad Investment-Grade Bond Index is a market capitalization weighted index designed to represent the Australian fixed-coupon bond market, including government, semi-government, and investment grade credit markets (including supranational issuers).

Diversified Trends Indicator:

The Diversified Trends Indicator (DTI) is a long/short rules-based index that consists of ten commodity sectors and eight financial sectors. Each month the DTI Index sector exposure is rebalanced back to the fixed weights, 50% physical commodities and 50% financials (when energy is long) and approximately 40% commodities and 60% financials (when energy is flat). Each sector (other than the energy sector) is positioned either long or short depending on the current market environment (the energy sector is positioned as either long or flat (i.e., no exposure)). The DTI Index individual market components, sectors and related weightings, as well as other aspects of the calculation of the DTI Index, are subject to change at any time.

Equal-Weighted Commodity Currency Composite:

A composite incorporating equal-weighted exposures to the currencies within the Commodity Currency Fund was constructed as a benchmark for Fund performance. Returns for the individual emerging market currencies are represented by the return of the country subindices of the JP Morgan Emerging Local Markets Index Plus (ELMI+). Returns for the individual developed market countries are represented by the returns of the BofA Merrill Lynch One-Month Constant Maturity LIBID Index for each country. The JP Morgan indices use a weighted basket of one-month, two-month and three-month currency forwards collateralized with U.S. money market rates to proxy the returns for emerging currency positions. The BofA Merrill Lynch indices track a consistent investment in one-month bank deposits denominated in the specified currency. Within the composite, currency exposures are rebalanced back to equal-weight at the end of the month in which the Fund rebalances its portfolio. Changes to currencies within the Fund are reflected in the composite at the end of the month they are added to, or deleted from, the Fund.

Equal-Weighted Emerging Currency Composite:

A composite incorporating equal-weighted exposure to the currencies within the Emerging Currency Fund was constructed as an additional gauge of Emerging Currency Fund performance. Currently, the composite tracks the returns for the currencies of the following countries: Brazil, Chile, Mexico, Poland, Indonesia, South Africa, Turkey, India, China, Russia and South Korea, using the total returns of the country subindices of the JP Morgan Emerging Local Markets Index Plus (ELMI+). Each subindex uses a weighted basket of one-month, two-month and three-month currency forwards (deliverable or nondeliverable) collateralized with U.S. money market rates to proxy the total returns of an investment in local-currency money market instruments. Currency exposures are rebalanced back to equal-weighting at the end of the month in which the Emerging Currency Fund intends to rebalance, and currency changes are reflected in the composite at the end of the month they are reflected in the Fund.

Euro Zone Area:

The area encompassing the European Union Member States whose currency is the euro and in which there is a single monetary policy. It currently comprises Belgium, Germany, Greece, Spain, Estonia, Ireland, France, Italy, Cyprus, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland.

Description of Terms and Indexes (unaudited) (continued)

Forward Currency Contracts:

A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A forward contract may either be deliverable or non-deliverable. A **deliverable forward currency contract** is an agreement by two parties to transact in currencies at a specific rate on a future date upon which each party delivers the promised currency. A **non-deliverable forward currency contract** is an agreement by two parties to transact in currencies at a specific rate on a future date and then cash settle the agreement with a simple exchange of the market value difference between the current market rate and the initial agreed-upon rate.

Global Corporate Composite (Hedged):

The Global Corporate Composite (Hedged) consists of a blend of 75% Barclays Global Aggregate Corporate Index Hedged USD and 25% Barclays Global High Yield Index Hedged USD. The Barclays Global Aggregate Index provides a broad-based measure of the global investment grade fixed-rate debt markets. The Barclays Global High-Yield Index provides a broad-based measure of the global high-yield fixed income markets.

Gross Domestic Product (GDP)

Gross domestic product is the value of all final goods and services produced in a specific country. It is the broadest measure of economic activity and the principal indicator of economic performance.

HSBC Asian Local Bond Index:

The HSBC Asian Local Bond Index (ALBI) tracks the total return performance of a bond portfolio which consists of local currency denominated, high quality and liquid bonds in Asia ex-Japan. The ALBI includes bonds from the following countries: Korea, Hong Kong, India, Singapore, Taiwan, Malaysia, Thailand, the Philippines, Indonesia and China.

JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad:

The JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad is a market capitalization weighted index consisting of U.S. dollar-denominated emerging market corporate bonds. The index serves as a global corporate benchmark representing Asia, Latin America, Europe and Middle East/Africa. U.S. dollar-denominated corporate issues from index-eligible countries are narrowed further by only including issues with more than \$300 million current face outstanding and at least five years to maturity (at the time of inclusion into the index).

JP Morgan Emerging Local Markets Index Plus (ELMI+):

The JP Morgan Emerging Local Markets Index Plus (ELMI+) and its underlying country and regional subindices track the total returns for local-currency denominated money market instruments in emerging market countries.

JP Morgan Emerging Local Markets Index Plus (ELMI+) Brazil:

The Brazil subindex uses a weighted basket of one-month, two-month and three-month currency forwards collateralized with U.S. money market rates to proxy the total returns of an investment in Brazilian real money market instruments. The returns are reported in U.S. dollar terms.

JP Morgan Emerging Local Markets Index Plus (ELMI+) China:

The China subindex uses a weighted basket of one-month, two-month and three-month currency forwards collateralized with U.S. money market rates to proxy the total returns of an investment in Chinese yuan money market instruments. The returns are reported in U.S. dollar terms.

Description of Terms and Indexes (unaudited) (continued)

JP Morgan Emerging Local Markets Index Plus (ELMI+) India:

The India subindex uses a weighted basket of one-month, two-month and three-month currency forwards collateralized with U.S. money market rates to proxy the total returns of an investment in Indian rupee money market instruments. The returns are reported in U.S. dollar terms.

JP Morgan Government Bond Index-Emerging Markets (GBI-EM) Global Diversified Index:

The JP Morgan Government Bond Index-Emerging Markets (GBI-EM) Global Diversified Index tracks the performance of local currency debt issued by emerging market governments, whose debt is accessible by most of the international investor base. The index incorporates a constrained market-capitalization methodology in which individual issuer exposures are capped at 10% (with the excess distributed to smaller issuers) for greater diversification among issuing governments. The returns are reported in U.S. dollar terms.

JP Morgan New Zealand Government Bond Index:

The JP Morgan New Zealand Government Bond Index is a market capitalization weighted index of locally denominated, fixed rate government debt.

LIBID:

London Interbank Bid Rate or the rate at which banks are willing to borrow for a discrete period of time.

Sovereign Debt:

Debt that is the direct obligation of a government issuer.

Spliced Australia & New Zealand Debt Composite:

A spliced index which tracks the BofA Merrill Lynch New Zealand Dollar One-Month LIBID Constant Maturity Index through October 24, 2011. Thereafter, the composite tracks an 80%/20% weighted exposure to the local currency bond markets of Australia and New Zealand, respectively. Performance for Australia is proxied by the total returns of the Citigroup Australian Broad Investment-Grade Bond Index. Performance for the New Zealand bond market is proxied by the JP Morgan New Zealand Government Bond Index. Country exposures are rebalanced back to target weighting quarterly.

Spliced Euro Debt Composite:

A spliced index which tracks the BofA Merrill Lynch Euro Currency One-Month LIBID Constant Maturity Index through October 18, 2011. Thereafter, the composite tracks the BofA Merrill Lynch Euro Government Index.

Spliced Euro Debt ex-Greece, Ireland, Italy, Portugal & Spain Composite:

A spliced index which tracks the BofA Merrill Lynch Euro Currency One-Month LIBID Constant Maturity Index through October 18, 2011. Thereafter, the composite tracks the BofA Merrill Lynch Euro Government ex-Greece, Ireland, Italy, Portugal & Spain Index.

Description of Terms and Indexes (unaudited) (concluded)

Spot Rate:

A spot rate is the foreign exchange market price at which a currency will be delivered on the settlement date. Spot rate is the starting point for all foreign exchange transactions. The **Brazilian real** spot return rate relative to the U.S. Dollar calculated by WisdomTree is the rate of return percentage difference between the end of period spot rate and the beginning of period spot rate using WM/Reuters London closing rates. The **Chinese yuan** and **Indian rupee** spot return rate relative to the U.S. Dollar calculated by WisdomTree is the rate of return percentage difference between the end of period spot rate and the beginning of period spot rate using Tullett Prebon Singapore closing rates.

Index returns do not reflect expenses paid by the Funds. Index returns assume reinvestment of distributions. It is not possible to invest directly in an index.

Shareholder Expense Examples (unaudited)

As a shareholder of a WisdomTree Fund, you incur two types of costs: (1) transaction costs, including brokerage commissions on purchases and sales of your Fund shares and (2) ongoing costs, including management fees and other Fund expenses. The following example is intended to help you understand your ongoing costs (in dollars and cents) of investing in a Fund and to compare these costs with the ongoing costs of investing in other funds.

The example is based on an investment of \$1,000 invested at the beginning of the period and held for the entire period from March 1, 2013 to August 31, 2013.

Actual expenses

The first line under each Fund in the table on the next page provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by \$1,000 (for example, an \$8,600 account value divided by \$1,000 = 8.6), then multiply the result by the number in the first line for your Fund under the heading entitled *Expenses Paid During the Period 3/1/13 to 8/31/13* to estimate the expenses you paid on your account during this period.

Hypothetical example for comparison purposes

The second line under each Fund in the table on the next page provides information about hypothetical account values and hypothetical expenses based on each Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in your Fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any transactional costs, such as brokerage commissions paid on purchases and sales of Fund shares. Therefore, the second line under each Fund in the table is useful in comparing ongoing Fund costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.
