## **Global High Income Fund Inc.:**

### **Managed distribution policy key points to note**

The Fund has a managed distribution policy (the Policy). Effective June 2015, the Fund makes regular monthly distributions at an annualized rate equal to 9% of the Fund's net asset value, as determined as of the last trading day during the first week of a month (usually a Friday, unless the NYSE is closed that day). (From June 2014 through the monthly distribution for May 2015, the annualized rate had been 6% (which, consistent with the Policy, in any given month may have been comprised of a combination of net investment income, short- and/or long-term capital gains, and/or a return of capital)).

On May 20, 2015, the Fund issued a press release announcing that its Board had increased the annualized rate of the Fund's monthly distribution from 6% to 9%, effective with the June 2015 monthly distribution. The Fund's Board intends to maintain the 9% annualized distribution rate until at least June 2016 absent unforeseen circumstances. However, the Fund's Board reserves its right to change that distribution rate or to change or terminate the Policy at any time without prior notice to Fund shareholders should the Board determine that to do so would be in the best interests of the Fund in light of unforeseen, changed circumstances from those that prevailed when the 9% annualized distribution rate was adopted in May 2015. Any such change or termination may have an adverse effect on the market price for the Fund's shares and would be announced in a press release.

The Fund's Board believed that the increased rate was appropriate based upon the recommendation of UBS Global Asset Management (Americas) Inc., (UBS Global AM), the Fund's investment advisor, and in light of its ongoing consideration of efforts to reduce the discount to underlying net asset value at which the Fund's shares recently had traded as of May 2015. Historically, UBS Global AM and the Board had sought to maintain distribution rates that were more closely aligned with the Fund's expected earnings. In recent years, however, a general decline in prevailing bond yields and narrowing of spreads have reduced the Fund's earnings levels, which resulted in reductions of the monthly distribution rate, which may have contributed to the discount at which the Fund's shares have traded. UBS Global AM believes that increasing the annualized distribution rate may help to reduce the Fund's trading discount.

In approving the increased distribution rate, the Fund's Board has effectively de-linked the Fund's managed distribution payments from the level of anticipated Fund earnings. To the extent that the aggregate amount distributed by the Fund under the Policy exceeds its current and accumulated earnings and profits, which is an expected result of the increase discussed above, the amount of that excess would constitute a return of capital or net realized capital gains for tax purposes. A return of capital may occur, for example, when some or all of the money that shareholders invested in the Fund is deemed to be paid back to them. A return of capital distribution does not reflect the Fund's investment performance and should not be confused with yield or income. Of course, if the Fund's earnings and profits in any fiscal year should exceed the aggregate amount distributed under the Policy, no return of capital to the Fund's shareholders would occur, and the Fund would make an additional distribution in the amount of that excess near the end of the fiscal year.

You should not draw any conclusions about the Fund's investment performance from the amount of the monthly distribution or from the terms of the Fund's Policy.

## Edgar Filing: GLOBAL HIGH INCOME FUND INC - Form N-CSRS

The Fund periodically issues notices and press releases estimating the source characteristics of its monthly distributions. The estimated amounts and sources reported in these materials are only estimates and are not being provided for tax reporting purposes. The actual amounts and sources of the amounts for accounting and tax reporting purposes will depend upon the Fund's investment experience during its entire fiscal year and may be subject to retroactive changes based on tax regulations. The Fund will send you a Form 1099-DIV (or your financial intermediary should provide you with similar information) for the calendar year that will tell you how to report these distributions for federal income tax purposes.

Further information regarding the Fund's Policy is contained in the section captioned "Distribution policy" towards the end of this report.

Global High Income Fund Inc.

June 12, 2015

**Dear shareholder,**

We present you with the semiannual report for Global High Income Fund Inc. (the Fund) for the six months ended April 30, 2015 (the reporting period).

*Please note that in May 2015, the Fund changed its managed distribution policy. Please see the inside front cover of this report (facing page) for important information about this change.*

**Performance**

For the six months ended April 30, 2015, the Fund declined 4.34% on a net asset value basis and 3.80% on a market price basis. In comparison, the Fund's benchmark, the Global High Income Fund Index (the Index), declined 3.84%. Over the same period, the Fund's Lipper Emerging Markets Hard Currency Debt Funds peer group median fell 2.98% on a net asset value basis and 2.34% on a market price basis. (For more performance information, including a description of the Index, please refer to Performance at a glance on page 5.)

The Fund did not use structural leverage during the reporting period. That is, the Fund did not have preferred stock outstanding or borrow from banks for investment purposes, as some of its peers may have done. Leverage magnifies returns on both the upside and on the downside and creates a wider range of returns within the Fund's peer group.

On the last trading day of the preceding fiscal year, which ended October 31, 2014, the Fund traded at a discount of 13.1%. At the close of the current reporting period, April 30, 2015, the Fund also traded at a discount of 13.1%. As of the same dates, the Lipper peer group reported median discounts of 12.2% and 11.7%, respectively.

A fund trades at a discount when the market price at which its shares trade is less than its NAV per share. Alternatively, a fund trades at a premium when the market price at which its shares trade is more than its NAV per share. The market price is the price the market is willing to pay for shares of a fund at a given time, and may be influenced by a range of factors, including supply and demand, and market conditions. NAV per share is determined by dividing the value of the Fund's securities, cash and other assets, less all liabilities, by the total number of common shares outstanding.

**Market commentary**

The emerging markets debt asset class experienced periods of volatility during the reporting period. The asset class was weak during the first half of the period given a sharp decline in the price of oil, the ongoing conflict between

<sup>1</sup> The Global High Income Fund Index is an unmanaged index compiled by UBS Global Asset Management (Americas) Inc. constructed as follows: from the Fund's inception until 12/31/93: 100% J.P. Morgan Emerging Markets Bond Index (EMBI); from 01/01/94 to 11/05/06: 100% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global); from 11/06/06 to 03/31/08: 70% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) and 30% J.P. Morgan Government Bond Index-Emerging Markets Diversified (GBI-EM Diversified); from 04/01/08 to 05/31/08: 50% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) and 50% J.P. Morgan Government Bond Index-Emerging Markets Diversified (GBI-EM Diversified); from 06/01/08 to present: 50% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) and 50% J.P. Morgan Government Bond Index-Emerging Markets Global Diversified (GBI-EM Global Diversified). Investors should note that indices do not reflect the deduction of fees and expenses.

Global High Income Fund Inc.

Russia and Ukraine, and fears of a default in Venezuela. Against this backdrop, investor risk aversion was elevated at times and emerging markets debt spreads widened, peaking in January 2015.<sup>2</sup> However, the asset class then rallied over the second half of the period. This turnaround was triggered by stabilizing oil prices, expectations for improving growth in the US and increased investor risk appetite, especially for oil exporting countries and US dollar-denominated debt.

During the six months ended April 30, 2015, US dollar-denominated emerging markets debt, as measured by the JP Morgan Emerging Markets Bond Index Global (EMBI Global),<sup>3</sup> gained 0.70%. Local market investments (emerging markets debt denominated in the currency of the issuer) declined 8.24%, as measured in US dollars by the JP Morgan Government Bond Index-Emerging Markets Global Diversified (GBI-EM Global Diversified).<sup>4</sup> Local debt generated weak results, as many emerging markets currencies fell sharply versus the US dollar.

### **Portfolio commentary**

#### **What worked**

**The Fund's exposure to oil exporting countries during the second half of the reporting period was additive for performance.** In particular, the Fund's positions in Russia and Venezuela were beneficial for results, as their spreads narrowed during the second half of the period given improving oil prices.

**An underweight to Ukrainian US dollar-denominated debt was beneficial for results.** The Fund's underweight was rewarded given the country's deteriorating economic backdrop and the increasing likelihood of a debt restructuring.

**The Fund's increased exposure in US dollar-denominated debt, especially during the second half of the period, contributed to performance.** In particular, the Fund's overweight positions in Mexico, Dominican Republic, Costa Rica and Columbia were positive for results.

**An overweight to Indian local debt enhanced the Fund's results.** India's local debt performed relatively well as market sentiment for the country was generally positive given expectations for meaningful reforms and improving growth.

**The Fund's underweight to the Brazilian real contributed to performance.** The real depreciated versus the US dollar given weak growth and elevated inflation in the country.

Overall, the Fund's reduced allocation to local debt was additive for performance.

#### **What didn't work**

**The Fund's exposure to oil exporting countries during the first half of the reporting period was negative for results.** The Fund's positions in a number of oil exporting countries detracted from performance, as they were negatively impacted by the declining price of oil. In particular, the Fund's allocation to Russian quasi-sovereigns performed poorly, despite a rebound toward the end of the reporting period.

- <sup>2</sup> Spread is the difference between the yields paid on a government bond (such as US Treasuries) and a security of a different quality, but with the same or similar maturity. When spreads widen, it implies the market is factoring in greater risk of default for the lower rated security; conversely, when spreads tighten, the market is factoring in less risk. Such movements in spreads generally result in changes in market prices for such securities.
- <sup>3</sup> The J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) is an unmanaged index which is designed to track total returns for US dollar-denominated debt instruments issued by emerging market sovereign and quasi-sovereign entities: Brady bonds, loans and Eurobonds. Investors should note that indices do not reflect the deduction of fees and expenses.
- <sup>4</sup> The J.P. Morgan Government Bond Index-Emerging Markets Global Diversified (GBI-EM Global Diversified) is an unmanaged index which is designed to track total returns for local currency debt instruments issued by emerging market governments. Investors should note that indices do not reflect the deduction of fees and expenses.
- <sup>5</sup> Quasi-sovereign bonds are securities issued by entities supported by the local government.

Global High Income Fund Inc.

**Duration positioning was a headwind for the Fund's performance.** We tactically adjusted the Fund's duration, but had a shorter position versus that of the Index. This negatively impacted results as intermediate- and longer-term US Treasury yields declined during the reporting period. (Duration measures a fund's sensitivity to changes in interest rates and is related to the maturity of the bonds comprising the portfolio.)

**The Fund's overweight to Brazilian US dollar-denominated debt was negative for results.** In particular, an overweight to Petrobras, a semi-public Brazilian multinational energy company, hurt the Fund's performance. Petrobras debt was negatively impacted by a widening corruption scandal.

### **Portfolio adjustments**

**Several adjustments were made to the portfolio during the reporting period.**

We reduced the Fund's local currency and local debt positions and increased its allocation to US dollar-denominated debt.

During the sell-off in December 2014, we added to several positions in higher yielding countries that had become more attractively valued. This included the Fund's holdings in Belarus, Mongolia, Sri Lanka and Venezuela.

### **Use of derivatives**

**The Fund continued to utilize a number of instruments to manage its overall currency exposure.** Currency forwards were among the most commonly used derivative instruments. (A currency forward is an agreement between two parties to exchange a certain amount in currencies at a certain rate at a future date.) During the reporting period, the Fund's overall currency management strategy contributed to results.

**The Fund used various types of credit-related instruments to manage its credit risk across emerging markets.** Credit default swaps (a type of credit derivative) and credit linked notes (notes structured to provide exposure to an underlying bond or asset) were utilized to adjust the Fund's exposure to the debt of certain emerging markets countries. Whereas credit default swaps were generally used to adjust the Fund's US dollar-denominated debt exposure, the other instruments were employed almost exclusively to gain access to various local markets. The overall management of US dollar-denominated assets, including credit derivatives, contributed to performance, as did the Fund's local bond market exposure.

**The Fund utilized interest rate-related derivative instruments, including, but not limited to, futures and swaps.** Overall, duration and yield curve management detracted from performance during the reporting period.

### **Outlook**

Recent economic data show that US GDP growth was negative in the first quarter of 2015. We believe this was partially due to severe winter weather in parts of the country. In our view, the US economy should gain some momentum as the year progresses. That said, we do not expect to see robust growth given continued slack in areas of the economy, generally weak growth overseas and the impact from the stronger US dollar. We believe that the Fed will likely start raising interest rates later in 2015, but that its approach to policy normalization should be very gradual.

Turning to the fixed income market, the potential for higher interest rates is a headwind for bond prices. However, we do not expect to see a sharp rise in rates given the global economic environment and the cautious Fed. We believe credit fundamentals are generally sound, with large cash balances on many corporate balance sheets and low default rates. We are keeping a close eye on market technicals, as investor demand could be challenged at times given numerous geopolitical issues and if the Fed takes a more aggressive stance in terms of interest rate hikes.

Global High Income Fund Inc.

While global growth is recovering slowly, emerging economies are still lagging, but we feel that growth could be bolstered by increasing exports. A stable oil price and more supportive demand for commodities in general could be a first indication for improving growth in emerging economies. In addition, emerging markets currencies have depreciated in recent months, and this makes products from developing countries more attractive on a relative basis. This could also be supportive for emerging markets countries, as long as their central banks remain on hold in terms of raising interest rates. In our view, inflation is relatively benign overall and, as such, we do not expect to see policy tightening in the near term.

However, we recognize that some emerging markets countries still show a lower level of economic activity and further downward revisions to growth cannot be ruled out. In addition, we believe that political uncertainty will

keep volatility high for the time being and will impact investors' confidence. That said, current spread levels, together with an improving fundamental outlook, should be attractive for the emerging markets debt asset class.

We thank you for your continued support and welcome any comments or questions you may have. For additional information regarding your fund, please contact your financial advisor, or visit us at [www.ubs.com/globalam-us](http://www.ubs.com/globalam-us).

<sup>1</sup> Prices and other characteristics will vary over time.

- <sup>2</sup> Duration is a measure of price sensitivity of a fixed income investment or portfolio (expressed as % change in price) to a 1 percentage point (i.e., 100 basis points) change in interest rates, accounting for optionality in bonds such as prepayment risk and call/put features.
- <sup>3</sup> Breakdown represents a percentage of market value as of dates indicated. Forward foreign currency contracts are reflected at unrealized appreciation/depreciation; this may not align with the risk exposure described in the portfolio commentary section of the preceding shareholder letter which reflects forward foreign currency contracts based on contract notional amount. As of the most recent period end, April 30, 2015, the Fund maintained a risk exposure to non-U.S. dollar currencies equal to approximately 52% of the Fund.
- <sup>4</sup> Weightings represent percentage of net assets as of the dates indicated. The Fund's portfolio is actively managed and its composition will vary over time.
- <sup>5</sup> Weightings represent percentages of net assets as of the dates indicated. The Fund's portfolio is actively managed and its composition will vary over time. Credit quality ratings shown are based on those assigned by Standard & Poor's Financial Services LLC, a part of McGraw-Hill Financial (S&P), to individual portfolio holdings. S&P is an independent ratings agency. Ratings reflected represent S&P individual debt issue credit ratings. While S&P may provide a credit rating for a bond issuer (e.g., a specific company or country); certain issues, such as some sovereign debt, may not be covered or rated and therefore are reflected as non-rated for the purposes of this table. Credit ratings range from AAA, being the highest, to D, being the lowest, based on S&P's measures; ratings of BBB or higher are considered to be investment grade quality. Unrated securities do not necessarily indicate low quality. Further information regarding S&P's rating methodology may be found on its website at [www.standardandpoors.com](http://www.standardandpoors.com). Please note that references to credit quality made in the commentary above may reflect ratings based on multiple providers (not just S&P) and thus may not align with the data represented in this table. S&P credit ratings were identified and selected for use in the credit quality table included above given their coverage of the asset class in which the Fund invests.

At April 30, 2015, there were no transfers between Level 1 and Level 2.

### Portfolio footnotes

- <sup>1</sup> Security exempt from registration pursuant to Rule 144A under the Securities Act of 1933. These securities are considered liquid, unless noted otherwise, and may be resold in transactions exempt from registration, normally to qualified institutional buyers. At April 30, 2015, the value of these securities amounted to \$37,492,842 or 16.80% of net assets.
- <sup>2</sup> Security exempt from registration pursuant to Regulation S under the Securities Act of 1933. Regulation S applies to securities offerings that are made outside of the United States and do not involve direct selling efforts in the United States. At April 30, 2015, the value of these securities amounted to \$55,894,687 or 25.05% of net assets.
- <sup>3</sup> Variable or floating rate security The interest rate shown is the current rate as of April 30, 2015 and changes periodically.
- <sup>4</sup> Security pays, when required, a floating rate that is determined annually based on the Argentina GDP.
- <sup>5</sup> Security is in default.
- <sup>6</sup> Debt security whose principal and/or interest payments are adjusted for inflation, unlike debt securities that make fixed principal and interest payments. The interest rate paid by the securities is fixed, while the principal value rises or falls based on changes in an index. Thus, if inflation occurs, the principal and interest payments on the securities are adjusted accordingly to protect investors from inflationary loss. During a deflationary period, the principal and interest payments decrease, although the securities principal amounts will not drop below their face amounts at maturity. In exchange for the inflation protection, the securities generally pay lower interest rates than typical government securities from the issuer's country. Only if inflation occurs will securities offer a higher real yield than a conventional security of the same maturity.

Edgar Filing: GLOBAL HIGH INCOME FUND INC - Form N-CSRS

- <sup>7</sup> Rate shown reflects annualized yield at April 30, 2015 on zero coupon bond.
- <sup>8</sup> Step bond Coupon rate increases in increments to maturity. Rate disclosed is as of April 30, 2015. Maturity date disclosed is the ultimate maturity date.
- <sup>9</sup> The table below details the Fund's investment in a fund advised by the same Advisor as the Fund. The Advisor does not earn a management fee from the affiliated UBS Relationship Fund.

<b>Security description</b>	<b>Value 10/31/14</b>	<b>Purchases during the six months ended 04/30/15</b>	<b>Sales during the six months ended 04/30/15</b>	<b>Value 04/30/15</b>	<b>Net income earned from affiliate for the six months ended 04/30/15</b>
UBS Cash Management Prime Relationship Fund	\$ 6,240,018	\$ 25,314,724	\$ 26,748,992	\$ 4,805,750	\$ 1,714

- <sup>10</sup> Illiquid investment as of April 30, 2015.
- <sup>11</sup> Payments made or received are based on the notional amount.
- <sup>12</sup> If the Fund is a buyer of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) receive from the seller of protection an amount equal to the notional amount of the swap and deliver the referenced obligation or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap agreement less the recovery value of the referenced obligation or underlying securities comprising the referenced index.
- <sup>13</sup> Payments from/to the counterparty will be received/made upon the occurrence of bankruptcy and/or restructuring event with respect to the referenced index/obligation.

Global High Income Fund Inc.

Portfolio of investments April 30, 2015

(unaudited)

- <sup>14</sup> If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap agreement less the recovery value of the referenced obligation.
- <sup>15</sup> Credit spreads, represented in absolute terms, utilized in determining the market value as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default or other credit event occurring for the credit derivative. The credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity's credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement. A credit spread identified as "Defaulted" indicates a credit event has occurred for the referenced entity.

Portfolio turnover rate	24%	45%	42%	52%	71%	84%
-------------------------	-----	-----	-----	-----	-----	-----

<sup>1</sup> Calculated using the average shares method.

<sup>2</sup> The actual sources of the Fund's fiscal year 2015 dividends/distributions may be net investment income, net realized capital gains, return of capital or a combination of the foregoing and may be subject to retroactive recharacterization at the end of the Fund's fiscal year based on tax regulations. Shareholders will be informed of the tax characteristics of dividends/distributions after the close of the 2015 fiscal year.

<sup>3</sup> Total net asset value return is calculated assuming a \$10,000 purchase of common stock at the current net asset value on the first day of each period reported and a sale at the current net asset value on the last day of each period reported, and assuming reinvestment of dividends and other distributions at the net asset value on the payable dates. Total net asset value return does not reflect the deduction of taxes that a shareholder would pay on Fund dividends/distributions or a sale of Fund shares. Total return based on net asset value is hypothetical as investors cannot purchase or sell Fund shares at the net asset value but only at market prices. Total net asset value return for the period of less than one year has not been annualized.

<sup>4</sup> Total market price return is calculated assuming a \$10,000 purchase of common stock at the current market price on the first day of each period reported and a sale at the current market price on the last day of each period reported, and assuming reinvestment of dividends and other distributions at prices obtained under the Fund's Dividend Reinvestment Plan. Total market price return does not reflect brokerage commissions or the deduction of taxes that a shareholder would pay on Fund dividends/distributions or a sale of Fund shares. Total market price return for the period of less than one year has not been annualized.

<sup>5</sup> Annualized.

Global High Income Fund Inc.

## Notes to financial statements

(unaudited)

### Organization and significant accounting policies

Global High Income Fund Inc. (the Fund) was incorporated in Maryland on February 23, 1993 and is registered with the US Securities and Exchange Commission (SEC) as a closed-end, non-diversified management investment company. The Fund's primary investment objective is to achieve a high level of current income. As a secondary objective the Fund seeks capital appreciation, to the extent consistent with its primary objective.

In the normal course of business, the Fund enters into contracts that contain a variety of representations that provide general indemnification for certain liabilities. The Fund's maximum exposure under these arrangements is unknown, as this would involve future claims that may be made against the Fund that have not yet occurred. However, the Fund has not had prior claims or losses pursuant to these contracts and expects the risk of loss to be remote.

The Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) is the exclusive reference of authoritative US generally accepted accounting principles (US GAAP) recognized by the FASB to be applied by nongovernmental entities. Rules and interpretive releases of the SEC under authority of federal laws are also sources of authoritative US GAAP for SEC registrants. The Fund's financial statements are prepared in accordance with US GAAP, which may require the use of management estimates and assumptions. Actual results could differ from those estimates. The following is a summary of significant accounting policies:

### Valuation of investments

The Fund calculates its net asset value based on the current market value, where available, for its portfolio of securities. The Fund normally obtains market values for its investments from independent pricing sources and broker-dealers. Independent pricing sources may use reported last sale prices, official market closing prices, current market quotations or valuations from computerized evaluation systems that derive values based on comparable investments. An evaluation system incorporates parameters such as security quality, maturity and coupon, and/or research and evaluations by its staff, including review of broker-dealer market price quotations, if available, in determining the valuation of the portfolio investments. Investments also may be valued based on appraisals derived from information concerning the investment or similar investments received from recognized dealers in those holdings. Investments traded in the over-the-counter (OTC) market and listed on The NASDAQ Stock Market, Inc. (NASDAQ) normally are valued at the NASDAQ Official Closing Price. Other OTC securities are valued at the last bid price on the valuation date available prior to valuation. Investments which are listed on US and foreign stock exchanges normally are valued at the market closing price, the last sale price on the day the securities are valued or, lacking any sales on such day, at the last available bid price. Investments listed on foreign stock exchanges may be fair valued based on significant events that have occurred subsequent to the close of the foreign markets. In cases where investments are traded on more than one exchange, the investments are valued on the exchange designated as the primary market by UBS Global Asset Management (Americas) Inc. (UBS Global AM or the Advisor), the investment advisor of the Fund. UBS Global AM is an indirect asset management subsidiary of UBS Group AG. UBS Group AG is an internationally diversified organization with headquarters in Zurich, Switzerland. UBS Group AG operates in many areas of the financial services industry. If a market value is not readily available from an independent pricing source for a particular investment, that investment is valued at fair value determined in good faith by or under the direction of the Fund's Board of Directors (the Board). Various factors may be reviewed in order to

make a good faith determination of an investment's fair value. These factors include, but are not limited to, fundamental analytical data relating to the investment; the nature and duration of restrictions on disposition of the investments; and the evaluation of forces which influence the market in which the investments are purchased and sold. Foreign currency exchange rates are generally determined as of the close of the New York Stock Exchange ( NYSE ).

Certain investments in which the Fund invests are traded in markets that close before 4:00 p.m., Eastern time. Normally, developments that occur between the close of the foreign markets and 4:00 p.m., Eastern time, will

Global High Income Fund Inc.

Notes to financial statements

(unaudited)

not be reflected in the Fund's net asset value. However, if the Fund determines that such developments are so significant that they will materially affect the value of the Fund's investments, the Fund may adjust the previous closing prices to reflect what is believed to be the fair value of these investments as of 4:00 p.m., Eastern time.

The amortized cost method of valuation, which approximates market value, generally is used to value short-term debt instruments with sixty days or less remaining to maturity, unless the Board determines that this does not represent fair value. Investments in open-end investment companies are valued at the daily closing net asset value of the respective investment company. Pursuant to the Fund's use of the practical expedient within ASC Topic 820, investments in non-registered investment companies are also valued at the daily net asset value. All investments quoted in foreign currencies are valued daily in US dollars on the basis of the foreign currency exchange rates prevailing at the time such valuation is determined by the Fund's custodian and accounting agent.

Futures contracts are generally valued at the settlement price established each day on the exchange on which they are traded. Forward foreign currency contracts are valued daily using forward exchange rates quoted by independent pricing services.

Swaps are marked-to-market daily based upon values from third party vendors or quotations from market makers to the extent available, and the change in value, if any, is recorded as an unrealized gain or loss on the Statement of assets and liabilities. In the event that market quotations are not readily available or deemed unreliable, the swap is valued at fair value as determined in good faith by or under the direction of the Board (or a committee designated by it).

