During the execution of the Franco Mandatory Exploratory Plan, Petrobras acquired 3D seismic data for the entire area, drilled two mandatory wells and six additional ones, with the objective of delimiting and characterizing reservoirs. An extended formation test was also performed.

Búzios field is nearly 200 km off the coast of Rio de Janeiro state at a water depth ranging from 1,600 to 2,100 meters.

Petrobras 2013-2017 Business and Management Plan forecasts the startup of five production systems for Búzios field until 2020, as defined below:
