UNITED STATES

SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10 K

ANNUAL REPORT PURSUANT TO SECTION 13 or 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the fiscal year ended December 31, 2017

OR

TRANSITION REPORT PURSUANT TO Section 13 or 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the transition period from _____ to _____ .
Commission file number: 0000 11688

US ECOLOGY, INC.

(Exact name of registrant as specified in its charter)

Delaware	95 3889638
(State or other jurisdiction of incorporation or organization)	(I.R.S. Employer Identification No.)
101 S. Capitol Blvd., Suite 1000	
Boise, Idaho	83702
(Address of principal executive offices)	(Zip Code)

Registrant's telephone number, including area code: (208) 331 8400

Securities registered pursuant to Section 12(b) of the Act:

Common Stock, \$0.01 par value
(Title of class)

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Edgar Filing: US ECOLOGY, INC. - Form 10-K

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company Emerging
(Do not check if a smaller reporting growth company
company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the registrant's voting stock held by non-affiliates on June 30, 2017 was approximately \$1.09 billion based on the closing price of \$50.50 per share as reported on the NASDAQ Global Market System.

At February 16, 2018, there were 21,875,407 shares of the registrant's Common Stock outstanding.

Documents Incorporated by Reference

Listed hereunder are the documents, any portions of which are incorporated by reference and the Parts of this Form 10-K into which such portions are incorporated:

1. The registrant's definitive proxy statement for use in connection with the Annual Meeting of Stockholders to be held on or about May 22, 2018 to be filed within 120 days after the registrant's fiscal year ended December 31, 2017, portions of which are incorporated by reference into Part III of this Form 10-K.

PART I

Cautionary Statement for Purposes of Safe Harbor Provisions of the Private Securities Litigation Reform Act of 1995

This annual report on Form 10-K contains forward looking statements within the meaning of the federal securities laws. Statements that are not historical facts, including statements about the Company's beliefs and expectations, are forward looking statements. Forward looking statements include statements preceded by, followed by or that include the words "may," "could," "would," "should," "believe," "expect," "anticipate," "plan," "estimate," "target," "project," "intend" or similar expressions. These statements include, among others, statements regarding our financial and operating results, strategic objectives and means to achieve those objectives, the amount and timing of capital expenditures, repurchases of its stock under approved stock repurchase plans, the amount and timing of interest expense, the likelihood of our success in expanding our business, financing plans, budgets, working capital needs and sources of liquidity.

Forward looking statements are only predictions and are not guarantees of performance. These statements are based on management's beliefs and assumptions, which in turn are based on currently available information. Important assumptions include, among others, those regarding demand for Company services, expansion of service offerings geographically or through new or expanded service lines, the timing and cost of planned capital expenditures, competitive conditions and general economic conditions. These assumptions could prove inaccurate. Forward looking statements also involve known and unknown risks and uncertainties, which could cause actual results to differ materially from those contained in any forward looking statement. Many of these factors are beyond our ability to control or predict. Such factors include the replacement of non-recurring event cleanup projects, a loss of a major customer, our ability to permit and contract for timely construction of new or expanded disposal cells, our ability to renew our operating permits or lease agreements with regulatory bodies, loss of key personnel, compliance with and changes to applicable laws, rules, or regulations, access to insurance, surety bonds and other financial assurances, a deterioration in our labor relations or labor disputes, our ability to perform under required contracts, failure to realize anticipated benefits and operational performance from acquired operations, adverse economic or market conditions, government funding or competitive pressures, incidents or adverse weather conditions that could limit or suspend specific operations, access to cost effective transportation services, fluctuations in foreign currency markets, lawsuits, our willingness or ability to repurchase stock or pay dividends, implementation of new technologies, limitations on our available cash flow as a result of our indebtedness and our ability to effectively execute our acquisition strategy and integrate future acquisitions.

Except as required by applicable law, including the securities laws of the United States and the rules and regulations of the Securities and Exchange Commission (the "SEC"), we are under no obligation to publicly update or revise any forward looking statements, whether as a result of new information, future events or otherwise. You should not place undue reliance on our forward looking statements. Although we believe that the expectations reflected in forward looking statements are reasonable, we cannot guarantee future results or performance. Before you invest in our common stock, you should be aware that the occurrence of the events described in the "Risk Factors" section in this report could harm our business, prospects, operating results, and financial condition.

Investors should also be aware that while we do, from time to time, communicate with securities analysts, it is against our policy to disclose to them any material non-public information or other confidential commercial information. Accordingly, stockholders should not assume that we agree with any statement or report issued by any analyst irrespective of the content of the statement or report. Furthermore, we have a policy against issuing or confirming financial forecasts or projections issued by others. Thus, to the extent that reports issued by securities analysts contain any projections, forecasts or opinions, such reports are not the responsibility of US Ecology, Inc.

Table of Contents

ITEM 1. BUSINESS

General

The table below contains definitions that are used throughout this Annual Report on Form 10 K.

Term	Meaning
US Ecology, the Company, “we,” “our,” “us”	US Ecology, Inc., and its subsidiaries
AEA	Atomic Energy Act of 1954, as amended
CEPA	Canadian Environmental Protection Act (1999)
CERCLA or “Superfund”	Comprehensive Environmental Response, Compensation and Liability Act of 1980
CWA	Clean Water Act of 1977
LARM	Low activity radioactive material exempt from federal Atomic Energy Act regulation for disposal
LLRW	Low level radioactive waste regulated under the federal Atomic Energy Act for disposal
NORM/NARM	Naturally occurring and accelerator produced radioactive material
NRC	U.S. Nuclear Regulatory Commission
PCBs	Polychlorinated biphenyls
QEQA	Québec Environmental Quality Act
RCRA	Resource Conservation and Recovery Act of 1976
SEC	U. S. Securities and Exchange Commission
TSCA	Toxic Substances Control Act of 1976
TSDF	Treatment, Storage and Disposal Facility
USACE	U.S. Army Corps of Engineers
USEPA	U.S. Environmental Protection Agency
WUTC	Washington Utilities and Transportation Commission

US Ecology, Inc. is a leading North American provider of environmental services to commercial and government entities. The Company addresses the complex waste management needs of its customers, offering treatment, disposal and recycling of hazardous, non hazardous and radioactive waste, as well as a wide range of complementary field and industrial services. US Ecology’s comprehensive knowledge of the waste business, its collection of waste management facilities and focus on safety, environmental compliance, and customer service enables us to effectively meet the needs of our customers and to build long lasting relationships. US Ecology and its predecessor companies have been in business for more than 60 years. As of December 31, 2017, we employed approximately 1,550 people.

US Ecology was most recently incorporated as a Delaware corporation in May 1987 as American Ecology Corporation. On February 22, 2010, the Company changed its name from American Ecology Corporation to US Ecology, Inc. Our filings with the SEC are posted on our website at www.usecology.com. The information found on our website is not part of this or any other report we file with or furnish to the SEC. The public can also obtain copies of these filings by visiting the SEC’s Public Reference Room at 100 F Street NE, Washington DC 20549, or by calling the SEC at 1 800 SEC 0330 or by accessing the SEC’s website at www.sec.gov.

We have fixed facilities and service centers operating in the United States, Canada and Mexico. Our fixed facilities include five permitted hazardous waste landfills and one LLRW landfill located near Beatty, Nevada; Richland,

Washington; Robstown, Texas; Grand View, Idaho; Detroit, Michigan and Blainville, Québec, Canada. These facilities generate revenue from fees charged to treat and dispose of waste and to perform various field and industrial services for our customers.

On June 17, 2014, the Company acquired 100% of the outstanding shares of EQ Holdings, Inc. and its wholly owned subsidiaries (collectively "EQ"). EQ is a fully integrated environmental services company providing waste treatment and disposal, wastewater treatment, remediation, recycling, industrial cleaning and maintenance, transportation, total waste

Table of Contents

management, technical services, and emergency response services to a variety of industries and customers in North America.

On November 1, 2015, we sold our Allstate Power Vac, Inc. (“Allstate”) subsidiary to a private investor group. See Note 5 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K for additional information.

