Limitations on Enforcement of US Laws against Prudential plc, its Management and Others

Prudential plc is a public limited company incorporated and registered in England and Wales. Most of its directors and executive officers are resident outside the United States, and a substantial portion of its assets and the assets of such persons are located outside the United States. As a result, it may be difficult for you to effect service of process within the United States upon these persons or to enforce against them or Prudential plc in US courts judgements obtained in US courts predicated upon the civil liability provisions of the federal securities laws of the United States. We believe that there may be doubt as to the enforceability in England and Wales, in original actions or in actions for enforcement of judgements of US courts, of liabilities predicated solely upon the federal securities laws of the United States.

Selected Historical Financial Information of Prudential

The following table sets forth Prudential s selected consolidated financial data for the periods indicated. Certain data is derived from Prudential s consolidated financial statements prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and as endorsed by the European Union (EU). EU-endorsed IFRS may differ from IFRS as issued by the IASB if, at any point in time, new or amended IFRSs have not been endorsed by the EU. As at 30 June 2017, there were no unendorsed standards effective for the periods presented below which impact the consolidated financial information of Prudential and there were no differences between IFRSs endorsed by the EU and IFRSs issued by the IASB in terms of their application to Prudential. Accordingly, the selected consolidated financial data presented below is derived from Prudential s consolidated financial statements prepared in accordance with IFRS as issued by the IASB. This table is only a summary and should be read in conjunction with Prudential s unaudited condensed consolidated interim financial statements and the related notes included in this document, together with the Summary of Operating and Financial Review and Prospects section below.

New business:			
Single premium sales ⁽³⁾	22,071	16,984	13,755
New regular premium sales ⁽³⁾⁽⁴⁾	2,503	1,926	1,604
Funds under management	825,053	634,900	562,300

- (1) Amounts stated in US dollars in the half year 2017 column have been translated from pounds sterling at the rate of \$1.2995 per £1.00 (the noon buying rate in New York City on 30 June 2017).
- (2) This measure is the formal profit before tax measure under IFRS but is not the result attributable to shareholders.
- (3) The new business premiums in the table shown above are provided as an indicative volume measure of transactions undertaken in the reporting period that have the potential to generate profits for shareholders (see EEV basis, new business results and free surplus generation below). The amounts shown are not, and are not intended to be, reflective of premium income recorded in the IFRS income statement. Internal vesting business is classified as new business where the contracts include an open market option.

The details shown above for new business include contributions for contracts that are classified under IFRS 4 Insurance Contracts—as not containing significant insurance risk. These products are described as investment contracts or other financial instruments under IFRS. Contracts included in this category are primarily certain unit-linked and similar contracts written in UK insurance operations and guaranteed investment contracts and similar funding agreements written in US operations.

The new business premiums shown above, including the comparative figures, exclude the new business premiums from the sold Korea life business, the sale of which was completed in May 2017.

- (4) New regular premium sales are reported on an annualised basis, which represents a full year of instalments in respect of regular premiums irrespective of the actual payments made during the period.
- (5) Under IFRS, dividends declared or approved after the balance sheet date in respect of the prior reporting period are treated as a non-adjusting event. The appropriation reflected in the statement of changes in equity, therefore, includes dividend in respect of the prior year that was declared or approved after the balance sheet date of the prior reporting period. The parent company dividend relating to the reporting period was a first interim dividend of 14.50p per share, as against an interim dividend of 12.93p per share for the first half of 2016.
- (6) The dividend per share has been translated into US dollars at the noon buying rate in New York City on the date each payment was made.
- (7) Market prices presented are the closing prices of the shares on the London Stock Exchange on the last day of trading for each indicated period.

Forward-Looking Statements

This document may contain forward-looking statements with respect to certain of Prudential s plans and its goals and expectations relating to its future financial condition, performance, results, strategy and objectives. Statements that are not historical facts, including statements about Prudential s beliefs and expectations and including, without limitation, statements containing the words may, will, should, continue, aims, estimates, projects, believes, intenplans, seeks and anticipates, and words of similar meaning, are forward-looking statements. These statements are based on plans, estimates and projections as at the time they are made, and therefore undue reliance should not be placed on them. By their nature, all forward-looking statements involve risk and uncertainty. A number of important factors could cause Prudential s actual future financial condition or performance or other indicated results to differ materially from those indicated in any forward-looking statement. Such factors include, but are not limited to, future market conditions, including fluctuations in interest rates and exchange rates the potential for a sustained low-interest rate environment, and the performance of financial markets generally; the policies and actions of regulatory authorities, including, for example, new government initiatives; the political, legal and economic effects of the UK s decision to leave the European Union; the impact of continuing designation as a Global Systemically Important Insurer or G-SII; the impact of competition, economic uncertainty, inflation and deflation; the effect on Prudential s business and results from, in particular, mortality and morbidity trends, lapse rates and policy renewal rates; the timing, impact and other uncertainties of future acquisitions or combinations within relevant industries; the impact of internal projects and other strategic actions failing to meet their objectives; the impact of changes in capital, solvency standards, accounting standards or relevant regulatory frameworks, and tax and other legislation and regulations in the jurisdictions in which Prudential and its affiliates operate; and the impact of legal and regulatory actions, investigations and disputes. These and other important factors may, for example, result in changes to assumptions used for determining results of operations or re-estimations of reserves for future policy benefits. Further discussion of these and other important factors that could cause Prudential s actual future financial condition or performance or other indicated results to differ, possibly materially, from those anticipated in Prudential s forward-looking statements can be found under the Risk Factors heading in this document.

Any forward-looking statements contained in this document speak only as of the date on which they are made. Prudential expressly disclaims any obligation to update any of the forward-looking statements contained in this document or any other forward-looking statements it may make, whether as a result of future events, new information or otherwise except as required pursuant to the UK Prospectus Rules, the UK Listing Rules, the UK Disclosure and Transparency Rules, the Hong Kong Listing Rules, the SGX-ST listing rules or other applicable laws and regulations. Prudential may also make or disclose written and/or oral forward-looking statements in reports filed with or furnished to the US Securities and Exchange Commission, the UK Prudential Regulation Authority and Financial Conduct Authority or other regulatory authorities, as well as in its annual report and accounts to shareholders, proxy statements, offering circulars, registration statements, prospectuses and, prospectus supplements, press releases and other written materials and in oral statements made by directors, officers or employees of Prudential to third parties, including financial analysts. All such forward-looking statements are qualified in their entirety by reference to the factors discussed under the Risk Factors heading of this document. These factors are not exhaustive as Prudential operates in a continually changing business environment with new risks emerging from time to time that it may be unable to predict or that it currently does not expect to have a material adverse effect on its business.

4

Summary of Operating and Financial Review and Prospects

The following discussion and analysis should be read in conjunction with Prudential sunaudited condensed consolidated interim financial statements and the related notes for the period ended 30 June 2017 included in this document. The critical accounting policies which have been applied to these statements are discussed in the section below entitled IFRS Critical Accounting Policies .

The results discussed below are not necessarily indicative of the results to be expected in any future periods. This discussion contains forward-looking statements based on current expectations, which involve risks and uncertainties. Actual results and the timing of certain events may differ significantly from those projected in these forward-looking statements due to a number of factors (including those discussed in the Risk Factors section of this document). See also the discussion under the heading Forward-looking statements above.

Introduction and Overview

In the first half of 2017, Prudential continued to provide a broad range of financial products and services, primarily to the retail market. Prudential s principal operations continue to be in Asia, the United States and the United Kingdom. The accounting policies applied by Prudential in determining the IFRS basis results reflected in Prudential s unaudited condensed consolidated interim financial statements for the period ended 30 June 2017 are the same as those previously adopted in Prudential s consolidated financial statements for the year ended 31 December 2016.

Currency volatility

Despite the uncertainty caused by the outcome of the general election in the UK, sterling has strengthened slightly against most of the currencies in our major international markets since the beginning of the year. However, average sterling exchange rates in the first half of 2017 were significantly lower than in the same period in 2016, contributing to a positive effect on the translation of our non-sterling operations.

In 2014 we adopted the approach of evaluating the financial performance of the Group by presenting percentage growth rates before the impact of the fluctuations in the value of sterling against local currencies in the US and Asia. In a period of currency volatility this approach allows a more meaningful assessment of underlying performance trends. This is because our businesses in the US and Asia receive premiums and pay claims in local currencies and are, therefore, not exposed to any cross-currency trading effects. To maintain comparability in the discussion below the same basis has been applied. Growth rates based on actual exchange rates are also shown in the financial tables presented in this report. Consistent with previous reporting periods, the assets and liabilities of our overseas businesses are translated at period-end exchange rates so the effect of currency movements has been fully incorporated within reported shareholders equity.

The table below explains how the Group's profit before tax on an IFRS basis reconciles to profit before tax and the supplementary analysis of operating profit based on longer-term investment returns. Further explanation on the determination of operating profit based on longer-term investment returns is provided in the Basis of Performance Measures' section. Further explanation on non-operating items is provided in the sub-section IFRS non-operating items. The table presents the half year 2016 results on both an actual exchange rate and constant exchange rate basis so as to eliminate the impact of exchange translation. Actual Exchange Rates (AER) are actual historical exchange rates for the specific accounting period, being the average rates over the period for the income statement and the closing rates for the balance sheet at the balance sheet date. Constant Exchange Rates (CER) results are calculated by translating prior period results using the current period foreign exchange rate i.e. current period average rates for the income statement and current period closing rates for the balance sheet. Further discussion on currency volatility and

the use of constant exchange rates to discuss the performance of our businesses is provided in the Reconciliation of total profit by business segment and geography to IFRS operating profit based on longer-term investment returns section of this document.

⁽i) Operating profit before tax based on longer-term investment returns for half year 2016 includes £43 million in relation to interest received from tax settlement.

In the remainder of this section every time we comment on the performance of our businesses, (except with respect to cash remittances), we focus on their performance measured in local currency (presented here by reference to percentage growth expressed at constant exchange rates) unless otherwise stated. In each such case, the performance of our businesses in actual exchange rate terms was explained by the same factors discussed in the comments below and the impact of currency movements implicit in the CER data.

⁽ii) Following its sale in May 2017, the operating results exclude the contribution of the Korea life business. All comparative results have been similarly adjusted.

Overview

Profit after tax for half year 2017 was £1,505 million compared to a profit of £687 million in the first half of 2016 (on an actual exchange rate basis). The increase reflects the movement in profit before tax attributable to shareholders, which increased from a profit before tax of £664 million in half year 2016 (on an actual exchange rate basis) to a profit of £1,814 million in half year 2017, partially offset by an increase in the tax charge attributable to shareholders returns from a tax credit of £23 million in half year 2016 (on an actual exchange rate basis) to a tax charge of £309 million in half year 2017.

On an actual exchange rate basis, the increase in the total profit before tax attributable to shareholders from £664 million in half year 2016 to £1,814 million in half year 2017 reflects an improvement in operating profit based on longer-term investment returns of £314 million or 15 per cent, which was further improved by a favourable

6

change in non-operating items of £836 million, from a loss of £1,380 million to a loss of £544 million. The improvement of £314 million in total operating profit based on longer-term investment returns on an actual exchange rate basis reflects an increase in Asia (from £728 million to £953 million), the US (from £876 million to £1,073 million), the UK insurance operations (from £492 million to £497 million) and M&G (from £225 million to £248 million), partially offset by a decrease in Prudential Capital s operating profit based on longer-term investment returns (from £13 million to £6 million) and an increase in loss from other income and expenditure (from a loss of £290 million to £419 million). The increase of £314 million or 15 per cent in total operating profit based on longer-term investments includes a positive exchange translation impact of £205 million. Excluding the currency volatility, on a constant exchange rate basis, total operating profit based on longer-term investment returns increased from £2,249 million to £2,358 million.

In the first half of 2017, the performance of the Group has been underpinned by the successful execution of our strategy, driven by the strength of our capabilities and the quality of our products.

Prudential helps to remove uncertainty from the most significant financial moments in the lives of our customers. We provide financial protection against unexpected events such as the diagnosis of critical illness or the loss of a loved one, the opportunity to turn savings into reliable retirement income and the ability to look to the future with confidence. At the same time, we put our customers money to work by investing in the real economy, fuelling growth and improving the quality of people s lives in the communities in which we work.

Our strategy is focused on markets where the opportunities for us are strongest. In each of these markets, we are developing our product range and improving our distribution and technological capabilities in order to meet the needs of customers as fully as we can.

On 10 August 2017, we announced an important step forward for our UK businesses. We are combining M&G and Prudential UK & Europe to create a savings and investments business focused on meeting growing customer demand for comprehensive financial solutions. Combining these businesses will allow us to better leverage our considerable scale and capabilities. This will enable us to increase our growth prospects by providing better outcomes for our millions of customers.

Our first half financial performance

We have continued to make progress in the first half, building on the positive business momentum seen in the second half of 2016.

Our life businesses in Asia remain the key driver of growth for the Group, with a double-digit increase in our profitability, capital generation and cash metrics, as we continue to build out our capabilities and increase our scale across the region. We have also seen a positive performance from our asset management operations, with combined net inflows¹ from external clients at record levels for the period. In our UK life business, consumer appetite for our distinctive PruFund product proposition is supporting high levels of growth in new business sales, while in the US Jackson continues to outperform its peers in the variable annuity market².

Group operating profit based on longer-term investment returns³ increased by 5 per cent⁴ (15 per cent on an actual exchange rate basis) to £2,358 million, reflecting growth in Asia, the US and in our UK asset management operations. IFRS operating profit continues to benefit from the recurring nature of our earnings and our focus on income from protection and fee business.

We announced objectives for 2017 at our investor conference in December 2013 in London on underlying free surplus generation ¹⁶ at the Group level and in Asia and growth of Asia life and asset management pre-tax operating profit based on longer-term investment returns ¹⁷. With the first half contribution, we have now exceeded the Group cumulative free surplus financial objective six months early. We remain on track to achieve our Asia objectives by the end of this year.

In Asia, the addition of long-term, high-quality new business is building scale in our in-force portfolio, which underpins growth and security in current and future earnings and cash generation. Operating profit based on longer-term investment returns³ in Asia increased by 16 per cent⁴ (up 31 per cent on an actual exchange rate basis). Our Asia-based asset manager, Eastspring, ended the period with total funds under management of £131 billion, 11 per cent higher on an actual exchange rate basis than at the start of the year.

In the US, Jackson s variable annuity business continues to drive earnings, with operating profit based on longer-term investment returns³ in this product line increasing by 17 per cent (33 per cent on an actual exchange rate

7

basis) on higher asset balances that reflect continued positive net flows and market appreciation. Our business was well prepared for the application of the Department of Labor reforms on 9 June and has maintained relationships with its key distribution partners. Although some uncertainty remains on the direction of the regulatory process, we continue to develop products and distribution that meet the needs and preferences of the market, backed by a distinctive value proposition that differentiates Jackson from its peers.

In the UK and Europe, M&G and our life operations are both securing significant business flows, driven by the strength of their product performance and market position. At M&G, institutional net inflows of £1.7 billion and record retail net inflows of £5.5 billion have contributed to period-end assets under management on behalf of external clients of £149 billion. Together with internal assets, M&G s total assets under management have increased by 6 per cent to £281 billion since the end of 2016, resulting in a 10 per cent increase in operating profit based on longer-term investment returns³. In our UK life operations, growth is seen in flexible personal pensions, backed by the popular PruFund investment option.

We continue to operate with strong, conservatively managed cash and capital positions at both the Group and local levels. Cash remittances from our business units to the Group increased by 10 per cent to £1,230 million (2016: £1,118 million), with well-balanced contributions across all of our geographic regions. The Group s shareholder Solvency II capital surplus⁵ was £12.9 billion at 30 June 2017, equating to cover of 202 per cent⁶.

Over the period IFRS shareholders funds increased by 5 per cerltto £15.4 billion after taking into account profit after tax of £1,505 million (2016: £687 million on an actual exchange rate basis) and other movements including negative foreign exchange movements of £224 million.

A clear and consistent strategy

This performance demonstrates the success of our clear and consistent strategy, which is focused on three long-term opportunities in Asia, the US and the UK, each driven by a structural and growing demand for our products.

In Asia we offer products that meet the savings, health and protection needs of the region s fast-growing and increasingly affluent middle class. Over the next five years, nearly 700 million people in Asia are expected to enter the middle class⁸, driving sustained and material growth in consumer demand. By 2020, the spending of the middle class in the Asia-Pacific region is expected to surpass that of the US and Europe combined⁸.

The rapidly increasing scale of the Asian middle class is creating a growing need for the financial savings and protection products we provide. Those needs are largely unmet today, with the protection gap in Asia estimated at \$45 trillion⁹ and private health insurance in some areas accounting for less than a quarter of private healthcare spend¹⁰, while insurance penetration remains extremely low¹¹. As a result, there is a clear market opportunity for our products in Asia.

The United States is the world s largest retirement savings market, with 10,000 Americans retiring per daly, which is a significant opportunity for us as a provider of retirement products and income strategies. Consumers in the US express clear demand for an investment option through which they can grow their savings while protecting income. Our variable annuity products meet this need, making them attractive for people moving into retirement. More than \$16 trillion is invested in adviser-distributed retirement assets in the US¹³, while variable annuities account for just \$2 trillion¹⁴ of that amount, demonstrating the scale of the opportunity for us.

There is a similar demand from under-saved populations in Europe. In the United Kingdom the proportion of the population aged over 60 is expected to increase by 50 per cent over the next 20 years¹⁵. As in the US, the demand for

risk-managed investments to fund retirement represents a significant area of growth for our business. Our new combined business, M&G Prudential, will leverage our scale, financial strength and capabilities to continue developing customer-focused solutions and thereby more fully address these needs.

Our customers and products

We address all three of these long-term opportunities through our close attention to the needs of our customers and by continually improving our products and capabilities to meet those needs.

In Asia, our broad-based portfolio of businesses continues to drive our progress. We remain focused on the quality of our execution in addressing distinct consumer needs and opportunities in each of our local markets. In Hong Kong, our track record of introducing innovative features to our range of health and savings products has

8

established us as a leader in the growing critical illness protection segment, and in June we strengthened that track record with the launch of a new lump-sum health insurance policy providing whole of life cover against 75 early to late stage disease conditions. In mainland China, our long-term joint-venture partnership with CITIC is reaching more customers than ever, and China is now our third-largest contributor to new business sales in Asia. We are continuing to build the scale of our platform in China, through expansion of our bancassurance and agency distribution, and by launching in new cities such as Taizhou, our 72nd city, in Zhejiang province in July.

In Singapore, we have introduced more flexibility for customers buying private healthcare insurance with market-leading product options to encourage healthy living and help them better manage their healthcare budgets. We also introduced our first DNA-based health and nutrition programme in Singapore, following the successful launch in Hong Kong last year. In Indonesia, we launched a new medical rider, PRUprime healthcare, in February, followed by its syariah version in April. Designed to meet the needs of customers in a higher economic segment, it includes among its features worldwide coverage with emergency hospitalisation in the US and cashless admission at a network of Prudential partner hospitals in Indonesia, Singapore and Malaysia.

Eastspring continues to attract good levels of net inflows and in May won Asian Investor s prestigious Asia Fund House of the Year award for the second time in three years. In June Eastspring became the first Asian investor to sign an agreement with International Finance Corporation, a member of the World Bank Group, committing US \$500 million to a programme to fund infrastructure projects in emerging markets. This is an example of our commitment to the economies and communities of developing countries.

In the United States, we are continuing to develop our business to ensure that we capture the opportunity presented by the large numbers of Americans reaching retirement age in the next decade. As regulatory developments and industry trends introduce new areas of growth potential in variable annuities, for example in the fee-based advice market, we are adapting our product accordingly, while using our superior platform and distribution capabilities to drive speed-to-market. During the first half of 2017, we launched a fee-based version of our popular Elite Access product, filed a new fee-based version of our leading Perspective variable annuity and saw Jackson maintain relationships with its key distributors post the application of the Department of Labor s fiduciary rule on 9 June. We remain well positioned to build on our strength in the US retirement market.

Our businesses in the UK are serving customers with needs similar to those of consumers in the US. At M&G, we are developing the breadth and the depth of our offering, designing products that align to the outcomes our customers are looking to achieve. Our strong track record of translating innovative investment strategies to commercial success distinguishes M&G from its peers. Our Global Floating Rate High Yield Fund is a clear example of this, offering customers participation in a rising rate environment through investment in high-yield floating-rate notes. Launched in September 2014, it attracted net inflows of £2,259 million in the first half of 2017 and now has assets under management of over £3.5 billion. We are also making good operational progress in our preparations for Brexit, including setting up a new legal structure and SICAV fund range in Luxembourg. These initiatives will ensure that customers retain access to our investment strategies and funds through the most appropriate structure for their needs.

Prudential UK & Europe is responding with agility to regulatory change and consumer preferences following the pensions freedoms introduced in 2015. The strength of our retail sales growth shows how the extension of our popular PruFund investment option to ISAs and retirement products, is meeting customers—demand for proven investment capability and risk-managed solutions as they move towards the latter stages of accumulation and into retirement income. Our Retirement Account provides a flexible Personal Pension which allows customers to save through single or regular payments, transfer from another pension and take income flexibly, and has proven popular with customers, accumulating funds under management of £4.1 billion since its launch at the end of 2016.

Since 2014 we have also been offering our products to a new and growing middle class in Africa, and just last month we entered our fifth African market, Nigeria, building on our success in Ghana, Kenya, Uganda and Zambia. The conditions for growth in these markets are similar to those in Asia 20 years ago, and we are excited about the long-term outlook for our new businesses in the region.

Our capabilities

We continue to invest in our capabilities across the organisation. We are developing a range of digital innovations that will enable us to serve our customers at greater scale and speed, and we continue to invest in talent. In July,

9

we welcomed Mark FitzPatrick to our executive team as Chief Financial Officer, succeeding Nic Nicandrou, who has taken over from Tony Wilkey as Chief Executive of PCA.

Our outlook long-term growth

Our ability to serve the needs of consumers across the wide footprint of our target markets creates value for our customers and our shareholders. Our strategy is focused on markets where the need for our products is strong and growing, and we continue to develop our products and our capabilities to ensure that we access those opportunities to the fullest.

Global economic conditions remain uncertain and markets remain volatile. However, the strength of the underlying opportunities we are accessing, and our proven ability to innovate to create new products and develop our capabilities, along with our ongoing focus on risk management and the strength of our balance sheet leave us well positioned to continue to grow profitably into the future.

defined in the section EEV Basis, New Business Results and Free Surplus Generation .

The objectives assume exchange rates at December 2013 and economic assumptions made by Prudential in calculating EEV basis supplementary information for the half year objectives ended 30 June 2013, and are based on regulatory and solvency regimes applicable across the Group at the time the objectives were set. The objectives assume the existing EEV, IFRS and Free Surplus methodology at December 2013 will be applicable over the period. In addition, following its sale in May 2017, the operating results exclude the contribution of the Korea life business and all comparative results have been similarly adjusted. The relevant 2017 objective (Asia IFRS operating profit) has been adjusted accordingly.

10

Financial Performance

IFRS Critical Accounting Policies

Prudential s discussion and analysis of its financial condition and results of operations are based upon Prudential s consolidated financial statements, which have been prepared in accordance with IFRS as issued by the IASB and as endorsed by the EU. The Group s policy for preparing this consolidated financial information is to use the accounting policies adopted by the Group in its last consolidated financial statements, as updated by any changes in accounting policies it intends to make in its next consolidated financial statements as a result of new or amended IFRS that are applicable or available for early adoption for the next annual financial statements and other policy improvements. EU-endorsed IFRS may differ from IFRS as issued by the IASB if, at any point in time, new or amended IFRSs have not been endorsed by the EU. As at 30 June 2017, there were no unendorsed standards effective for the period ended 30 June 2017 which impact the consolidated financial information of Prudential and there were no differences between IFRSs endorsed by the EU and IFRSs issued by the IASB in terms of their application to Prudential. Accordingly, Prudential s financial information for the period ended 30 June 2017 is prepared in accordance with IFRS as issued by the IASB. Prudential adopts mandatory requirements of new or altered EU-adopted IFRS standards when required, and may consider earlier adoption where permitted and appropriate in the circumstances.

The preparation of these financial statements requires Prudential to make estimates and judgements that affect the reported amounts of assets, liabilities, and revenues and expenses, and related disclosure of contingent assets and liabilities. On an on-going basis, Prudential evaluates its estimates, including those related to long-term business provisioning and the fair value of assets.

Critical accounting policies are defined as those that are reflective of significant judgements and uncertainties, and potentially give rise to different results under different assumptions and conditions.

Prudential s critical accounting policies and the critical aspects of its estimates and judgements in determining the measurement of the Group s assets and liabilities are further discussed IFRS Critical Accounting Policies of the Group s 2016 annual report on Form 20-F. In preparing the unaudited condensed consolidated interim financial statements included elsewhere in this document, the significant judgements made by management in applying the Group s accounting policies and the key sources of estimation uncertainty were for the same items as those described therein, which are:

Classification of insurance and investment contracts; Measurement of policyholder liabilities; Measurement of deferred acquisition costs; Determination of fair value of financial investments; and Determining impairment related to financial assets.

11

Summary Consolidated Results and Basis of Preparation of Analysis

The following table shows Prudential s consolidated total profit on an actual exchange rate basis for the periods indicated.

	2017 £m	2016 £m
	Half year	Half year
Total revenue, net of reinsurance	43,009	35,541
Total charges, net of reinsurance	(40,922)	(34,671)
Share of profits from joint ventures and associates, net of related tax	120	86
Profit before tax (being tax attributable to shareholders and policyholders		
returns)*	2,207	956
Less tax charge attributable to policyholders returns	(393)	(292)
Profit before tax attributable to shareholders	1,814	664
Total tax charge attributable to policyholders and shareholders	(702)	(269)
Adjustment to remove tax charge attributable to policyholders returns	393	292
Tax (charge)/credit attributable to shareholders returns	(309)	23
Profit for the period	1,505	687

*This measure is the formal profit before tax measure under IFRS but it is not the result attributable to shareholders. Under IFRS, the pre-tax GAAP measure of profits is profit before policyholder and shareholder taxes. This measure is not relevant for reflecting pre-tax results attributable to shareholders for two reasons. Firstly, this profit measure represents the aggregate of pre-tax results attributable to shareholders and a pre-tax amount attributable to policyholders. Secondly, the amount is determined after charging the transfer to the liability for unallocated surplus, which in turn is determined in part by policyholder taxes borne by the ring-fenced with-profits funds. It is noted that this circular feature is specific to with-profits funds in the UK, and other similarly structured overseas funds, and should be distinguished from other products, which are referred to as with-profits and the general accounting treatment of premium or other policy taxes.

Accordingly, Prudential has chosen to explain its unaudited condensed consolidated interim results by reference to profits for the period, reflecting profit after tax. In explaining movements in profit for the period, reference is made to trends in profit before shareholder tax and the shareholder tax charge. The explanations of movement in profit before shareholder tax are shown below by reference to the profit analysis applied for segmental disclosure as shown in note B1 to Prudential s unaudited condensed consolidated interim financial statements. This basis is used by management and reported externally to the holders of shares listed on the UK, Hong Kong and Singapore exchanges and to the financial markets in those countries. Separately, in this section, analysis of movements in profits before shareholder tax is provided by nature of revenue and charges.

Explanation of Movements in Profits After Tax and Profits Before Shareholder

Tax by Reference to the Basis Applied for Segmental Disclosure

a) Group overview

Profit after tax for half year 2017 was £1,505 million compared to a profit of £687 million in the first half of 2016. The increase reflects the movement in profit before tax attributable to shareholders, which increased from a profit before tax of £664 million in half year 2016 to a profit of £1,814 million in half year 2017, partially offset by an increase in the tax charge attributable to shareholders returns from a tax credit of £23 million in half year 2016 to a tax charge of £309 million in half year 2017.

The increase in the total profit before tax attributable to shareholders from £664 million in half year 2016 to £1,814 million in half year 2017 reflects primarily an improvement in operating profit based on longer-term investment returns from £2,044 million in half year 2016 to £2,358 million in half year 2017 and a favourable change in non-operating items of £836 million from a negative £1,380 million in half year 2016 to a negative £544 million in half year 2017. The increase of £314 million or 15 per cent in operating profit based on longer-term investment returns includes a positive impact of exchange translation of £205 million. Excluding the currency volatility, on a constant exchange rate basis, the Group operating profit based on longer-term investment returns increased by £109 million or 5 per cent reflecting growth in Asia, the US and in the UK asset management.

The favourable change in non-operating items of £836 million is primarily due to the favourable change in short-term fluctuations in investment returns from negative £1,385 million in half year 2016 to £573 million in half year 2017 and the inclusion in half year 2017 of a £61 million cumulative foreign exchange gains recycled from other comprehensive income upon the disposal of the Korea life business.

The half year 2017 effective rate of tax on the total profit attributable to shareholders was 17 per cent (half year 2016: negative 3 per cent). The movement is driven by a reduction in the negative short-term fluctuations in the US insurance operations, which attracts tax relief at a higher rate than profits taxed elsewhere in the Group.

b) Summary by business segment and geographical region

Prudential s operating segments, as determined under IFRS 8, are insurance operations split by geographic regions in which it conducts business, which are Asia, the US and the UK, and asset management operations. The asset management operations are split into M&G, which is Prudential s UK and European asset management business, Prudential Capital, which undertakes treasury functions for the Group, Eastspring Investments, which is the Asia asset management business, and the US broker-dealer and asset management business.

The following table shows Prudential s IFRS consolidated total profit (loss) after tax for the periods indicated presented by summary business segment and geographic region. The accounting policies applied to the segments below are the same as those used in Prudential s consolidated accounts.

2017 £m

^{*} For the US, including the broker dealer business

Profit from insurance operations

Total profit from insurance operations in half year 2017 was £1,495 million compared to a total profit of £866 million in half year 2016. All of the profits from insurance operations in the half years 2017 and 2016 were from continuing operations. The movement in profits for insurance operations can be summarised as follows:

	2017 £ m	2016 £m
	Half year	Half year
Profit before shareholder tax	1,771	859
Shareholder tax	(276)	7
Profit after tax	1,495	866

The increase of £912 million from profit before tax attributable to shareholders in half year 2016 of £859 million compared to a profit of £1,771 million in half year 2017 is attributable to an increase of £399 million in operating profit based on longer-term investment returns from £2,047 million in half year 2016 to £2,446 million in half year 2017 and the positive change of £489 million in the short-term fluctuations in investment returns from a negative £1,193 million in half year 2016 to a negative £704 million in half year 2017. The increase in the operating profit based on longer-term investment returns was primarily driven by continued strong growth in the Asia life insurance and increased levels of fee income on higher variable annuity account balances in the US. The increase of £399 million in operating profit based on longer-term investment returns includes a positive exchange translation impact of £207 million.

The effective shareholder tax rate on profits from insurance operations increased from negative 1 per cent in half year 2016 to 16 per cent in half year 2017. The movement is driven by a reduction in negative short-term fluctuations in the US insurance operations, which attracts tax relief at a higher rate than profits are taxed elsewhere in the Group.

In order to understand how Prudential s results are derived, it is necessary to understand how profit emerges from its business. This varies from region to region, primarily due to differences in the nature of the products and regulatory environments in which Prudential operates.

Asia

Basis of profits

The assets and liabilities of contracts classified as insurance under IFRS 4 are determined in accordance with methods prescribed by local GAAP and adjusted to comply, where necessary, with UK GAAP. Under IFRS 4, subject to the

^{**} Representing principally central operations.

conditions of that standard, the continued application of UK GAAP in this respect is permitted.

For Asia operations in countries where local GAAP is not well established and in which the business is primarily non-participating and linked business, measurement of the insurance assets and liabilities is determined substantially by reference to US GAAP principles. This basis is applied in India and Taiwan. For with-profits business in Hong Kong, Singapore and Malaysia the basis of profit recognition is bonus driven as described under United Kingdom Basis of profits below.

14

Comparison of total profit arising from Asia insurance operations

The following table shows the movement in profit arising from Asia insurance operations from half year 2016 to half year 2017:

	2017 £m	2016 £m
	Half year	Half year
Profit before shareholder tax	968	704
Shareholder tax	(133)	(125)
Profit after tax	835	579

The increase of £264 million from the profit before tax is attributable to shareholders in half year 2016 of £704 million to a profit of £968 million in half year 2017 primarily reflects an increase of £203 million in operating profit based on longer-term investment returns (from £667 million to £870 million), a favourable change in short-term fluctuations in investment returns of £40 million (from £1 million to £41 million) and a one-off cumulative exchange gain of £61 million recycled from other comprehensive income upon the disposal of the Korea life business. The increase of £203 million in operating profit based on longer-term investment returns includes a positive exchange translation impact of £85 million. Excluding the currency volatility, Asia insurance operations operating profit based on longer-term investment returns was up 16 per cent or £118 million. The increase in operating profit based on longer-term investment returns of our life insurance operations in Asia was as a result of the continued growth of our in-force book of recurring premium business.

The effective shareholder tax rate decreased from 18 per cent in half year 2016 to 14 per cent in half year 2017 reflecting an increase in the proportion of income that is not subject to local taxation.

United States

Basis of profits

The underlying profit on Jackson s business arises predominantly from fee income on variable annuity business, spread income from interest-sensitive products, such as fixed annuities and institutional products, and insurance margin, net of expenses measured on a US GAAP basis. In addition, the profit (including non-operating items) in any period include the incidence of realised gains and losses (including impairment) on assets classified as available-for-sale, fair value movements on derivatives and securities classified as fair value through profit and loss and value movements on product guarantees.

Comparison of total profit arising from US insurance operations

The following table shows the movement in profits arising from US insurance operations from half year 2016 to half year 2017:

	2017 £m	2016 £m
	Half year	Half year
Profit before shareholder tax	297	(583)
Shareholder tax	(48)	270

Profit after tax (313)

The increase of £880 million in profit before tax attributable to shareholders from a loss of £583 million in half year 2016 to a profit of £297 million in half year 2017, primarily comprised an increase of £191 million in operating profit based on longer-term investment returns (from £888 million to £1,079 million) and a positive change of £686 million in short-term fluctuations in investment returns (from a negative £1,440 to a negative £754 million). The increase of £191 million in operating profit based on longer-term investment returns includes a positive exchange translation impact of £122 million. Excluding the currency volatility, on a constant exchange rate basis, the operating profit based on longer-term investment returns in half year 2017 was up 7 per cent or £69 million, reflecting increased levels of fee income on higher variable annuity account balances driven by continued positive net flows and buoyant investment markets.

The negative short-term fluctuations in the first half are mainly attributable to the net value movement in the period of the hedge instruments held to manage market exposures and reflect the positive equity market performance in the US during the period.

The effective tax rate on profits from US operations decreased from 46 per cent in half year 2016 to 16 per cent in half year 2017. The rate has been altered by the reduction in negative short-term fluctuations, which attracts an effective rate of 35 per cent (half year 2016: 30 per cent) as compared to 30 per cent (half year 2016: 28 per cent) on operating profit.

United Kingdom

Basis of profits

Prudential s results comprise an annual profit distribution to shareholders from its UK long-term with-profits fund recognised in line with the amounts credited or paid to policyholders in the period as well as profits from its shareholder backed annuity and other businesses.

For Prudential s UK insurance operations, the primary annual contribution to shareholders profit comes from its with-profits products. With-profits products are designed to provide policyholders with smooth investment returns through a mix of regular and final bonuses.

For with-profits business (including non-participating business owned by the PAC with-profits fund), adjustments to liabilities and any related tax effects are recognised in the income statement. However, except for any impact on the annual declaration of bonuses, shareholder profit for with-profits business is unaffected. This is because IFRS basis profits for the with-profits business, which are determined on the same basis as on preceding UK GAAP, solely reflect one-ninth of the cost of bonuses declared for the year.

The results of the UK shareholder-backed annuity business reflect the inclusion of investment returns including realised and unrealised gains and losses. The charge for benefits reflects the valuation rate of interest applied to discount future anticipated payments to policyholders. This rate in turn reflects current market yields adjusted for factors including default risks on the assets backing the liabilities. The level of allowance for default risk is a key assumption. Details are included in note B4 to the unaudited condensed consolidated financial statements.

Comparison of total profit arising from UK insurance operations

The following table shows the movement in profits arising from UK insurance operations from half year 2016 to half year 2017:

	2017 £m	2016 £m Half year
	Half year	
Profit before shareholder tax	506	738
Shareholder tax	(95)	(138)
Profit after tax	411	600

The decrease of £232 million in profit before tax attributable to shareholders from £738 million in half year 2016 to £506 million in half year 2017 primarily attributable to the negative change of £237 million in the short-term fluctuations in investment returns from £246 million in half year 2016 to £9 million in half year 2017. This negative

impact was partially offset by an increase of £5 million in operating profit based on longer-term investment returns from £492 million to £497 million. Operating profit based on longer-term investment returns was in line with the first half of 2016, with lower shareholder annuity profits offset by larger contributions from management actions.

The decrease of £237 million in the gains from the short-term fluctuations in investment returns from £246 million in half year 2016 to £9 million in half year 2017 is attributable to lower gains on bonds backing share capital reflecting a more muted change in interest rates in the first half of 2017 as compared to the same period in 2016.

The effective shareholder tax rate on profits from UK insurance operations for half year 2016 of 19 per cent remained unchanged in half year 2017.

16

Profit from asset management

The following table shows the movement in profits from asset management from half year 2016 to half year 2017:

	2017 £m	2016 £m Half year
	Half year	
Profit before shareholder tax	415	211
Shareholder tax	(74)	(35)
Profit after tax	341	176

Total profit before tax from asset management increased from £211 million in half year 2016 to £415 million in half year 2017. The £204 million increase in profit before tax attributable to shareholders in half year 2017 is attributable to an increase of £44 million in operating profit based on longer-term investment returns (from £287 million in half year 2016 to £331 million in half year 2017) and a favourable change in short-term fluctuations in investment returns of £160 million.

The increase of £44 million in operating profit based on longer-term investment returns is attributable to profit increases in M&G of £23 million, Eastspring Investments of £22 million and the US asset management of £6 million, partially offset by a decrease in Prudential Capital of £7 million.

The increase in the M&G operating profit based on longer-term investment returns of £23 million to £248 million in half year 2017 was driven by increased funds under management as a result of asset inflows and positive markets. The increase in the Eastspring Investments operating profit based on longer-term investment returns of £22 million reflected the continued strong growth of its assets under management.

The effective tax rate on profits from asset management operations increased marginally from 17 per cent in half year 2016 to 18 per cent in half year 2017.

Unallocated corporate result

The following table shows the movement in the unallocated corporate result from half year 2016 to half year 2017:

	2017 £m	2016 £m
	Half year	Half year
Loss before shareholder tax	(372)	(406)
Shareholder tax	41	51
Loss after tax	(331)	(355)

The loss after shareholder tax for unallocated corporate activity decreased by £24 million from £355 million in half year 2016 to £331 million in half year 2017.

The loss before shareholder tax decreased by £34 million from £406 million at half year 2016 to £372 million at half year 2017. The decrease in the loss before shareholder tax is attributable to the favourable movement in short-term fluctuations in investment returns of £163 million from a loss of £116 million in half year 2016 to a gain of £47 million in half year 2017, partially offset by the £129 million increase in net other expenditure (including restructuring and Solvency II implementation costs) from £290 million in half year 2016 to £419 million in half year

2017. The increase in net other expenditure primarily reflects higher interest costs related to the debt issued in 2016 and a credit of £43 million in half year 2016 for interest received from a tax settlement.

The effective tax rate on unallocated corporate result decreased from 13 per cent at half year 2016 to 11 per cent at half year 2017, principally reflecting an increase in withholding tax suffered on remittances which is irrecoverable, reducing the overall tax credit.

17

Basis of Performance Measures

Prudential uses a performance measure of operating profit based on longer-term investment returns. The directors believe that this performance measure better reflects underlying performance. It is the basis used by management for the reasons outlined below. It is also the basis on which analysis of the Group s results has been provided to UK shareholders and the UK financial market for some years under long standing conventions for reporting by proprietary UK life assurers.

Prudential determines and presents operating segments based on the information that is internally provided to the Group Executive Committee (GEC), which is Prudential s chief operating decision maker.

An operating segment is a component of Prudential that engages in business activities from which it may earn revenues and incur expenses, including revenues and expenses that relate to transactions with any of Prudential s other components. An operating segment s operating results are reviewed regularly by the GEC to make decisions about resources to be allocated to the segment and assess its performance, and for which discrete financial information is available.

The operating segments identified by Prudential reflect its organisational structure, which is by both geography (Asia, US and UK) and by product line (insurance operations and asset management). The Group s operating segments determined in accordance with IFRS 8, Operating Segments, are as follows:

Insurance operations: Asset management operations:

Asia Eastspring Investments

US (Jackson) US broker-dealer and asset management

UK M&G

Prudential Capital

The Group s operating segments are also its reportable segments for the purposes of internal management reporting.

Performance measure

The performance measure of operating segments utilised by the Company is IFRS operating profit attributable to shareholders based on longer-term investment returns, as described below. This measurement basis distinguishes operating profit based on longer-term investment returns from other constituents of the total profit as follows:

Short-term fluctuations in investment returns on shareholder-backed business including the impact of short-term market effects on the carrying value of Jackson s guarantee liabilities and related derivatives as explained below; Amortisation of acquisition accounting adjustments arising on the purchase of business. This comprises principally the charge for the adjustments arising on the purchase of REALIC in 2012; and

Profit (loss) attaching to the sold Korea life business including the recycling of the cumulative exchange translation gain on the sold Korea life business from other comprehensive income to the income statement in 2017. Segment results include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items are mainly in relation to the Group Head Office and the Asia Regional Head Office.

Determination of operating profit based on longer-term investment returns for investment and liability movements

(a) General principles

(i) UK style with-profits business

The operating profit based on longer-term returns reflects the statutory transfer gross of attributable tax. Value movements in the underlying assets of the with-profits funds do not affect directly the determination of operating profit.

18

(ii) Unit-linked business

The policyholder unit liabilities are directly reflective of the underlying asset value movements. Accordingly, the operating results based on longer-term investment returns reflect the current period value movements in both the unit liabilities and the backing assets.

(iii) US variable annuity and fixed index annuity business

This business has guarantee liabilities which are measured on a combination of fair value and other, US GAAP derived, principles. These liabilities are subject to an extensive derivative programme to manage equity and, with those of the general account, interest rate exposures. The principles for determination of the operating profit and short-term fluctuations are necessarily bespoke, as discussed in section (c) below.

(iv) Business where policyholder liabilities are sensitive to market conditions

Under IFRS, the degree to which the carrying values of liabilities to policyholders are sensitive to current market conditions varies between territories depending upon the nature of the grandfathered measurement basis. In general, in those instances where the liabilities are particularly sensitive to routine changes in market conditions, the accounting basis is such that the impact of market movements on the assets and liabilities is broadly equivalent in the income statement, and operating profit based on longer-term investments returns is not distorted. In these circumstances, there is no need for the movement in the liability to be bifurcated between the elements that relate to longer-term market conditions and short-term effects.

However, some types of business movements in liabilities do require bifurcation to ensure that at the net level (ie after allocated investment return and charge for policyholder benefits) the operating result reflects longer-term market returns.

Examples of where such bifurcation is necessary are in Hong Kong and for UK shareholder-backed annuity business, as explained in sections b(i) and d(i), respectively. For other types of Asia non-participating business, longer-term interest rates are used to determine the movement in policyholder liabilities for determining operating results.

(v) Other shareholder-financed business

The measurement of operating profit based on longer-term investment returns reflects the particular features of long-term insurance business where assets and liabilities are held for the long-term and for which the accounting basis for insurance liabilities under current IFRS is not generally conducive to demonstrating trends in underlying performance of life businesses exclusive of the effects of short-term fluctuations in market conditions. In determining the profit on this basis, the following key elements are applied to the results of the Group s shareholder-financed operations.

Except in the case of assets backing liabilities which are directly matched (such as unit-linked business) or closely correlated with value movements (as discussed below) operating profit based on longer-term investment returns for shareholder-financed business is determined on the basis of expected longer-term investment returns.

Debt, equity-type securities and loans

Longer-term investment returns comprise actual income receivable for the period (interest/dividend income) and for both debt and equity-type securities longer-term capital returns.

In principle, for debt securities and loans, the longer-term capital returns comprise two elements:

Risk margin reserve based charge for the expected level of defaults for the period, which is determined by reference to the credit quality of the portfolio. The difference between impairment losses in the reporting period and the risk margin reserve charge to the operating result is reflected in short-term fluctuations in investment returns; and

The amortisation of interest-related realised gains and losses to operating results based on longer-term investment returns to the date when sold bonds would have otherwise matured.

19

At 30 June 2017, the level of unamortised interest-related realised gains and losses related to previously sold bonds for the Group was a net gain of £876 million (half year 2016: net gain of £605 million).

Equity-type securities

For equity-type securities, the longer-term rates of return are estimates of the long-term trend investment returns for income and capital having regard to past performance, current trends and future expectations. Equity-type securities held for shareholder-financed operations other than the UK annuity business, unit-linked and US variable annuity are of significance for the US and Asia insurance operations. Different rates apply to different categories of equity-type securities.

Derivative value movements

Generally, derivative value movements are excluded from operating results based on longer-term investment returns (unless those derivative value movements broadly offset changes in the accounting value of other assets and liabilities included in operating profit). The principal example of non-equity based derivatives (for example interest rate swaps and swaptions) whose value movements are excluded from operating profit arises in Jackson, as discussed below in section (c).

(b) Asia insurance operations

(i) Business where policyholder liabilities are sensitive to market conditions

For certain Asia non-participating business, for example in Hong Kong, the economic features are more akin to asset management products with policyholder liabilities reflecting asset shares over the contract term. For these products, the charge for policyholder benefits in the operating results should reflect the asset share feature rather than volatile movements that would otherwise be reflected if the local regulatory basis (also applied for IFRS basis) was used.

For certain other types of non-participating business, longer-term interest rates are used to determine the movement in policyholder liabilities for determining operating results.

(ii) Other Asia shareholder-financed business *Debt securities*

For this business the realised gains and losses are principally interest related. Accordingly, all realised gains and losses to date for these operations are being amortised over the period to the date those securities would otherwise have matured, with no explicit risk margin reserve charge.

Equity-type securities

For Asia insurance operations, investments in equity securities held for non-linked shareholder-backed operations amounted to £1,535 million as at 30 June 2017 (30 June 2016: £1,035 million). The rates of return applied for half year 2017 ranged from 4.7 per cent to 17.2 per cent (half year 2016: 3.2 per cent to 13.0 per cent) with the rates applied varying by territory. These rates may be different between territories reflecting, for example, differing

expectations of inflation in each territory. The assumptions are for the returns expected to apply in equilibrium conditions. The assumed rates of return do not reflect any cyclical variability in economic performance and are not set by reference to prevailing asset valuations.

The longer-term investment returns for the Asia insurance joint ventures and associates accounted for using the equity method are determined on a similar basis as the other Asia insurance operations described above.

(c) US insurance operations

(i) Separate account business

For such business the policyholder unit liabilities are directly reflective of the asset value movements. Accordingly, the operating results based on longer-term investment returns reflect the current period value movements in unit liabilities and the backing assets.

20

(ii) US variable and fixed index annuity business

The following value movements for Jackson s variable and fixed index annuity business are excluded from operating profit based on longer-term investment returns. See note B1.2 note (ii) to the unaudited condensed consolidated financial statements:

Fair value movements for equity-based derivatives;

Fair value movements for embedded derivatives for the not for life portion of Guaranteed Minimum Withdrawal Benefit and fixed index annuity business, and Guaranteed Minimum Income Benefit reinsurance (see below); Movements in the accounts carrying value of Guaranteed Minimum Death Benefit and the for life portion of Guaranteed Minimum Withdrawal Benefits and Guaranteed Minimum Income Benefit liabilities, for which, under the grandfathered US GAAP applied under IFRS for Jackson s insurance assets and liabilities, the measurement basis gives rise to a muted impact of current period market movements;

A portion of the fee assessments as well as claim payments, in respect of guarantee liabilities; and Related amortisation of deferred acquisition costs for each of the above items.

Embedded derivatives for variable annuity guarantee minimum income benefit

The Guaranteed Minimum Income Benefit liability, which is essentially fully reinsured, subject to a deductible and annual claim limits, is accounted for in accordance with Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Subtopic 944-80 Financial Services Insurance Separate Accounts (formerly SOP 03-1) under IFRS using grandfathered US GAAP. As the corresponding reinsurance asset is net settled, it is considered to be a derivative under IAS 39, Financial Instruments: Recognition and Measurement, and the asset is therefore recognised at fair value. As the Guaranteed Minimum Income Benefit is economically reinsured the mark to market element of the reinsurance asset is included as a component of short-term fluctuations in investment returns.

(iii) Other derivative value movements

The principal example of non-equity based derivatives (for example interest rate swaps and swaptions) whose value movements are excluded from operating profit arises in Jackson. Non-equity based derivatives are primarily held by Jackson as part of a broadly-based hedging programme for features of Jackson s bond portfolio (for which value movements are booked in the statement of comprehensive income rather than the income statement), product liabilities (for which US GAAP accounting as grandfathered under IFRS 4 does not fully reflect the economic features being hedged), and the interest rate exposure attaching to equity-based embedded derivatives.

(iv) Other US shareholder-financed business *Debt securities*

Jackson is the shareholder-backed operation for which the distinction between impairment losses and interest-related realised gains and losses is in practice relevant to a significant extent. Jackson has used the ratings by Nationally Recognised Statistical Ratings Organisations (NRSRO) or ratings resulting from the regulatory ratings detail issued by the National Association of Insurance Commissioners (NAIC) developed by external third parties such as BlackRock Solutions to determine the average annual risk margin reserve to apply to debt securities held to back general account business. Debt securities held to back separate account and reinsurance funds withheld are not subject to risk margin reserve charge. Further details of the risk margin reserve charge, as well as the amortisation of interest-related realised

gains and losses, for Jackson are shown in note B1.2 to the unaudited condensed consolidated financial statements.

Equity-type securities

As at 30 June 2017, the equity-type securities for US insurance non-separate account operations amounted to £1,256 million (half year 2016: £1,115 million). For these operations, the longer-term rates of return for income and capital applied in half year 2017 and 2016, which reflect the combination of the average risk-free rates over the period and appropriate risk premiums are as follows:

	2017 Half year	2016 Half year
Equity-type securities such as common and preferred stock and		
portfolio holdings in mutual funds	6.2% to 6.5%	5.5% to 5.9%
Other equity-type securities such as investments in limited		
partnerships and private equity funds	8.2% to 8.5%	7.5% to 7.9%

21

The amounts of the actual less longer-term returns for the equity-type securities of the US insurance operations for half year 2017 and 2016 are shown in note B1.2(ii) to the unaudited condensed consolidated financial statements.

(d) UK Insurance operations

(i) Shareholder-backed annuity business

For this business, policyholder liabilities are determined by reference to current interest rates. The value movements of the assets covering liabilities are closely correlated with the related change in liabilities. Accordingly, asset value movements are recorded within the operating results based on longer-term investment returns. Policyholder liabilities include a margin for credit risk. Variations between actual and best estimate expected impairments are recorded as a component of short-term fluctuations in investment returns.

The operating result based on longer-term investment returns reflects the impact of value movements on policyholder liabilities for annuity business within the non-profit sub-fund of The Prudential Assurance Company (PAC) after adjustments to allocate the following elements of the movement to the category of short-term fluctuations in investment returns:

The impact on credit risk provisioning of actual upgrades and downgrades during the period;

Credit experience compared with assumptions; and

Short-term value movements on assets backing the capital of the business.

Credit experience reflects the impact of defaults and other similar experience, such as asset exchanges arising from debt restructuring by issuers that include effectively an element of permanent impairment of the security held. Positive or negative experience compared with assumptions is included within short-term fluctuations in investment returns without further adjustment. The effects of other changes to credit risk provisioning are included in the operating result, as is the net effect of changes to the valuation rate of interest due to portfolio rebalancing to align more closely with management benchmark.

(ii) Non-linked shareholder-financed business

For debt securities backing non-linked shareholder-financed business of the UK insurance operations (other than the annuity business) the realised gains and losses are principally interest related. Accordingly, all realised gains and losses to date for these operations are being amortised over the period to the date those securities would otherwise have matured, with no explicit risk margin reserve charge.

(e) Fund management and other non-insurance businesses

For these businesses, the particular features applicable for life assurance noted above do not apply. For these businesses it is inappropriate to include returns in the operating result on the basis described above. Instead, it is appropriate to generally include realised gains and losses in the operating result with temporary unrealised gains and losses being included in short-term fluctuations. In some instances, it may also be appropriate to amortise realised gains and losses on derivatives and other financial instruments to operating results over a time period that reflects the

underlying economic substance of the arrangements.

22

Notes

- (i) The Group provides supplementary analysis of IFRS profit before tax attributable to shareholders so as to distinguish operating profit based on longer-term investment returns from other elements of total profit. Operating profit based on longer-term investment returns is the basis on which management regularly reviews the performance of Prudential s segments as defined by IFRS 8. Further discussion on the determination of operating profit based on longer-term investment returns is provided in section (c) Additional explanation of performance measures and analysis of consolidated results by business segment and geographical region above.
- (ii) The results of Prudential s long-term business operations are affected by changes to assumptions, estimates and bases of preparation. Where applicable, these are described in note B4 to the unaudited condensed consolidated interim financial statements.
- (iii) General insurance commission represents the commission receivable net of expenses for Prudential-branded general insurance products in connection with the arrangement to transfer the UK general insurance business to Churchill in 2002.

Prudential has made a good start to 2017, with increases in all of our key performance metrics, reflecting progression in the Group's underlying earnings drivers together with the beneficial impact of positive investment market conditions and favourable currency effects. The consistency of our performance is driven by the alignment of our business to the most attractive opportunities, the quality of our franchises in those markets and our ability to adapt with speed and agility to changes in economic and regulatory conditions, both globally and locally. At a Group level, our results benefit from diversification by geography, product and distribution channel, our focus on recurring income streams that are less exposed to market movements and the capital generative nature of our business model.

In Asia, we have achieved double-digit growth in IFRS operating profit, reflecting the increasing scale and diversification of our long-term recurring premium business. We continue to take decisive actions to preserve the quality of the business that we write, building the contribution from health and protection income and improving the overall economic returns of the new business portfolio.

In the US and the UK, our financial progress is underpinned by the accumulation of assets on which we earn fees. In each of these markets, our businesses have seen strong net inflows in the first half, demonstrating their competitive positioning in product, distribution and service capabilities. Asset values were also boosted by positive investment market movements in the period.

Despite the uncertainty caused by the outcome of the general election in the UK, sterling has strengthened slightly against most of the currencies in our major international markets since the beginning of the year. However, average sterling exchange rates in the first half of 2017 were significantly lower than in the same period in 2016, contributing

to a positive effect on the translation of results from our non-sterling operations. To aid comparison of underlying progress, we continue to express and comment on the performance trends of our Asia and US operations on a constant currency basis, as discussed further below.

Consistent with the explanations made in the currency volatility section in the Summary of Operating and Financial Review and Prospects comparison of the half year 2017 and half year 2016 performance is partially affected by the movements in average exchange rates used to translate into sterling the results of our overseas operations. Therefore, to facilitate explanations of changes in underlying performance, in the commentary on half year 2017 compared with half year 2016 discussions below, every time we comment on the performance of our businesses, we focus on their performance measured on the constant exchange rates basis unless otherwise stated. In each such case, the performance of our businesses in actual exchange rate terms was explained by the same factors discussed in the comments below and the impact of currency movements implicit in the constant exchange rate data.

25

The key operational highlights in the first half of 2017 were as follows:

Operating profit based on longer-term investment returns was 5 per cent¹ higher at £2,358 million (up 15 per cent on an actual exchange rate basis), equivalent to an annualised 24 per cent² return on opening IFRS shareholders funds. The Group s performance was driven by our Asia life and asset management operations which saw IFRS operating profit increase 16 per cent¹ to £953 million on growth in the in-force portfolio (31 per cent on an actual exchange rate basis). In the US, total IFRS operating profit was up 8 per cent, driven by increased levels of fee income on higher separate account balances (22 per cent increase on an actual exchange rate basis). In the UK, IFRS operating profit from our insurance and asset management operations increased by 4 per cent³, due to stronger contributions from management actions in the life business and higher assets under management at M&G.

Group shareholders Solvency II capital surplus was estimated at £12.9 billion⁵ at 30 June 2017, equivalent to a cover ratio of 202 per cent (31 December 2016: £12.5 billion, 201 per cent). The movement since the start of the year primarily reflects the Group s continuing strong operating capital generation, partially offset by the payment of the 2016 second interim dividend.

Investment markets have been generally supportive through the period, with equity markets trending upwards and more stability in bond and currency markets compared with 2016. The recovery in equity markets towards the end of 2016 has continued into 2017, with the S&P 500 index up 8 per cent and the FTSE 100 index gaining 2 per cent in the first six months. Longer-term yields at 30 June 2017 were almost unchanged from those at the start of the year in the UK and down slightly in the US. In Asia, where yield movements have been more pronounced, our operating earnings are largely insensitive to interest rates. Overall, we continue to reduce the sensitivity of our earnings and balance sheet to investment markets, but remain significant long-term holders of financial assets to back the commitments that we have made to our customers. Short-term fluctuations in both these assets and related liabilities are reported outside the operating result, which is based on longer-term investment return assumptions. In the first half of 2017, these short-term fluctuations were overall negative, driven by the effect of higher equity markets on our hedging programme in the US. In the first half of the year total IFRS post tax profit was up at £1,505 million (2016: £720 million on a constant exchange rate basis and £687 million on an actual exchange rate basis).

Reflecting the strong operating results, the Group s IFRS shareholders equity increased by 5 per centver the six month period to £15.4 billion (31 December 2016: £14.7 billion).

Operating profit based on longer-term investment returns

Total operating profit increased by 5 per cent¹ (15 per cent on an actual exchange rate basis) in the first half of 2017 to £2,358 million.

Asia total operating profit of £953 million was 16 per cent¹ higher (31 per cent on an actual exchange rate basis), with continued strong growth in both life insurance and asset management through Eastspring. US total operating profit at £1,073 million increased by 8 per cent (22 per cent increase on an actual exchange rate basis), reflecting increased levels of fee income on higher variable annuity account balances. UK total operating profit of £497 million was in line with the first half of 2016, with lower shareholder annuity profits offset by larger contributions from management actions.

M&G operating profit was 10 per cent higher at £248 million, driven by increased funds under management as a result of asset inflows and positive markets.

Life insurance operations: Taken together, operating profit based on longer-term investment returns from our life insurance operations in Asia, the US and the UK increased 9 per cent¹ to £2,429 million (20 per cent on an actual exchange rate basis).

Operating profit based on longer-term investment returns in our life insurance operations in **Asia** was 16 per cent¹ higher at £870 million (up 30 per cent on an actual exchange rate basis), as a result of the continued growth of our in-force book of recurring premium business. Insurance margin was 24 per cent higher (39 per cent on an actual exchange rate basis) and accounted for 69 per cent of operating income⁷, reflecting our ongoing preference for

26

health and protection. Following strong recent growth in sales volumes, particularly in health and protection through our agency channel, the contribution to IFRS operating profit based on longer-term investment returns from China and Hong Kong combined has become more significant to the overall total, accounting for 23 per cent compared with 17 per cent one year ago. IFRS operating profit from Indonesia was 5 per cent higher (up 20 per cent on an actual exchange rate basis) and on the same basis Singapore was 6 per cent higher (up 20 per cent on an actual exchange rate basis).

In the US, life operating profit based on longer-term investment returns was up 7 per cent at £1,079 million (up 22 per cent on an actual exchange rate basis), reflecting increased profits from our variable annuity business. US equity markets rallied towards the end of 2016 and have risen further during the first half of 2017, which together with continued positive net asset flows of £2.0 billion, has led to separate account balances that were on average 16 per cent higher than in the prior year period. As a result, fee income was up 15 per cent (30 per cent on an actual exchange rate basis) at £1,145 million driven by fees earned on separate account assets. Spread-based income decreased by 6 per cent (6 per cent on an actual exchange rate basis), as anticipated, reflecting the impact of lower yields on our fixed annuity portfolio.

UK life operating profit based on longer-term investment returns increased by 1 per cent to £480 million. Within this total, the contribution from our core in-force book has remained relatively stable at £288 million (2016: £306 million). Profits from new annuity business reduced to £4 million from £27 million in the prior period, reflecting our withdrawal from this market. We have taken a number of asset and liability actions (including longevity reinsurance) in the first half of 2017 to improve portfolio efficiency which have generated combined profits of £188 million (2016: £140 million).

The increase in our operating earnings levels reflects the growth in the scale of our operations, driven primarily by positive business flows. We track the progress that we make in growing our life insurance business by reference to the scale of our obligations to our customers, which are referred to in the financial statements as policyholder liabilities. Each period these increase as we write new business and collect regular premiums from existing customers and decrease as we pay claims and policies mature. The overall scale of these policyholder liabilities is relevant in evaluation of our profit potential in that it reflects, for example, our ability to earn fees on the unit-linked element and indicates the scale of the insurance element, another key source of profitability for the Group.

^{*} Includes Group s proportionate share of the liabilities and associated flows of the insurance joint ventures and associate in Asia.

- ** Defined as movements in shareholder-backed policyholder liabilities arising from premiums (net of charges), surrenders/withdrawals, maturities and deaths.
- *** Following its sale in May 2017, the shareholder-backed policyholder liabilities and related flows for Asia exclude the value for the Korea life business. The half year 2016 comparatives have been accordingly adjusted. Focusing on the business supported by shareholder capital, which generates the majority of the life profit, in the first half of 2017 net flows into our businesses were overall positive at £1.8 billion. This was driven by our US and Asian operations, as we continue to focus on both retaining our existing customers and attracting new business to drive long-term value creation. The outflow from our UK operations primarily reflects the run-off of the in-force annuity portfolio following our withdrawal from selling new annuity business. This decrease in shareholder liabilities has been more than offset by the flows into the with-profit funds of £1.6 billion as shown in the table below. Positive investment markets in the first half have partly been offset by currency effects as sterling strengthened

over the period, increasing liabilities by £0.9 billion. In total, business flows and market movements have increased policyholder liabilities from £266.3 billion to £269.3 billion.

Policyholder liabilities and net liability flows in with-profits business*,**

UK	113,146	1,574	3,729	118,449	100,069	582	6,417	107,068	
Total Group	143,079	3,869	4,782	151,730	121,003	2,133	10,772	133,908	

^{*} Includes Group s proportionate share of the liabilities and associated flows of the insurance joint ventures and associates in Asia.

Policyholder liabilities in our with-profits business have increased by 6 per cent to £151.7 billion in the first half of 2017. This reflects the growing popularity of PruFund with consumers seeking protection from the impact of volatile market conditions. During the first half of 2017, net liability flows increased to £3.9 billion across our Asia and UK operations. As returns from these funds are smoothed and shared with customers, the emergence of shareholder profit is more gradual. The business, nevertheless, remains an important source of shareholder value.

^{**} The ratio of acquisition costs is calculated as a percentage of APE sales including with-profits sales. Acquisition costs include only those relating to shareholder-backed business. APE is defined under the section EEV Basis, New Business Results and Free Surplus Generation in this document.

We continue to maintain our preference for higher-quality sources of income such as insurance margin and fee income. We favour insurance margin because it is relatively insensitive to the equity and interest rate cycle and prefer fee income to spread income because it is more capital-efficient. In line with this approach, on a constant exchange rate basis, in the first half of 2017, insurance margin has increased by 14 per cent¹ (up 28 per cent on an actual exchange rate basis) and fee income by 14 per cent¹ (up 29 per cent on an actual exchange rate basis), while spread income declined by 5 per cent¹ (up 5 per cent on an actual exchange rate basis). Administration expenses increased to £1,131 million¹ (2016: £983 million on a constant exchange rate basis and £879 million on an actual exchange rate basis) as the business continues to expand. The expense ratio has grown from 83 basis points to 87 basis points reflecting country mix and the continued increase in US producers selecting asset-based commissions which are treated as an administrative expense in this analysis.

Asset management

Movements in asset management operating profit are also primarily influenced by changes in the scale of these businesses, as measured by funds managed on behalf of external institutional and retail customers and our internal life insurance operations.

Asset management external funds under management*,**

- * Includes Group s proportionate share in PPM South Africa and the Asia asset management joint ventures.
- ** For our asset management business the level of funds managed on behalf of third parties, which are not therefore recorded on the balance sheet, is a driver of profitability. We therefore analyse the movement in the funds under management each period, focusing between those which are external to the Group and those held by the insurance business and included on the Group balance sheet. This is analysed in note II(b) of the Additional unaudited financial information.

In the first half of 2017, average assets under management in our asset management businesses in the UK and Asia benefited from net inflows of assets and favourable markets, driving higher fee revenues. Reflecting this, IFRS operating profit from **M&G** increased by 10 per cent to £248 million and by 20 per cent at **Eastspring** (up 36 per cent on an actual exchange rate basis) to £83 million.

M&G s external assets under management have benefited from a strong recovery in net flows, reflecting improvements in investment performance and supportive markets. External net inflows totalled £7.2 billion (2016: net outflows of £7.0 billion), with strong contributions from European investors in the Optimal Income Fund, Global Floating High Yield Fund and multi-asset fund range, and from institutional clients investing in illiquid credit strategies. External assets under management at 30 June 2017 were £149.1 billion, up 9 per cent since the start of the year. Internal assets managed on behalf of Prudential s life operations also benefited from strong markets, rising 3 per cent and taking total assets under management to £281.5 billion (31 December 2016: £264.9 billion). Operating profit based on longer-term investment returns increased 10 per cent to £248 million, consistent with the year-on-year increase in average assets under management and reflecting a cost-income ratio of 53 per cent. M&G s full year cost-income ratio is typically higher than for the first half, as its cost base is weighted towards the second half of the year (Half year 2016: 52 per cent, Full year 2016: 59 percent).

Eastspring also attracted good levels of net inflows⁸ in the first half across its equity, fixed income and balanced fund range, totalling £2.3 billion. Including money market funds and the assets managed for internal life operations, Eastspring s total assets under management increased to £130.5 billion (31 December 2016: £117.9 billion), while the cost-income ratio improved to 55 per cent (2016: 56 per cent), driving a 20 per cent (36 per cent on an actual exchange rate basis) increase in operating profit based on longer-term investment returns to £83 million (2016: £69 million on a constant exchange rate basis and £61 million on an actual exchange rate basis).

Net central expenditure

Higher interest costs related to the debt issued in 2016 contributed to an increase in net central expenditure of £77 million to £419 million (2016: £342 million).

Non-operating items

Non-operating items consist of short-term fluctuations in investment returns of negative £573 million (2016: £1,580 million on a constant exchange rate basis and £1,385 million on an actual exchange rate basis), the results attaching to the sold life business in Korea of £61 million (2016: £47 million on a constant exchange rate basis and £40 million on an actual exchange rate basis), and the amortisation of acquisition accounting adjustments of £32 million (2016: £39 million on a constant exchange rate basis and £35 million on an actual exchange rate basis) arising principally from the REALIC business in 2012. Following its disposal in the first half of 2017 the Result attaching to the sold Korea life business represents the recognition upon disposal in the income statement of cumulative foreign exchange gains previously recognised in other comprehensive income, which has no overall impact on shareholders equity. The 2016 comparative figure represents the profit before tax of the Korea life business in the first half of 2016.

Short-term fluctuations in investment returns represent the most significant component of non-operating items and are discussed further below.

Short-term fluctuations in investment returns

Operating profit is based on longer-term investment return assumptions. The difference between actual investment returns recorded in the income statement and the assumed longer-term returns is reported within short-term fluctuations in investment returns. In the first half of 2017 the total short-term fluctuations in investment returns relating to the life operations were negative £704 million, comprising positive £41 million for Asia, negative £754 million in the US and positive £9 million in the UK.

In the US, Jackson provides certain guarantees on its annuity products, the value of which would typically rise when equity markets fall and long-term interest rates decline. Jackson includes the expected cost of hedging when pricing its products and charges fees for these guarantees which are used as necessary, to purchase downside protection in the form of options and futures to mitigate the effect of equity market falls, and swaps and swaptions to cushion the impact of drops in long-term interest rates. Under IFRS, accounting for the movement in the valuation of these derivatives, which are all fair valued, is asymmetrical to the movement in guarantee liabilities, which are not fair valued in all cases. Jackson designs its hedge programme to protect the economics of the business from large movements in investment markets and accepts the variability in accounting results. The negative short-term fluctuations of £754 million in the first half are mainly attributable to the net value movement in the period of the hedge instruments held to manage market exposures primarily and reflect the positive equity market performance in the US during the period.

The positive short-term fluctuations in investment returns for other operations of £131 million (2016: negative £192 million) principally reflect unrealised value movements on financial instruments.

Effective tax rates

In the first half of 2017, the effective tax rate on operating profit based on longer-term investment returns was broadly in line with the equivalent rate last year at 24 per cent (2016: 23 per cent), with the difference being mainly due to the effect of prior year adjustments in the first half of 2017.

30

The effective tax rate on the total IFRS profit was 17 per cent in the first half of 2017 (2016: negative 3 per cent), driven by the smaller negative short-term investment fluctuations in the US insurance operations, which attract tax relief at a higher rate than the rates at which profits are taxed elsewhere in the Group.

The main driver of the Group s effective tax rate is the mix of the profits between countries with higher tax rates (such as US, Indonesia and Malaysia), and countries with lower tax rates (such as Hong Kong, Singapore and the UK).

The proposed changes to the UK tax rules for utilisation of brought forward tax losses and the deductibility of interest are not expected to impact the Group s effective tax rate. No substantive US tax reform proposals which require material consideration have been issued as yet.

Total tax contribution

The Group continues to make significant tax contributions in the countries in which it operates, with £1,595 million remitted to tax authorities in the first half of 2017. This was higher than the equivalent amount of £1,293 million in the first half of 2016 due to an increase in corporation tax payments (up from £287 million to £535 million). This was principally because of increases in the US and UK, of which a significant proportion is an increase in the amount paid on profits taxable at policyholder rather than shareholder rate.

Publication of tax strategy

In the first half of 2017, the new UK requirement for large UK businesses to publish their tax strategy came into effect. Prudential s tax strategy, together with further details on tax payments made in 2016 have been made available on the Group s website.

Group and holding company cash flows

Prudential s consolidated cash flow includes the movement in cash included within both policyholders and shareholders funds, such as cash in the with-profits fund. Prudential therefore believes that it is more relevant to consider individual components of the movement in holding company cash flow which relate solely to the shareholders.

We continue to manage cash flows across the Group with a view to achieving a balance between ensuring sufficient remittances are made to service central requirements (including paying the external dividend) and maximising value to shareholders through retention and reinvestment of capital in business opportunities.

Cash remitted to the corporate centre in the first half of 2017 totalled £1,230 million, 10 per cent higher than in 2016. Asia s net remittance was £350 million in the first half of 2017 (2016: £258 million), reflecting both business growth and the effect of weaker sterling. For similar reasons, Jackson s remittance also increased to £475 million in the first half of 2017, up from £339 million paid in the first half of 2016. The remittances from UK Life and M&G were broadly in line with the first half of 2016 at £215 million (2016: £215 million) and £175 million (2016: £150 million) respectively.

Cash remitted to the corporate centre in the first half of 2017 was used to meet central costs of £226 million (2016: £199 million) and pay the 2016 second interim ordinary dividend. Reflecting these and other movements in the period, total holding company cash at 30 June 2017 was £2,657 million compared with £2,626 million at the end of 2016.

31

Capital position, financing and liquidity

Capital position

Analysis of movement in Group shareholder Solvency II surplus*

	2017 £bn Half	20	016 £bn
	year	Half year	Full year
Estimated solvency II surplus at 1 January	12.5	9.7	9.7
Operating experience	1.7	1.2	2.7
Non-operating experience (including market movements)	-	(2.4)	(1.1)
Other capital movements			
Subordinated debt issuance	-	0.7	1.2
Foreign currency translation impacts	(0.5)	0.9	1.6
Dividends paid	(0.8)	(0.9)	(1.3)
Methodology and calibration changes	-	(0.1)	(0.3)
Estimated Solvency II surplus at end of period	12.9	9.1	12.5

^{*} The methodology and assumptions used in calculating the Solvency II capital results are set out in note II (b) of Additional unaudited financial information.

The high quality and recurring nature of our operating capital generation and our disciplined approach to managing balance sheet risk has resulted in the Group s shareholders. Solvency II capital surplus being estimated at £12.9 billion^{4,5} at 30 June 2017 (equivalent to a solvency ratio of 202 per cent) compared with £12.5 billion (201 per cent) at 31 December 2016.

Prudential s designation as a Global Systemically Important Insurer (G-SII) was reaffirmed by the IAIS in November 2016, based on the updated methodology published in June 2016. Prudential is monitoring the development and potential impact of the policy measures and is continuing to engage with the PRA on the implications of the policy measures and Prudential s designation as a G-SII.

Local statutory capital

All of our subsidiaries continue to hold appropriate capital positions on a local regulatory basis. In the UK, at 30 June 2017, The Prudential Assurance Company Limited and its subsidiaries had an estimated Solvency II shareholder surplus of £5.3 billion⁹ (equivalent to a solvency ratio of 168 per cent) and a with-profits surplus¹⁰ of £4.1 billion (equivalent to a solvency ratio of 192 per cent).

Debt Portfolio

The Group continues to maintain a high-quality defensively positioned debt portfolio. Shareholders exposure to credit is concentrated in the UK annuity portfolio and the US general account, mainly attributable to Jackson s fixed annuity portfolio. The credit exposure is well diversified and 98 per cent of our UK portfolio and 97 per cent of our US portfolio are investment grade. During the first half of 2017 there were no default losses in the US or the UK portfolio and reported impairments were minimal (2016: £32 million) in the US portfolio.

Financing and liquidity

Shareholders net core structural borrowings

	2017 £m	2016 £m	
	30-Jun	30-Jun	31-Dec
Total borrowings of shareholder-financed operations	6,614	5,966	6,798
Less: Holding company cash and short-term investments	(2,657)	(2,546)	(2,626)
Net core structural borrowings of shareholder-financed operations	3,957	3,420	4,172
	20.00	228	226
Gearing ratio*	20%	22%	22%

^{*} Net core structural borrowings as a proportion of IFRS shareholders funds plus net debt Our financing and central liquidity position remained strong throughout the period. Our central cash resources amounted to £2.7 billion at 30 June 2017 (31 December 2016: £2.6 billion).

In addition to its net core structural borrowings of shareholder-financed operations set out above, the Group also has access to funding via the money markets and has in place a global commercial paper programme. As at 30 June 2017, we had issued commercial paper under this programme totalling £10 million and US\$1,058 million.

Prudential s holding company currently has access to £2.6 billion of syndicated and bilateral committed revolving credit facilities, provided by 19 major international banks, expiring between 2021 and 2022. Apart from small drawdowns to test the process, these facilities have never been drawn, and there were no amounts outstanding at 30 June 2017. The medium-term note programme, the US shelf programme (platform for issuance of SEC registered public bonds in the US market), the commercial paper programme and the committed revolving credit facilities are all available for general corporate purposes and to support the liquidity needs of Prudential s holding company and are intended to maintain a strong and flexible funding capacity.

Shareholders funds

The following table sets forth a summary of the movement in Prudential s IFRS shareholder funds:

	2017 £m 2016 £m		l6 £ m
	Half year	Half year	Full year
Profit after tax for the period	1,505	687	1,921
Exchange movements, net of related tax	(224)	806	1,161
Cumulative exchange gain of Korea life business recycled to profit and loss			
account	(61)	-	-
Unrealised gains and losses on Jackson securities classified as available for			
sale, net of related changes to deferred acquisition costs and tax	300	1,094	31
Dividends	(786)	(935)	(1,267)
Other	49	(2)	(135)
Net increase in shareholders funds	783	1,650	1,711
Shareholders funds at beginning of the period	14,666	12,955	12,955
Shareholders funds at end of the period	15,449	14,605	14,666
Shareholders value per share	597p	566p	568p
Return on Shareholders funds	24%	24%	26%

Group IFRS shareholders funds at 30 June 2017 increased by 5 per cent to £15.4 billion (31 December 2016: £14.7 billion on an actual exchange rate basis), driven by the strength of the operating result, offset by dividend payments of £786 million representing the second interim dividend for 2016. In the first half of the period, UK sterling strengthened relative to the US dollar and various Asian currencies. With approximately 48 per cent of the Group IFRS net assets denominated in non-sterling currencies, this generated a negative exchange rate movement on net assets in the period. In addition, the fall in US long-term interest rates between the start and the end of the reporting period produced unrealised gains on fixed income securities held by Jackson accounted through other comprehensive income.

Corporate transactions

Entrance into Nigeria

In July 2017 the Group acquired a majority stake in Zenith Life of Nigeria and formed exclusive bancassurance partnerships with Zenith Bank in Nigeria and Ghana. The acquisition and bancassurance partnerships will see Prudential enter the market in Nigeria, Africa's largest economy, with a population of over 180 million. This demonstrates Prudential's commitment to Africa following the launch of businesses in Ghana and Kenya in 2014, in Uganda in 2015 and Zambia in 2016.

Disposal of Korea

In May 2017, the Group completed the sale of the Group s life Insurance subsidiary in Korea, PCA Life Insurance Co., Ltd to Mirae Asset Life Insurance Co., Ltd. for KRW170 billion (equivalent to £117 million at 17 May 2017 closing rate).

33

Dividend

As in previous years, the first interim dividend for 2017 has been calculated formulaically as one third of the prior year s full year ordinary dividend. The Board has approved a first interim dividend for 2017 of 14.50 pence per share, which equates to an increase of 12 per cent over the 2016 first interim dividend.

The Group s dividend policy remains unchanged. The Board will maintain focus on delivering a growing ordinary dividend. In line with this policy, Prudential aims to grow the ordinary dividend by 5 per cent per annum. The potential for additional distributions will continue to be determined after taking into account the Group s financial flexibility across a broad range of financial metrics and an assessment of opportunities to generate attractive returns by investing in specific areas of the business.

Notes:

- ^{1.} Following its sale in May 2017, the operating results exclude the contribution of the Korea life business. All comparative results have been similarly adjusted.
- 2. Annualised operating profit after tax and non-controlling interests as percentage of opening shareholders funds.
- 3. Includes UK life insurance and M&G.
- 4. Before allowing for first interim dividend.
- The Group shareholder capital position excludes the contribution to Own Funds and the Solvency Capital Requirement from ring fenced With-Profit Funds and staff pension schemes in surplus. The solvency positions include management s estimate of transitional measures reflecting operating and market conditions at the valuation date. The estimated Group shareholder surplus would increase from £12.9 billion to £13.6 billion at 30 June 2017 if the approved regulatory transitional amount was applied instead.
- 6. Comparable to 31 December 2016 on an actual exchange rate basis.
- Operating income comprises spread income, fee income, with-profits, insurance margin and expected shareholder return.
- Net inflows exclude Asia Money Market Fund (MMF) inflows of £499 million (2016: net inflows £656 million on an actual exchange rate basis). External funds under management exclude Asia MMF balances of £8,327 million (2016: £7,421 million on an actual exchange rate basis).
- The UK shareholder capital position excludes the contribution to Own Funds and the Solvency Capital Requirement from ring fenced With-Profit Funds and staff pension schemes in surplus. The solvency positions include management s estimate of transitional measures reflecting operating and market conditions at the valuation date. The estimated UK shareholder surplus would increase from £5.3 billion to £6.0 billion at 30 June 2017 if the approved regulatory transitional amount was applied instead.
- The UK with-profits Solvency II surplus includes the PAC with-profits sub-fund, the Scottish Amicable Insurance Fund and the Defined Charge Participating Sub-Fund. The estimated solvency position allows for management s estimate of transitional measures reflecting operating and market conditions at the valuation date.

34

Explanation of Movements in Profits Before Shareholder Tax by Nature of Revenue and Charges

The following table shows Prudential s consolidated total revenue and consolidated total charges for the following periods.

	2017 £m Half year	2016 £m Half year
Earned premiums, net of reinsurance	21,158	17,394
Investment return	20,629	17,062
Other income	1,222	1,085
Total revenue, net of reinsurance	43,009	35,541
Benefits and claims and movement in unallocated surplus of with-profits funds, net of		
reinsurance	(35,442)	(30,939)
Acquisition costs and other expenditure	(5,330)	(3,563)
Finance costs: interest on core structural borrowings of shareholder-financed operations	(216)	(169)
Disposal of Korea life business:		
Cumulative exchange gain recycled from other comprehensive income	61	_
Remeasurement adjustments	5	-
Total charges, net of reinsurance	(40,922)	(34,671)
Share of profits from joint ventures and associates, net of related tax	120	86
Profit before tax (being tax attributable to shareholders and policyholders returns)*	2,207	956
Less tax charge attributable to policyholders returns	(393)	(292)
Profit before tax attributable to shareholders	1,814	664
Total tax charge attributable to policyholders and shareholders	(702)	(269)
Adjustment to remove tax charge attributable to policyholders returns	393	292
Tax (charge) credit attributable to shareholders returns	(309)	23
Profit for the period attributable to equity holders of the Company	1,505	687

^{*}This measure is the formal profit before tax measure under IFRS but it is not the result attributable to shareholders. This is because the corporate taxes of the Group include those on the income of consolidated with-profits and unit-linked funds that, through adjustments to benefits, are borne by policyholders. These amounts are required to be included in the tax charge of the Company under IAS 12. Consequently, the profit before all taxes measure (which is determined after deducting the cost of policyholder benefits and movements in the liability for unallocated surplus of the PAC with-profits fund after adjusting for taxes borne by policyholders) is not representative of pre-tax profits attributable to shareholders.

Earned premiums, net of reinsurance

	2017 £m	2016 £m
	Half year	Half year
Asia operations	7,454	5,715
US operations	7,829	6,818
UK operations	5,875	4,861
Total	21,158	17,394

Earned premiums, net of reinsurance, for insurance operations totalled £21,158 million in half year 2017 compared to £17,394 million in half year 2016. The increase of £3,764 million for half year 2017 was driven by increases of

£1,739 million in the Asia operations, £1,011 million in the US operations and £1,014 million in the UK operations.

a) Asia

Earned premiums in Asia, net of reinsurance in half year 2017 were £7,454 million, an increase of 30 per cent compared to £5,715 million in half year 2016, on an actual exchange rate basis. Excluding the impact of exchange translation, earned premiums in Asia increased by 15 per cent compared to £6,473 million on a constant exchange rate basis in half year 2016.

The premiums reflect the aggregate of single and recurrent premiums of new business sold in the period and premiums on annual business sold in previous periods. The growth in earned premiums reflects increases for both factors.

35

We continue to favour new business premiums that are long-term and recurring in nature and with a high proportion of health and protection, as these are characteristics that mean our income is less sensitive to market cyclicality and variability in economic conditions.

Sales increased in the first half of 2017, highlighting the consistency in performance from our broad and diversified new business franchise. As reported previously, the business took the decision in the first half of 2016 to pull back from the third-party broker channel in Hong Kong, which is reflected in a decline in sales in this market. Excluding the broker channel in Hong Kong, sales in Asia have increased, reflecting the improved performance in our agency and bancassurance channels.

We have continued to see strong demand for our products in China reflecting our efforts to grow health and protection sales through the agency channel. In Hong Kong, we are also increasing our focus on health and protection. As expected, we are starting to see some moderation in the level of sales from Mainland China into Hong Kong, which is expected to continue in the second half of the year. In Indonesia, sales have stabilised as we continue to take steps to broaden our product offering, improve our productivity and accelerate the pace of business automation. In Singapore and Malaysia, we are broadening our product offering and increasing the productivity of our distribution channels. Vietnam, India and Taiwan also made strong contributions to sales.

b) United States

Earned premiums, net of reinsurance in the US increased by 15 per cent from £6,818 million in half year 2016 to £7,829 million in half year 2017. Excluding the impact of exchange translation, earned premiums in the US increased by 1 per cent compared with £7,754 million on a constant exchange rate basis in half year 2016, including an increase in wholesale business.

Although industry volumes in the variable annuity market remain subdued following the declines in 2016, Jackson has continued to outperform the market¹ with an increase in variable annuity sales in the first half of 2017, reflecting the competitive strengths of Jackson s product offering and distribution capability. Total net inflows into Jackson s separate account asset balances, which drive fee-based earnings on variable annuity business, remain positive at £2.0 billion (half year 2016: £2.6 billion).

c) United Kingdom

Earned premiums, net of reinsurance for UK operations, increased from £4,861 million in half year 2016 to £5,875 million in half year 2017 primarily due to the sales of products that offer access to the PruFund s smoothed multi-asset fund returns.

Our UK business has emerged successfully from regulatory change in the retail savings and retirement market, driven by the strength of investment performance of its with-profits fund and the transparent structure of PruFund, with its distinctive smoothing process. By extending access to the PruFund investment option to a wider range of product wrappers, we have been able to achieve rapid growth in market segments such as flexible personal pensions and ISAs.

36

Investment return

	2017 £m	2016 £m
	Half year	Half year
Asia operations	4,803	2,683
US operations	8,336	2,528
UK operations	7,440	11,950
Unallocated corporate	50	(99)
Total	20,629	17,062

Investment return, principally comprises interest income, dividends, investment appreciation/depreciation (realised and unrealised gains and losses) on investments designated as fair value through profit and loss and realised gains and losses, including impairment losses, on securities designated as available-for-sale. Movements in unrealised appreciation/depreciation of Jackson s debt securities designated as amortised cost and available-for-sale are not reflected in investment return but are recorded in other comprehensive income.

Allocation of investment return between policyholders and shareholders

Investment return is attributable to policyholders and shareholders. A key feature of the accounting policies under IFRS is that the investment return included in the income statement relates to all investment assets of the Group, irrespective of whether the return is attributable to shareholders, or to policyholders or the unallocated surplus of with-profits funds, the latter two of which have no direct impact on shareholders profit. The table below provides a breakdown of the investment return for each regional operation attributable to each type of business.

	2017 £m	2016 £m
	Half year	Half year
Asia operations		
Policyholder returns		
Assets backing unit-linked liabilities	1,534	220
With-profits business	2,509	1,726
	4,043	1,946
Shareholder returns	760	737
Total	4,803	2,683
US operations		
Policyholders returns assets held to back (separate account) unit-linked liabilities	8,818	2,069
Shareholder returns	(482)	459
Total	8,336	2,528
UK operations		
Policyholder returns		
Scottish Amicable Insurance Fund (SAIF)	247	446
Assets held to back unit-linked liabilities	1,269	1,122
With-profits fund (excluding SAIF)	5,019	6,756
	6,535	8,324
Shareholder returns	905	3,626
Total	7,440	11,950

Unallocated corporate

Shareholder returns	50	(99)
Group Total		
Policyholder returns	19,396	12,339
Shareholder returns	1,233	4,723
Total	20,629	17,062

Policyholder returns

The returns as shown in the table above are delineated between those returns allocated to policyholders and those allocated to shareholders. In making this distinction, returns allocated to policyholders are those from investments in which shareholders have no direct economic interest, namely:

Unit-linked business in the UK and Asia and Scottish Amicable Insurance Fund (SAIF) in the UK, for which the investment returns are wholly attributable to policyholders;

Separate account business of US operations, the investment returns of which are also wholly attributable to policyholders; and

With-profits business (excluding SAIF) in the UK and Asia (in which the shareholders—economic interest, and the basis of recognising IFRS basis profits, is restricted to a share of the actuarially determined surplus for distribution (in the UK 10 per cent)). Except for this surplus the investment returns of the with-profits funds are attributable to policyholders (through the asset-share liabilities) or the unallocated surplus, which is accounted for as a liability under IFRS 4.

The investment returns related to the types of business mentioned above do not impact shareholders profits directly. However there is an indirect impact, for example, investment-related fees or the effect of investment returns on the shareholders share of the cost of bonuses of with-profits funds.

Investment returns for unit-linked and similar products have a reciprocal impact on benefits and claims, with an increase/decrease in market returns on the attached pool of assets affecting policyholder benefits on these products. Similarly for with-profits funds there is a close correlation between increases or decreases in investment returns and the level of combined charge for policyholder benefits and movement on unallocated surplus that arises from such returns.

Shareholder returns

For shareholder-backed non-participating business in the UK (comprising its shareholder-backed annuity and other non-linked non-participating business) and of the Asia operations, the investment returns are not directly attributable to policyholders and therefore, impact shareholders profit directly. However, for UK shareholder-backed annuity business where the durations of asset and liability cash flows are closely matched, the discount rate applied to measure liabilities to policyholders (under grandfathered UK GAAP and under IFRS 4) reflects movements in asset yields (after allowances for the future defaults) of the backing portfolios. Therefore, the net impact on the shareholders profits of the investment returns of the assets backing liabilities of the UK shareholder-backed annuity business is determined after taking into account the consequential effect on the movement in policyholder liabilities.

Changes in shareholders investment returns for US operations reflect primarily movements in the investment income, and realised gains and losses together with movements in the value of the derivative instruments held to manage interest rate exposures and durations within the general account (including variable annuity and fixed index annuity guarantees), GMIB reinsurance and equity derivatives held to manage the equity risk exposure of guarantee liabilities. Separately, within Benefits and Claims, there is a charge for the allocation made to policyholders through the application of crediting rates for Jackson s relevant lines of business.

The majority of the investments held to back the US general account business are debt securities for which the available-for-sale designation is applied for IFRS basis reporting. Under this designation the return included in the income statement reflects the aggregate of investment income and realised gains and losses (including impairment

losses). However, movements in unrealised appreciation or depreciation are recognised in other comprehensive income. The return on these assets is attributable to shareholders.

Reasons for period-on-period changes in investment returns

With two exceptions, all Prudential investments are carried at fair value in the statement of financial position with fair value movements, which are volatile from period to period, recorded in the income statement. The exceptions are for:

(i) debt securities in the general account of US operations, the return on which is attributable to shareholders and which are accounted for on an IAS 39 available-for-sale basis. In this respect, realised

38

gains and losses (including impairment losses) are recorded in the income statement, while movements in unrealised appreciation (depreciation) are booked as other comprehensive income. As a result, the changes in unrealised fair value of these debt securities are not reflected in Prudential s investment returns in the income statement. The unrealised gains and losses in the income statement of US operations primarily arise on the assets of the US separate account business; and

(ii) loans and receivables, which are generally carried at amortised cost (unless designated at fair value through profit and loss).

Subject to the effect of these two exceptions, the period-on-period changes in investment returns primarily reflect the generality of overall market movements for equities, debt securities and, in the UK, for investment property mainly held by with-profits funds. In addition, for Asia and US separate account business, foreign exchange rates affect the sterling value of the translated income. Consistent with the treatment applied for other items of income and expenditure, investment returns for overseas operations are translated at average exchange rates.

a) Asia

The table below provides an analysis of investment return attributable to Asia operations for the periods presented:

	2017 £m	2016 £m
	Half year	Half year
Interest/dividend income (including foreign exchange gains and losses)	783	719
Investment appreciation*	4,020	1,964
Total	4,803	2,683

^{*} Investment appreciation comprises net realised and unrealised gains and losses on the investments. In Prudential s Asia operations, equities and debt securities accounted for 38 per cent and 55 per cent, respectively of the total investment portfolio at 30 June 2017. The remaining 7 per cent of the total investment portfolio was primarily loans and deposits with credit institutions. At 30 June 2016, the total proportion of the investment portfolio invested in equities and debt securities was 37 per cent and 58 per cent respectively, with the remaining 5 per cent similarly invested in loans and deposits with credit institutions. In Asia, investment returns increased from £2,683 million in half year 2016 to £4,803 million in half year 2017. This increase in investment returns primarily reflects investment appreciation of £2,056 million from £1,964 million in half year 2016 to £4,020 million in half year 2017 due to favourable movements in equity markets across the region and gains on bonds in certain business units from falling interest rates.

b) United States

The table below provides an analysis of investment return attributable to US operations for the periods presented:

	2017 £m	2016 £m
	Half year	Half year
Investment return of investments backing US separate account liabilities	8,818	2,069

 Other investment returns
 (482)
 459

 Total
 8,336
 2,528

In the US, investment returns increased from £2,528 million in half year 2016 to £8,336 million in half year 2017. This £5,808 million favourable change arose from an increase of £6,749 million in the investment returns on investments backing variable annuity separate account liabilities from a gain of £2,069 million in half year 2016 to a gain of £8,818 million in half year 2017 and this increase was partially offset by a decrease in other investment returns from a gain of £459 million to a loss of £482 million. The primary driver for the increase in investment returns on investments backing variable annuity separate account liabilities, as compared to the same period in 2016, was the more favourable movement in the US equity markets in half year 2017 than that experienced in half year 2016. The decrease of £941 million in other investment returns reflects the value movements in derivatives held to manage interest rate and equity risk exposures as noted previously and as discussed in note B1.2 to the unaudited condensed consolidated interim financial statements.

c) United Kingdom

The table below provides an analysis of investment returns attributable to UK operations for the periods presented:

	2017 £m	2016 £m
	Half year	Half year
Interest/dividend income	3,442	3,363
Investment appreciation (depreciation) and other investment returns	3,998	8,587
Total	7,440	11,950

In Prudential s UK operations, equities, debt securities and investment properties accounted for 29 per cent, 47 per cent and 8 per cent, respectively of the total investment portfolio at 30 June 2017. The remaining 16 per cent of the total investment portfolio at 30 June 2017 comprised loans, deposits with credit institutions, investment in partnerships in investment pools and derivative assets. At 30 June 2017, the total proportion of the investment portfolio held in equities, debt securities and investment properties was of a similar magnitude to that as at 30 June 2016. The decrease in investment appreciation and other investment returns from a gain of £8,587 million in half year 2016 to a gain of £3,998 million in half year 2017 primarily reflects the more significant gains on bonds in the prior period due to the fall in UK gilt yields in the first half of 2016. The investment appreciation in half year 2017 primarily reflects valuation movement due to the favourable equity markets during the period.

d) Unallocated corporate and intragroup elimination

The investment returns for unallocated corporate and intragroup elimination increased by £149 million from a loss of £99 million in half year 2016 to a gain of £50 million in half year 2017. The returns in the period include the unrealised value movements on financial instruments and foreign exchange items.

Benefits and claims and movement in unallocated surplus of with-profits funds, net of reinsurance

	2017 £m Half year	2016 £m Half year
Asia operations*	(9,281)	(6,064)
US operations	(15,056)	(9,704)
UK operations*	(11,105)	(15,171)
Total	(35,442)	(30.939)

^{*} After elimination of intra-group transactions between these two segments.

Benefits and claims represent payments, including final bonuses, to policyholders in respect of maturities, surrenders and deaths plus the change in technical provisions (which primarily represents the movement in amounts owed to policyholders). Benefits and claims are amounts attributable to policyholders. The movement in unallocated surplus of with-profits funds represents the transfer to (from) the unallocated surplus each year through a charge (credit) to the income statement of the annual excess (shortfall) of income over expenditure of the with-profits funds, after declaration and attribution of the cost of bonuses to policyholders and shareholders.

The underlying reasons for the period to period changes in benefits and claims and movement in unallocated surplus in each of Prudential s regional operations are changes in the incidence of claims incurred, increases or decreases in policyholders liabilities, and movements in unallocated surplus of with-profits funds.

The charge for total benefits and claims and movement in unallocated surplus, net of reinsurance, of with-profits funds increased to £35,442 million in half year 2017 from £30,939 million in half year 2016. The amounts of the period to period change attributable to each of the underlying reasons as stated above are shown below:

	2017 £m	2016 £m
	Half year	Half year
Claims incurred, net of reinsurance	(15,069)	(12,196)
Increase in policyholder liabilities, net of reinsurance	(19,443)	(18,450)
Movement in unallocated surplus of with-profits funds	(930)	(293)
Benefits and claims and movement in unallocated surplus, net of reinsurance	(35,442)	(30,939)

The charge for benefits and claims and movements in unallocated surplus, net of reinsurance of £35,442 million for half year 2017 (half year 2016: £30,939 million) shown in the table above includes the effect of accounting for investment contracts without discretionary participation features (as defined by IFRS 4) in accordance with IAS 39 to reflect the deposit nature of the arrangement.

Additionally, the movement in policyholder liabilities and unallocated surplus of with-profits funds represents the amount recognised in the income statement and therefore excludes the effect of foreign exchange translation differences on the policyholder liabilities of foreign subsidiaries and the movement in liabilities arising on acquisitions and disposals of subsidiaries in the period.

The movement in policyholder liabilities recognised in the income statement includes reserving for inflows from premiums net of upfront charges, release of liabilities for claims paid on surrenders, withdrawals, maturities and deaths, change due to investment return to the extent of the amounts allocated to policyholders or reflected in the measurement of the policyholder liabilities and other changes in the liability measurement.

However, the principal driver for the period on period variations in the increases and decreases in policyholder liabilities is the investment return element due to the inherent nature of market fluctuations.

These variations are driven by changes to investment returns reflected in the balance sheet measurement of liabilities for Prudential s with-profits, SAIF and unit-linked policies (including the US separate account business). In addition, for those liabilities under IFRS, in particular liabilities relating to the UK annuity business, where the measurement reflects the yields on assets backing the liabilities, the period to period changes in investment yields also contribute significantly to variations in the measurement of policyholder liabilities. The principal driver for variations in the change in unallocated surplus of with-profits funds is the value movements on the investment assets of the with-profits funds to the extent not reflected in the policyholder liabilities.

An analysis of statement of financial position movements in policyholder liabilities and unallocated surplus of with-profits funds is provided in note C4.1 to the unaudited condensed consolidated financial statements. The policyholder liabilities shown in the analysis in note C4.1 are gross of reinsurance and include the full movement in the period of investment contracts without discretionary participating features (as defined in IFRS 4). Further, this analysis has been prepared to include the Group s share of the policyholder liabilities of the Asia joint ventures that are accounted for on an equity method basis in the Group s financial statements.

The principal variations in the increases or decreases in policyholder liabilities and movements in unallocated surplus of with-profits funds for each regional operation are discussed further below.

a) Asia

In half year 2017, the charge for benefits and claims and movement in unallocated surplus of with-profits funds totalled £9,281 million, representing an increase of £3,217 million compared to £6,064 million in half year 2016. The amounts of the period to period change attributable to each of the underlying reasons are shown below:

	2017 £m	2016 £m
	Half year	Half year
Claims incurred, net of reinsurance	(2,495)	(1,988)

Increase in policyholder liabilities, net of reinsurance	(6,291)	(4,502)
Movement in unallocated surplus of with-profits funds	(495)	426
Benefits and claims and movement in unallocated surplus, net of reinsurance	(9,281)	(6,064)
The growth in policyholder liabilities reflected the increase due to the combined growth of	new husiness an	d the

The growth in policyholder liabilities reflected the increase due to the combined growth of new business and the in-force books in the region.

The variations in the increases or decreases in policyholder liabilities in individual periods were however, primarily due to movements in investment returns. This was as a result of asset value movements, which are reflected in the unit value of the unit-linked policies that represent a significant proportion of Asian business. In addition, the policyholder liabilities of the Asian operations—with-profits policies also fluctuated with the investment performance of the funds.

b) United States

Except for institutional products and certain term annuities which are classified as investment products under IAS 39, the products are accounted for as insurance contracts for IFRS reporting purposes. On this basis of reporting, deposits into these products are recorded as premiums while, withdrawals and surrenders are included in benefits and claims, and the resulting net movement is recorded under other reserve movements within benefits and claims. Benefits and claims also include interest credited to policyholders in respect of deposit products less fees charged on these policies.

In half year 2017, the accounting charge for benefits and claims increased by £5,352 million to £15,056 million compared to £9,704 million in the same period in the prior year. The amounts of the period to period change attributable to each of the underlying reasons are described below:

	2017 £ m	2016 £m
	Half year	Half year
Claims incurred, net of reinsurance	(6,962)	(5,007)
Increase in policyholder liabilities, net of reinsurance	(8,094)	(4,697)
Benefits and claims, net of reinsurance	(15,056)	(9,704)

The period-on-period movement in claims incurred for US operations as shown in the table above also includes the effect of translating the US results into pounds sterling at the average exchange rates for the relevant periods.

The charges in each period comprise amounts in respect of variable annuity and other business. There are two principal factors that contribute to the variations in the charge in any given period First, the level of net flows into the business (comprising premiums less maturities and surrenders), which for half year 2017 were £1,958 million compared to £2,855 million for half year 2016. The second principal effect is the investment returns on the assets backing the policyholder liabilities, which has increased during the period primarily due to favourable equity markets in the US. In particular, the investment returns on the assets backing the variable annuity separate account liabilities increased from £2,069 million in half year 2016 to £8,818 million in half year 2017.

c) United Kingdom

The overall charge for benefits, claims and the transfer to unallocated surplus decreased from £15,171 million charge in half year 2016 to £11,105 million in half year 2017. The amounts of the period to period change attributable to each of the underlying reasons are shown below, together with a further analysis of the change in policyholder liabilities by type of business:

	2017 £m Half year	2016 £m Half year
Claims incurred, net of reinsurance	(5,615)	(5,201)
(Increase) decrease in policyholder liabilities, net of reinsurance:		
SAIF	179	13
Shareholder-backed annuity business	523	(2,692)
Unit-linked and other non-participating business	(826)	(488)
With-profits (excluding SAIF)	(4,934)	(6,084)
	(5,058)	(9,251)

Movement in unallocated surplus of with-profits funds (432) (719)
Benefits and claims and movement in unallocated surplus, net of reinsurance (11,105) (15,171)
Claims incurred in the UK operations of £5,615 million in half year 2017 represented an increase from £5,201 million

incurred in half year 2016.

As has been explained above, the principal driver for variations in amounts allocated to the policyholders is changes to investment returns.

In aggregate, as a result of the lower market returns in half year 2017 compared to half year 2016 there has been a corresponding impact on benefits and claims and movements in unallocated surplus of with-profits funds in this half year, moving from a net charge of £15,171 million in half year 2016 to a net charge of £11,105 million in half year 2017.

SAIF is a ring-fenced fund with no new business written. The decrease in policyholder liabilities in SAIF reflects the run off of the underlying liabilities. The variations from period to period are, however, affected by the market valuation movement of the investments held by SAIF, which are wholly attributable to policyholders.

42

For shareholder-backed annuity business, the decreases/(increases) in policyholder liabilities reflect the effect of altered investment yield reflected in the discount rate applied in the measurement of the liabilities and other altered assumptions where relevant, together with net flows into this line of business. Following the withdrawal from selling non-profit retail annuities which have higher capital requirements than other lines of business, net flows were negative in the period thereby reducing policyholder liabilities.

For unit-linked business, the variations in the increases in the related policyholder liabilities were primarily due to the movement in the market value of the unit-linked assets as reflected in the unit value of the unit-linked policies.

The part of Prudential where variations in amounts attributed to policyholder liabilities and unallocated surplus are most significant is the UK with-profits business (excluding SAIF). The liabilities for UK with-profits policyholders are determined on an asset-share basis that incorporates the accumulation of investment returns and all other items of income and outgoings that are relevant to each policy type. Accordingly, movement in the policyholder liabilities in the income statement will fluctuate with the investment returns of the fund. Separately, the excess of assets over liabilities of the fund represents the unallocated surplus. This surplus will also fluctuate on a similar basis to the market value movement on the investment assets of the funds with the movement reflected in the income statement. In addition, other items of income and expenditure affect the level of movement in policyholder liabilities (to the extent reflected in asset shares) and unallocated surplus.

The correlation between total net income (loss) before benefits and claims and movement in unallocated surplus, on the one hand, and the (charge) credit for benefits and claims and movement in unallocated surplus, on the other, for the UK component of the PAC with-profits fund (excluding SAIF) principally arises due to the following factors:

- (a) Investment returns included in full in the income statement and are attributable either to contracts or unallocated surplus.
- (b) Investment returns, to the extent attributable to contracts, directly affect asset-share liabilities, which are reflected in the income statement through changes in policyholder liabilities.
- (c) Investment returns, to the extent attributable to unallocated surplus, form the majority part of the movement in such surplus in the income statement.

Separately, the cost of current year bonuses which is attributable to policyholders is booked within the movement in policyholder liabilities. One-ninth of the declared cost of policyholders bonus is attributable to shareholders and represents the shareholders profit. Both of these amounts, by comparison with the investment returns, movement in other constituent elements of the change in policyholder liabilities and the change in unallocated surplus, are relatively stable from period to period.

The surplus for distribution in future years will reflect the aggregate of policyholder bonuses and the cost of bonuses attributable to shareholders, which is currently set at 10 per cent. In general, the policyholder bonuses comprise the aggregate of regular and final bonuses. When determining policy payouts, including final bonuses, Prudential considers asset shares of specimen policies. Where policies are invested in one of the PruFund Range of Funds, the approach differs; such policies participate in profits by means of an increase in the unit price of the selected investment fund.

Prudential does not take into account the surplus assets of the long-term fund, or the investment returns, in calculating asset shares. Asset-shares are used in the determination of final bonuses, together with requirements concerning treating customers fairly, the need to smooth claim values and payments from year to year and competitive considerations.

In the unlikely circumstance that the depletion of excess assets within the long-term fund was such that Prudential s ability to treat its customers fairly was adversely affected, it might become necessary to restrict the annual distribution to shareholders or to contribute shareholders funds to the long-term funds to provide financial support.

43

Acquisition costs and other expenditure

	2017 £m	2016 £m
	Half year	Half year
Asia operations	(2,200)	(1,769)
US operations	(1,234)	(598)
UK operations	(1,947)	(1,223)
Unallocated corporate and intragroup elimination	51	27
Total	(5,330)	(3,563)

Total acquisition costs and other expenditure of £5,330 million in half year 2017 were 50 per cent higher than the £3,563 million incurred in half year 2016. In general, acquisition costs and other expenditure comprise acquisition costs incurred for insurance policies, change in deferred acquisition costs, operating expenses and movements in amounts attributable to external unit holders. Movements in amounts attributable to external unit holders are in respect of the funds managed on behalf of third parties which are consolidated but have no recourse to the Group and reflect the change in the overall returns in these funds in the period.

a) Asia

Total acquisition costs and other expenditure for Asia in half year 2017 were £2,200 million representing an increase of £431 million compared with £1,769 million in half year 2016. The increase of £431 million includes an exchange translation impact of £230 million. Excluding the currency volatility, the total acquisitions and other expenditure increased by £201 million from half year 2016 to half year 2017.

The period on period increase primarily reflects increased acquisition costs, net of change in deferred acquisition costs following a rise in sales in the period together with increases in other operating expenses as the business continues to expand.

b) United States

Total acquisition costs and other expenditure for the US of £1,234 million in half year 2017 represented an increase of £636 million against the £598 million incurred in half year 2016. The increase of £636 million includes an exchange translation impact of £82 million. Excluding the currency volatility, total acquisition costs and other expenditure increased by £554 million from half year 2016 to half year 2017.

The period on period increase primarily reflects changes in the amortisation of deferred acquisition costs in the income statement which, excluding the impact of currency volatility, increased by £436 million from a credit of £431 million (on a constant exchange rate basis) in half year 2016 to a charge of £5 million in half year 2017. A significant element is due to the amortisation attaching to the varying level of short-term fluctuations in investment returns in each period.

c) United Kingdom

Total acquisition costs and other expenditure for the UK increased by 59 per cent from £1,223 million in half year 2016 to £1,947 million in half year 2017. This increase arose primarily from the increase in the charge for investment gains attributable to external unit-holders relating to funds managed on behalf of third parties which are consolidated but have no recourse to the Group, such charges increased by £549 million from £121 million in half year 2016 to £670 million in half year 2017.

d) Unallocated corporate and intragroup elimination

Other net expenditure comprising a credit of £51 million in half year 2017 increased compared to the credit of £27 million in half year 2016. Other net expenditure comprises both the other expenditure of the unallocated corporate and elimination of intragroup income and expenses such as the asset management fees charged by the Group s asset management businesses to the insurance operations.

Exchange Rate Information

Prudential publishes its consolidated financial statements in pounds sterling. References in this document to US dollars, US\$, \$ or ¢ are to US currency, references to pounds sterling, \$, pounds, pence or p are to UK are 100 pence to each pound) and references to Euro or are to the single currency adopted by the participating members of the European Union. The following table sets forth for each period the average of the noon buying rates on the last business day of each month of that period, as certified for customs purposes by the Federal Reserve Bank of New York, for pounds sterling expressed in US dollars per pound sterling for each of the reported periods. Prudential has not used these rates to prepare its consolidated financial statements.

Period	Average rate
Six months ended 30 June 2016	1.43
Twelve months ended 31 December 2016	1.35
Six months ended 30 June 2017	1.26

The following table sets forth the high and low noon buying rates for pounds sterling expressed in US dollars per pound sterling for each of the previous six months:

	High	Low
February 2017	1.26	1.24
March 2017	1.26	1.22
April 2017	1.29	1.24
May 2017	1.30	1.28
June 2017	1.30	1.26
July 2017	1.31	1.29

On 4 August 2017, the latest practicable date prior to this filing, the noon buying rate was £1.00 = \$1.30.

EEV Basis, New Business Results and Free Surplus Generation

In addition to IFRS basis results, Prudential s filings with the UK Listing Authority, the Stock Exchange of Hong Kong, the Singapore Stock Exchange and Group Annual Reports include reporting by Key Performance Indicators (KPIs). These include results prepared in accordance with the European Embedded Value (EEV) Principles and Guidance issued by the European Insurance CFO Forum, New Business and Free Surplus Generation measures.

The EEV basis is a value-based method of reporting in that it reflects the change in the value of in-force long-term business over the accounting period. This value is called the shareholders—funds on the EEV basis which, at a given point in time, is the value of future cash flows expected to arise from the current book of long-term insurance business plus the net worth (based on statutory solvency capital or economic capital where higher and free surplus) of Prudential s life insurance operations. Prudential publishes its EEV results semi-annually in the UK, Hong Kong and Singapore markets.

New business results are provided as an indicative volume measure of transactions undertaken in the reporting period that have the potential to generate profits for shareholders. New business results are categorised as single premiums and annual regular premiums. New business results are also summarised by annual premium equivalents (APE) which are calculated as the aggregate of regular new business amounts and one-tenth of single new business amounts. The

amounts are not, and are not intended to be, reflective of premium income recorded in the IFRS income statement. EEV basis new business profits and margins are also published semi-annually.

Underlying free surplus generation is used to measure the internal cash generation by our business units. For the insurance operations it represents amounts maturing from the in-force business during the period less investment in new business and excludes other non-operating items. For asset management it equates to post-tax IFRS operating profit based on longer-term investment return for the period.

45

Additional Information on Liquidity and Capital Resources

Prudential Capital operates a central treasury function for Prudential, which has overall responsibility for managing Prudential s capital funding program as well as its central cash and liquidity positions. Prudential arranges the financing of each of its subsidiaries primarily by raising external finance either at the parent company level or at the operating company level.

After making sufficient enquiries the directors of Prudential have a reasonable expectation that the Company and the Group have adequate resources to continue their operations for a period of at least 12 months from the date that the financial statements are approved.

Liquidity sources

The parent company including the central finance subsidiaries held cash and short-term investments of £2,657 million as at 30 June 2017 and £2,626 million as at 31 December 2016. The sources of cash in half year 2017 included dividends, loans and net cash amounts received from operating subsidiaries. Prudential received £1,230 million in net cash remittances from business units in half year 2017, compared with £1,118 million received in half year 2016. These remittances primarily comprise dividends from business units and the shareholders statutory transfer from the PAC long-term with-profits fund (UK Life Fund) relating to earlier bonus declarations.

Dividends, loans and net cash amounts received from subsidiaries

Under UK company law, dividends can only be paid if a company has distributable reserves sufficient to cover the dividend. In PAC, Prudential s largest operating subsidiary, distributable reserves arise from the emergence of profits from the company s long-term business. For the company s with-profits business the profits reflect the profit transfer to shareholders that occurs upon the declaration of bonuses to policyholders of with-profit products. Prudential s insurance and fund management subsidiaries ability to pay dividends and loans to the parent company is restricted by various laws and regulations. Jackson is subject to state laws that limit the dividends payable to its parent company. Dividends in excess of these limitations generally require approval of the state insurance commissioner. The table below shows the dividends, loans and other net cash amounts received by Prudential from the principal operating subsidiaries for the first half of 2017 and 2016.

	2017 £ m	2016 £m
	Half year	Half year
Asia Operations	350	258
US Operations	475	339
UK Life	215	215
M&G	175	150
Prudential Capital	15	25
Other UK	-	131
Total	1,230	1,118

Each of Prudential s main operations generates sufficient profits to pay dividends to the parent. The amount of dividends paid by the operations is determined after considering the development, growth and investment requirements of the operating businesses. Prudential does not believe that the legal and regulatory restrictions on the ability of any one of its businesses to pay dividends to the parent, constitutes a material limitation on the ability of Prudential plc to meet its cash obligations.

Consolidated Cash Flows

The discussion that follows is based on the consolidated statement of cash flows prepared under IFRS and presented in Prudential s unaudited condensed consolidated interim financial statements.

Net cash outflows in the first half of 2017 were £140 million. This amount comprised inflows of £90 million from operating activities and £757 million from investing activities, less outflows of £987 million from financing activities. During the first half of 2016 net cash inflows were £57 million comprising inflows of £803 million from operating activities, less outflows of £334 million from investing activities and £412 million from financing activities.

46

As at 30 June 2017, the Group held cash and cash equivalents of £9,893 million compared with £10,065 million at 31 December 2016, an decrease of £172 million (representing net cash outflows of £140 million outlined above, and the effect of exchange rate changes of £32 million).

Contingencies and Related Obligations

Details of the main changes to Prudential s contingencies and related obligations that have arisen in the six month period ended 30 June 2017 are set out in note D2 to the unaudited condensed consolidated interim financial statements.

Derivative Financial Instruments

Details of the uses of derivative financial instruments by Prudential are as provided in the Group s 2016 annual report on Form 20-F.

47

Risk Management

1. Introduction

We continue to operate in a global environment of political uncertainty, although financial markets have remained resilient through the first half of the year. As we position ourselves, we remain mindful of the uncertain environment from a political, economic and social perspective.

As in previous years, we continue to maintain a strong and sustained focus on planning for the possibility of, and ultimately managing, the market volatility and macroeconomic uncertainty arising from the global environment. Our Risk Management Framework and risk appetite have allowed us to successfully control our risk exposure throughout the year. Our governance, processes and controls enable us to deal with the uncertainty ahead in order to continue helping our customers achieve their long-term financial goals.

Our results show that, even in times of such unpredictability, we can generate value for our shareholders by selectively taking exposure to risks that are adequately rewarded and that can be appropriately quantified and managed. We retain risks within a clearly defined risk appetite, where we believe doing so contributes to value creation and the Group is able to withstand the impact of an adverse outcome. For our retained risks, we ensure that we have the necessary capabilities, expertise, processes and controls to appropriately manage the exposure.

This section explains the main risks inherent in our business and how we manage those risks, with the aim of ensuring we maintain an appropriate risk profile.

2. Risk governance, culture and our risk management cycle

Prudential defines risk as the uncertainty that we face in successfully implementing our strategies and objectives. This includes all internal or external events, acts or omissions that have the potential to threaten the success and survival of the Group. Accordingly, material risks will be retained selectively where we think there is value to do so, and where it is consistent with the Group s risk appetite and philosophy towards risk-taking.

The following section provides more detail on our risk governance, culture and risk management process.

a. Risk governance

Our risk governance comprises the organisational structures, reporting relationships, delegation of authority, roles and responsibilities, and risk policies that the Group Head Office and our business units establish to make decisions and control their activities on risk-related matters. This encompasses individuals, Group-wide functions and committees involved in managing risk.

i. Risk committees and governance structure

Our Risk governance structure is led by the Group s Risk Committee, supported by independent non-executives on risk committees of major subsidiaries. These committees monitor the development of the risk management framework, the Group s risk appetites, limits, and policies, as well as its risk culture. We have a comprehensive risk management cycle

in place to identify, measure, manage and monitor our risk exposures.

In addition to our risk committees, there are various executive risk forums to ensure risk issues are shared and considered across the Group. These are led by the Group Executive Risk Committee which is supported by a number of specific sub-committees including security and information security where specialist skills and knowledge are required.

ii. Risk Management Framework

The Group s Risk Management Framework has been developed to monitor and manage the risk of the business at all levels and is owned by the Board. The aggregate Group exposure to the key risk drivers is monitored and managed by the Group Risk function which is responsible for reviewing, assessing and reporting on the Group s risk exposure and solvency position from the Group economic, regulatory and ratings perspectives.

48

The Framework requires all our businesses and functions to establish processes for identifying, evaluating and managing the key risks faced by the Group the Risk Management Cycle (see below) is based on the concept of the three lines of defence, comprising risk taking and management, risk control and oversight, and independent assurance.

A major part of the Risk Management Cycle is the annual assessment of the Group s risks which are considered key. These key risks range from risks associated with the economic, market, political and regulatory environment; those that we assume when writing our insurance products and by virtue of the investments we hold; and those that are inherent in our business model and its operation. This is used to inform risk reporting to the risk committees and the Board for the year.

iii. Risk appetite, limits and triggers

The extent to which we are willing to take risk in the pursuit of our objective to create shareholder value is defined by a number of risk appetite statements, operationalised through measures such as limits, triggers and indicators. The Group risk appetite is approved by the Board and is set with reference to economic and regulatory capital, liquidity and earnings volatility. The Group risk appetite is aimed at ensuring that we take an appropriate level of aggregate risk and covers all risks to shareholders, including those from participating and third party business.

We have no appetite for material losses (direct or indirect) suffered as a result of failing to develop, implement and monitor appropriate controls to manage operational risks. Group limits operate within the risk appetite to constrain the material risks, while triggers and indicators provide further constraint and ensure escalation. The Group Chief Risk Officer determines the action to be taken upon all breaches of Group limits.

The Group Risk function is responsible for reviewing the scope and operation of these measures at least annually, to determine that they remain relevant. The Board approves all changes made to the Group s Risk Appetite Framework. We define and monitor aggregate risk limits based on financial and non-financial stresses for our earnings volatility, liquidity and capital requirements.

Earnings volatility:

The objectives of the aggregate risk limits seek to ensure that:

The volatility of earnings is consistent with the expectations of stakeholders;

The Group has adequate earnings (and cash flows) to service debt, expected dividends and to withstand unexpected shocks; and

Earnings (and cash flows) are managed properly across geographies and are consistent with funding strategies. The two measures used to monitor the volatility of earnings are IFRS operating profit and EEV operating profit, although IFRS and EEV total profits are also considered.

Liquidity:

The objective is to ensure that the Group is able to generate sufficient cash resources to meet financial obligations as they fall due in business as usual and stressed scenarios. Risk appetite with respect to liquidity risk is measured using a Liquidity Coverage Ratio which considers the sources of liquidity versus liquidity requirements under stress scenarios.

Capital requirements:

The limits aim to ensure that:

The Group meets its internal economic capital requirements;

The Group achieves its desired target rating to meet its business objectives; and Supervisory intervention is avoided.

The two measures used at the Group level are Solvency II capital requirements and internal economic capital requirements. In addition, capital requirements are monitored on local statutory bases.

49

The Group Risk Committee is responsible for reviewing the risks inherent in the Group s business plan and for providing the Board with input on the risk/reward trade-offs implicit therein. This review is supported by the Group Risk function, which uses submissions from our local business units to calculate the Group s aggregated position (allowing for diversification effects between local business units) relative to the aggregate risk limits.

iv. Risk policies

These set out the specific requirements which cover the fundamental principles for risk management within the Group Risk Framework. Policies are designed to give some flexibility so that business users can determine how best to comply with policies based on their local expertise.

There are core risk policies for credit, market, insurance, liquidity and operational risks and a number of internal control policies covering internal model risk, underwriting, dealing controls and tax risk management. They form part of the Group Governance Manual, which was developed to make a key contribution to the sound system of internal control that we maintain in line with the UK Corporate Governance Code and the Hong Kong Code on Corporate Governance Practices. Group Head Office and business units must confirm that they have implemented the necessary controls to evidence compliance with the Group Governance Manual on an annual basis.

v. Risk standards

The Group-wide Operating Standards provide supporting detail to the higher level risk policies. In many cases they define the minimum requirements for compliance with Solvency II regulations which in some areas are highly prescriptive. The standards are more detailed than policies.

b. Our risk culture

Culture is a strategic priority of the Board who recognise the importance of good culture in the way that we do business. Risk culture is a subset of broader organisational culture, which shapes the organisation-wide values that we use to prioritise risk management behaviours and practices.

An evaluation of risk culture is part of the Risk Management Framework and in particular seeks to identify evidence that:

Senior management in business units articulate the need for good risk management as a way to realise long-term value and continuously support this through their actions;

Employees understand and care about their role in managing risk they are aware of and openly discuss risk as part of the way they perform their role; and

Employees invite open discussion on the approach to the management of risk.

Key aspects of risk culture are also communicated through the Code of Conduct and the policies in the Group Governance Manual, including the commitments to the fair treatment of our customers and staff. The approach to the management of risk also is a key part of the evaluation of the remuneration of executives. Risk culture is an evolving topic across the financial services industry and we are working to evaluate and embed a strong risk culture.

c. The risk management cycle

The risk management cycle comprises processes to identify, measure and assess, manage and control, and monitor and report on our risks.

i. Risk identification

Group-wide risk identification takes place throughout the year and includes processes such as our Own Risk and Solvency Assessment (ORSA) and the horizon-scanning performed as part of our emerging risk management process.