The Board has delegated to the UBS Global Asset Management Global Valuation Committee ( GVC ) the responsibility for making fair value determinations with respect to the Fund's portfolio holdings. The GVC is comprised of representatives of management, including members of the investment team.

The GVC provides reports to the Board at each quarterly meeting regarding any investments that have been fair valued, valued pursuant to standing instructions approved by the GVC, or where non-vendor pricing sources had been used to make fair value determinations when sufficient information exists during the prior quarter. Fair valuation determinations are subject to review at least monthly by the GVC during scheduled meetings. Pricing decisions, processes, and controls over fair value determinations are subject to internal and external reviews, including annual internal compliance reviews and periodic internal audit reviews of security valuations.

The types of investments for which such fair value pricing may be necessary include, but are not limited to: foreign investments under some circumstances; securities of an issuer that has entered into a restructuring; investments whose trading has been halted or suspended; fixed income securities that are in default and for which there is no current market value quotation; and investments that are restricted as to transfer or resale. The need to fair value the Fund's portfolio investments may also result from low trading volume in foreign markets or thinly traded domestic investments, and when a security that is subject to a trading limit or collar on the exchange or market on which it is primarily traded reaches the limit up or limit down price and no trading has taken place at that price. Various factors may be reviewed in order to make a good faith determination of an investment's fair value. These factors include, but are not limited to, fundamental analytical data relating to the investment; the nature and duration of restrictions on

disposition of investments; and the evaluation of forces which influence the market in which the investments are purchased and sold. Valuing investments at fair value involves greater reliance on judgment than valuing investments that have readily available market quotations. Fair value determinations can also involve reliance on quantitative models employed by a fair value pricing service.

Global High Income Fund Inc.

Notes to financial statements

(unaudited)

US GAAP requires disclosure regarding the various inputs that are used in determining the value of the Fund's investments. These inputs are summarized into the three broad levels listed below:

Level 1 Unadjusted quoted prices in active markets for identical investments.

Level 2 Other significant observable inputs, including but not limited to, quoted prices for similar investments, interest rates, prepayment speeds and credit risk.

Level 3 Unobservable inputs inclusive of the Fund's own assumptions in determining the fair value of investments.

A fair value hierarchy has been included near the end of the Fund's Portfolio of investments.

The provisions of ASC Topic 815 Derivatives and Hedging (ASC Topic 815) require qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts of gains and losses on derivative instruments and disclosures about credit-risk related contingent features in derivative agreements. Since investment companies value their derivatives at fair value and recognize changes in fair value through the Statement of operations, they do not qualify for hedge accounting under ASC Topic 815. Accordingly, even though the Fund's investments in derivatives may represent economic hedges, they are considered to be non-hedge transactions for purposes of disclosure under ASC Topic 815. ASC Topic 815 requires that (1) objectives for using derivative instruments be disclosed in terms of underlying risk and accounting designation, (2) the fair values of derivative instruments and their gains and losses be disclosed in a tabular format, and (3) information be disclosed about credit-risk contingent features of derivatives contracts. Details of this disclosure can be found below as well as in the Portfolio of investments. Swap agreements, forward foreign currency contracts, swaptions and options written entered into by the Fund may contain credit-risk related contingent features that could be triggered subject to certain circumstances. Such circumstances include agreed upon net asset value thresholds. If triggered, the derivative counterparty could request additional cash margin and/or terminate the derivative contract. The aggregate fair value of the derivative contracts that are in a net liability position that contain these triggers can be found in the Portfolio of investments. The aggregate fair value of assets that are already posted as collateral as of April 30, 2015 is reflected in the Statement of assets and liabilities. If the applicable credit-risk related contingent features were triggered as of April 30, 2015, the Fund would be required to post additional collateral or may be required to terminate the contracts and settle any amounts outstanding. The volume of derivatives that is presented in the Portfolio of investments of the Fund is consistent with the derivative activity during the period ended April 30, 2015. The Fund may be a seller of protection through credit default swap agreements which are by nature credit-risk contingent (the terms of these agreements can be found within the Portfolio of investments, with further discussion in the Notes to financial statements).

Disclosure of derivatives by underlying risk as of and for the period ended April 30, 2015 is as follows:

**Asset derivatives**

<b>Credit risk</b>	<b>Foreign</b>	<b>Total</b>