Our operations are managed in two reportable segments reflecting our internal management reporting structure and nature of services offered as follows:

Environmental Services—This segment provides a broad range of hazardous material management services including transportation, recycling, treatment and disposal of hazardous and non hazardous waste at Company owned landfill, wastewater and other treatment facilities.

Field & Industrial Services—This segment provides packaging and collection of hazardous waste and total waste management solutions at customer sites and through our 10 day transfer facilities. Services include on site management, waste characterization, transportation and disposal of non hazardous and hazardous waste. This segment also provides specialty services such as high pressure cleaning, tank cleaning, decontamination, remediation, transportation, spill cleanup and emergency response and other services to commercial and industrial facilities and to government entities.

Financial information with respect to each segment is further discussed in Note 20 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K.

Environmental Services Segment

Our Environmental Services involve the transportation, treatment, recycling and disposal of hazardous and non hazardous wastes, and include physical treatment, recycling, landfill disposal and wastewater treatment services.

Waste Treatment & Disposal

We recycle, treat and dispose of hazardous and non hazardous industrial wastes. The wastes handled include substances which are classified as “hazardous” because of their corrosive, ignitable, reactive or toxic properties, and other wastes subject to federal, state and provincial environmental regulation. The wastes we handle come in solid, liquid and sludge form and can be received in a variety of containerized and bulk forms and transported to our facilities by truck and rail.

We own and operate five permitted hazardous waste treatment and disposal landfills in the United States and Canada used primarily for the disposal of wastes treated at Company owned onsite and offsite treatment facilities. The United States landfills are regulated under RCRA by the respective states in which they are located and the USEPA while our Canadian landfill is regulated by the Québec Ministry of Environment. We also operate a commercial LLRW landfill in Richland, Washington that is licensed by the Washington Department of Health through delegated authority of the NRC. The WUTC sets disposal rates for LLRW. Rates are set at an amount sufficient to cover operating costs and provide us with a reasonable profit. The current rate agreement with the WUTC was extended in 2013 and is effective until January 1, 2020.

As of December 31, 2017, the capacity used in the calculation of the useful economic lives of our six landfills includes approximately 37.2 million cubic yards of remaining permitted airspace capacity and approximately 18.1 million cubic yards of additional unpermitted airspace capacity included in the footprints of these landfills. We

believe it is probable that this unpermitted airspace capacity will be permitted in the future based on our analysis of site conditions, past regulatory approvals on adjacent property, and our interactions with regulators on applicable regulations, although there can be no assurance that any additional unpermitted airspace capacity will be permitted in the future.

Treatment and disposal (“T&D”) revenue can be broken down into two categories, based on the underlying nature of the revenue source: “Base Business” and “Event Business.”

Table of Contents

Base Business consists of waste streams from ongoing industrial activities and tends to be reoccurring in nature. Our strategy is to expand our Base Business while securing both short-term and extended-duration Event Business. We define Event Business as non-recurring projects that are expected to equal or exceed 1,000 tons, with Base Business defined as all other business not meeting the definition of Event Business. The duration of Event Business projects can last from a several-week cleanup of a contaminated site to a multiple-year cleanup project.

Base Business represented approximately 78% and 82% of disposal revenue (excluding transportation) for the years ended December 31, 2017 and 2016, respectively. Event Business contributed approximately 22% and 18% of disposal revenue (excluding transportation) for the years ended December 31, 2017 and 2016, respectively.

When Base Business covers our fixed overhead costs, a significant portion of disposal revenue generated from Event Business is generally realized as operating income and net income. This strategy takes advantage of the operating leverage inherent to the largely fixed-cost nature of the waste disposal business. Contribution margin is influenced by whether the waste is directly disposed (“direct disposal”) or requires the application of chemical reagents, absorbents or other additives (variable costs) to treat the waste prior to disposal.

A significant portion of our T&D revenue is attributable to discrete Event Business projects which vary widely in size, duration and unit pricing. For the year ended December 31, 2017, approximately 22% of our T&D revenue was derived from Event Business projects. The one-time nature of Event Business, diverse spectrum of waste types received and widely varying unit pricing necessarily creates variability in revenue and earnings. This variability may be influenced by general and industry-specific economic conditions, funding availability, changes in laws and regulations, government enforcement actions or court orders, public controversy, litigation, weather, commercial real estate, closed military bases and other project timing, government appropriation and funding cycles and other factors. The types and amounts of Base Business waste received also vary quarter to quarter, sometimes significantly, but are generally more predictable than Event Business.

The types of waste received, also referred to as “service mix,” can produce significant quarter-to-quarter and year-to-year variations in revenue, average selling price, gross profit, gross margin, operating profit and net income for both Base Business and Event Business.

Wastewater Treatment

We operate wastewater treatment facilities that offer a range of wastewater treatment technologies. These wastewater treatment operations involve processing hazardous and non-hazardous wastes through the use of physical and chemical treatment methods. Our wastewater treatment facilities treat a broad range of industrial liquid and semi-liquid wastes containing heavy metals, organics and suspended solids.

Table of Contents

The following table summarizes the locations and services of our active Environmental Services waste treatment and/or disposal facilities:

Location	Onsite Landfill	Services
Beatty, Nevada	Yes	Hazardous and non hazardous industrial waste treatment, storage and disposal facility permitted under Subtitle C of RCRA and TSCA to treat and dispose RCRA, TSCA and certain NRC exempt (NORM) radioactive waste.
Robstown, Texas	Yes	Hazardous and non hazardous industrial waste treatment, storage and disposal facility permitted under Subtitle C of RCRA to treat and dispose RCRA, PCB remediation and certain NRC exempt (LARM and NORM/NARM) radioactive waste. PCB waste storage for off site shipment. Features a thermal desorption system permitted as a Subpart X RCRA treatment unit that treats and recycles organic materials including recoverable oils and metal catalysts from petroleum wastes. Rail transfer station.
Grand View, Idaho	Yes	Hazardous and non hazardous industrial waste treatment, storage and disposal facility permitted under Subtitle C of RCRA and TSCA to treat RCRA and TSCA wastes and certain NRC exempt (NORM/NARM, Technologically Enhanced NORM (TENORM)) radioactive waste. Rail transfer station.
Belleville, Michigan	Yes	Hazardous and non hazardous industrial waste treatment, storage and disposal facility permitted under Subtitle C of RCRA to treat and dispose RCRA wastes and certain NRC exempt (NORM/NARM, Technologically Enhanced NORM (TENORM)) radioactive waste. Permitted under TSCA to dispose TSCA wastes. Features a regenerative thermal oxidation air pollution control system that is compliant with RCRA Subpart CC air emissions standards. Rail transfer station.
Blainville, Québec, Canada	Yes	Permitted by the Canadian Ministry of Environment and authorized under the Environmental Quality Act by Order in Council to treat and stabilize inorganic hazardous liquid and solid waste and contaminated soils to produce a non leachable concrete like material for disposal in the onsite landfill. Specializes in processing hard to treat materials, such as cyanides, mercury compounds, strong acids, non organic oxidizers, lab packs, contaminated debris and batteries. Direct rail access.
Richland, Washington	Yes	LLRW disposal facility accepts Class A, B, and C commercial LLRW from within the Northwest Interstate and Rocky Mountain Compacts, NORM/NARM and LARM waste including radium sources produced by customers nationwide. One of only three full service Class A, B, and C disposal facilities in the nation.
Detroit, Michigan	No	RCRA Part B and Centralized Wastewater Treatment (“CWT”) permitted industrial hazardous and non hazardous treatment of liquid wastes, stabilization, solidification, chemical oxidation/reduction and deactivation of hazardous and non hazardous solid and liquid wastes. Direct rail access.
Canton, Ohio	No	RCRA Part B and CWT permitted wastewater treatment of hazardous and non hazardous liquid wastes and stabilization, solidification, chemical oxidation/reduction, deactivation and metals recovery of hazardous and non hazardous liquid and solid wastes. Specializes in a delisting process that converts industrial inorganic wastes into non hazardous residuals.
Harvey, Illinois	No	RCRA Part B and CWT permitted wastewater treatment of hazardous and non hazardous liquid wastes and stabilization, solidification, chemical oxidation/reduction, deactivation, metals recovery of hazardous and

		non hazardous liquid and solid wastes and industrial cleaning. Specializes in a delisting process that converts industrial inorganic wastes into non hazardous residuals.
York, Pennsylvania	No	RCRA Part B and CWT permitted wastewater treatment of hazardous and non hazardous liquid wastes and stabilization, solidification, chemical oxidation/reduction, deactivation and metals recovery of hazardous and non hazardous liquid and solid wastes. Specializes in a delisting process that converts industrial inorganic wastes into non hazardous residuals.
Tulsa, Oklahoma	No	RCRA Part B and CWT permitted wastewater treatment of hazardous and non hazardous liquid wastes and stabilization, solidification, chemical oxidation/reduction and deactivation of hazardous and non hazardous liquid and solid wastes.
Tilbury, Ontario, Canada	No	Hazardous and non hazardous industrial waste treatment, storage, and disposal facility permitted by the Ontario Ministry of Environment. Provides bulking, blending and solidification services. Treatment of non hazardous hydrocarbon contaminated solids to industrial re use standards. Full licensed and permitted fleet of hazardous and non hazardous transportation equipment. Also provides heavy industrial cleaning and confined space entry and rescue services along with emergency response.
Vernon, California	No	RCRA Part B and CWT permitted wastewater treatment of hazardous and non hazardous liquid wastes. Storage and consolidation of hazardous and non hazardous wastes. California State certified laboratory. Direct rail access.

Recycling Services

We operate recycling technologies designed to reclaim valuable commodities from hazardous waste, including oil bearing hazardous waste, certain metal bearing waste, batteries, and solvent based wastes for industrial clients, metal finishing and other manufacturing processes. The recycling and reclamation process involves the treatment of wastes using various

Table of Contents

methods to effectively remove contaminants from the original material to restore its usefulness and to reduce the volume of waste requiring disposal.

We offer full service storm water management and propylene glycol recovery at major airports. We currently operate deicing fluid collection systems at the Minneapolis St. Paul, Minnesota and Detroit, Michigan airports. We also receive deicing fluids from the Grand Rapids, Michigan airport in the Great Lakes Region. Recovered fluids are transported to our RCRA Part B and CWT permitted chemical recycling facility where they are recycled into a greater than 99% pure material that is sold to industrial users.

We also operate a thermal desorption unit at our Robstown, Texas facility that recovers oil and metal bearing catalyst from refinery waste. The recycled oil and recycled catalyst are sold to third parties.

We operate a fleet of mobile solvent recycling stills that provide on site recycling services throughout the Eastern United States. The trailer mounted stills are self contained units that perform solvent distillation at the point of generation. Waste solvents are processed in 500 - 7,500 gallon batches, and clean solvent is returned for reuse. Our Mobile Recycling services are based in Mt. Airy, North Carolina.

Transportation

For waste transported by rail from locations distant from our facilities, transportation related revenue can vary significantly and can account for as much as 75% of total project revenue. While bundling transportation and disposal services may reduce overall gross profit as a percentage of total revenue (“gross margin”), this value added service has allowed us to win multiple projects that we believe we could not have otherwise competed for successfully. Our Company owned fleet of gondola railcars, which is periodically supplemented with railcars obtained under operating leases, has reduced our transportation expenses by largely eliminating reliance on more costly short term rentals. These Company owned railcars also help us to win business during times of demand driven railcar scarcity. We also utilize a variety of specially designed and constructed Company owned tanker trucks and trailers as well as various third party transporters to support this activity. Further, to maximize utilization of our railcar fleet, we periodically deploy available railcars to transport waste from cleanup sites to disposal facilities operated by other companies. Such transportation services may also be bundled with logistics and field services support work.

Field & Industrial Services Segment

Our Field & Industrial Services include a wide range of industrial maintenance and specialty services at refineries, chemical plants, steel and automotive plants, and other government, commercial and industrial facilities. Onsite specialty services include excavation, high pressure cleaning, tank cleaning, decontamination, remediation, transportation, spill cleanup and emergency response. We provide these services through a network of facilities located throughout the United States that are organized into service lines including Small Quantity Generation, Remediation Services, Managed Services, Emergency Response, Transfer and Processing and Terminal Services and Industrial Services.

Small Quantity Generation

Our small quantity generation service offerings consist of retail services, laboratory packing, less than truckload (“LTL”), and household hazardous waste (“HHW”) collection. Retail services, laboratory packing, LTL and HHW are full service waste characterization, packaging, collection and transportation programs. Services are provided to small, medium and large industrial and commercial customers. These programs are built on our network of service centers, employ highly trained staff and provide a high level of service to the customer. As an integral part of our services, we operate a network of service centers that characterize, package and collect hazardous and non hazardous wastes from

customers and transport such wastes to and between our facilities for treatment or bulking for shipment to final disposal locations. Customers typically accumulate wastes in containers, such as 55 gallon drums, bulk storage tanks or 20 cubic yard roll off containers. We utilize a variety of specially designed and constructed tank trucks and semi trailers as well as third party transporters, including railroads. Depending on customer needs and competitive economics, transportation services may be offered at or near our cost to help secure new business.

Table of Contents

Remediation Services

Our remediation service offerings include RCRA and TSCA closures, surgical excavations, wastewater management, building decontamination and radiological site remediation.

Managed Services

Our managed service offerings consist of total waste management (“TWM”) programs. Through our TWM program, customers outsource the management of their waste compliance program to us, allowing us to organize and coordinate their waste management disposal activities and environmental compliance.

Emergency Response

Our primary emergency response offerings include spill response, waste analysis and treatment and disposal planning. We also offer product transfers, spill contingency planning and yearly service agreements with first responder status. Trained, experienced professionals operate the Company’s Emergency Response Service 24 hours per day, 7 days per week.

Transfer and Processing

Our transfer and processing stations stage and consolidate non bulk loads of hazardous, non hazardous and universal waste into full loads for more efficient shipment to Company owned or third party treatment and disposal facilities. This allows us to offer a broader geographic presence without having a dedicated, Company owned treatment or disposal facility in the region.

Terminal Services

Our terminal services include petroleum and chemical tank cleaning and other services, including emergency response, construction and industrial maintenance. The Company services several major petroleum terminals around New York Harbor.

Industrial Services

Our primary industrial service offerings include industrial cleaning and maintenance for refineries, chemical plants, steel and automotive plants, as well as tank cleaning and temporary storage.

Waste Services Industry

During the 1970s and 1980s, waste services industry growth in the United States was driven by new environmental laws and actions by federal and state agencies to regulate existing hazardous waste management facilities and direct the cleanup of contaminated sites under the federal Superfund law. By the early 1990s, excess hazardous waste management capacity had been constructed by the industry. Over this same period, to better manage risk and reduce expenses, many waste generators instituted industrial process changes and other methods to reduce waste production. These factors led to highly competitive market conditions that still apply today.

In the U.S., hazardous waste is regulated under the RCRA, which created a cradle to grave system governing defined hazardous waste from the point of generation to ultimate disposal. RCRA requires waste generators to distinguish between “hazardous” and “non hazardous” wastes, and to treat, store and dispose of hazardous waste in accordance with specific regulations. Generally, entities that treat, store, or dispose of hazardous waste must obtain a permit, either

from the USEPA or from a state agency to which the USEPA has delegated such authority. Similar regulations and management methods apply to hazardous waste generation in Canada, which is regulated by the Canada Ministry of Environment and delegated to provincial agencies.

Disposal facilities are typically designed to permanently contain the waste and prevent the release of harmful pollutants into the environment. The most common hazardous waste disposal practice is placement in an engineered disposal unit

Table of Contents

such as a landfill, surface impoundment or deep injection well. RCRA's hazardous waste permitting program establishes specific requirements that must be followed when managing those wastes.

