Strategy for the construction of up to 28 drilling rigs in Brazil

Rio de Janeiro, September 11 2009 PETRÓLEO BRASILEIRO S/A PETROBRAS announces that the Company's Executive Board has approved the strategy to hire up to 28 new drilling rigs to be built in Brazil, with increasing national content, and to be used for ultra-deep water exploration, including the fields located in the pre-salt layer. The rigs are slated to be delivered between 2013 and 2018.

A first phase foresees the hiring of a minimum lot of 9 rigs. Of this first lot, seven vessel-type units will be built, based on consolidated technologies widely used in the global market, and constructed in a single shipyard. Contracting these seven rigs from a same shipyard will allow the winning bidder to make the investments that are required in order for it to construct the needed infrastructure and to achieve the necessary economies of scale.

The two other units, which may be either vessel-type rigs or semi-submersible platforms, will be built separately and may use technologies that incorporate concepts new to the market, but which will afford Petrobras greater economic and operating benefits.

In addition to building these nine units, the Company will simultaneously conduct a process among all rig operators in which Petrobras would charter up to four units per operator. The rigs to be chartered would be built in Brazil. Under this strategy, the charterers themselves would be responsible for constructing rigs in Brazilian shipyards.

The process involved the bids to chartering and constructing all of the units is expected to be released as early as September 2009.

The volume of orders will not only make feasible the expansion and upgrading of existing shipyards, as well as the creation of new, modern shipyards in Brazil. It is expected that the investment in new and existing yards will lead to the implementation of a new Brazilian naval industry that can compete with the best international shipyards in the offshore industry segment.

Due to the characteristics of these drilling rigs, building them in Brazil will also promote a major expansion of the related industries in goods and services that supply the shipyards' productive chain.

To assist in this process, Petrobras is analyzing how it may facilitate access to credit for the Brazilian suppliers who will form the supply chain for the drilling rigs to be chartered.

To make it feasible to execute this huge project, which will certainly drive the Brazilian economic development and may generate upwards of 40,000 new direct and indirect jobs after all orders have been placed, the Federal Government will allocate, via the Guarantee Fund for Naval Construction, R\$4 billion exclusively to support the construction of these 28 drilling rigs.

FORWARD-LOOKING STATEMENTS

This press release may contain forward-looking statements. These statements are statements that are not historical facts, and are based on management's current view and estimates of future economic circumstances, industry conditions, company performance and financial results. The words "anticipates", "believes", "estimates", "expects", "plans" and similar expressions, as they relate to the company, are intended to identify forward-looking statements. Statements regarding the declaration or payment of dividends, the implementation of principal operating and financing strategies and capital expenditure plans, the direction of future operations and the factors or trends affecting financial condition, liquidity or results of operations are examples of forward-looking statements. Such statements reflect the current views of management and are subject to a number of risks and uncertainties. There is no guarantee that the expected events, trends or results will actually occur. The statements are based on many assumptions and factors, including general economic and market conditions, industry conditions, and operating factors. Any changes in such assumptions or factors could cause actual results to differ materially from current expectations.