We believe that a baseline demand for hazardous waste services will continue into the future with fluctuations driven by general and industry specific economic conditions, identification and prioritization of new cleanup needs, cleanup project schedules, funding availability, regulatory changes and other public policy decisions. We further believe that the ability to deliver specialized niche services while aggressively competing for large volume cleanup projects and non niche commodity business opportunities differentiates successful from less successful companies. We seek to control variable costs, expand service lines, increase waste throughput efficiency, employ innovative treatment techniques, provide complementary transportation and logistics services, build market share and increase profitability.

Our Richland, Washington disposal facility, serving the Northwest and Rocky Mountain LLRW Compacts, is one of three operating Compact disposal facilities in the U.S. While our Washington disposal facility has substantial unused capacity, it can only accept LLRW from the 11 western states comprising the two Compacts served. The Barnwell, South Carolina site, operated by Energy Solutions, Inc. ("Energy Solutions"), exclusively serves the three state Atlantic Compact. A third LLRW disposal facility, licensed by Waste Control Specialists, LLC and located near Andrews, Texas serves the two state Texas Compact and approved out of compact waste generators. Class A LLRW from states outside the Northwest Compact region may also be disposed at a non compact, commercial disposal site in Clive, Utah, also operated by Energy Solutions.

Increases in pricing at AEA licensed LLRW disposal facilities heightened demand for more cost effective disposal options for soil, debris, consumer products, industrial wastes and other materials containing LARM, including "mixed wastes," exhibiting both hazardous and radioactive properties. In addition to commercial demand, a substantial amount of LARM is generated by government cleanup projects. The NRC, USEPA and USACE have authorized the use of hazardous waste disposal facilities to dispose of certain LARM, encouraging expansion of this compliant, cost effective alternative. We have been successful at expanding our permits at four of our RCRA hazardous waste facilities to allow acceptance of additional LARM wastes.

Industrial Services Industry

The industrial services industry is highly fragmented with thousands of small companies performing a variety of cleaning, maintenance and other services to industrial based companies such as refineries, chemical plants and steel and automotive plants. We believe customers increasingly desire to shift high fixed costs to lower variable costs by outsourcing waste management and industrial services. Some companies, such as power generation plants, petroleum refineries and chemical processors, are required to perform specialized "turnaround" maintenance only once or twice per year, making it impractical and cost prohibitive to purchase expensive, specialized equipment, comply with complex permits and employ full time specialized technicians required to perform those services. Similarly, the regulatory requirements of characterizing, manifesting, transporting and properly disposing of waste has led many companies to outsource this function to specialists. Our network of service centers and treatment, recycling and storage facilities provides a national footprint allowing us to serve these customers, while at the same time internalizing the waste to our own facilities.

Industrial services generally have low barriers to entry and customers are frequently won based on quality of service, reputation, health and safety record, logistics and price. This low barrier to entry has fostered a fragmented and competitive market place.

Strategy

Our strategy is to capitalize on our difficult to replicate combination of treatment and disposal assets and complementary service lines to provide a full service offering to customers and increase market share in the diverse markets we serve. We are focused on safety, environmental compliance and a commitment to customer service excellence. In addition to organic growth initiatives, we actively pursue acquisition opportunities to expand our geographic reach, service lines and customer base. The principal elements of our business strategy are to:

10

Table of Contents

Execute Best in Class Safety and Environmental Compliance Programs. We pursue best in class safety and environmental compliance at US Ecology. Not only is it the cornerstone of our business, but our customers and regulators rely on our expertise when they select us as a vendor or grant us permits and licenses. We deploy significant resources in terms of human capital, programs and facility investment to achieve safe and compliant operations. The Company has dedicated professionals who oversee and manage safety and environmental programs including, but not limited to, employee training, internal and independent external audits, safety incentive programs, Voluntary Protection Programs (“VPP”), the Safety & Health Achievement Recognition Program, and ISO 9001 and ISO 14001 programs. Dedicated senior managers regularly review and discuss environmental and safety results with operational staff, management and the Board of Directors to improve our safety results and focus on regulatory compliance.

Leverage Regulatory Expertise to Expand Permit Capabilities and Broaden Cost Effective Service Offerings. We have a proven track record of leveraging more than six decades of regulatory experience to broaden our service offerings. Working with customers, we assess market opportunities in relation to existing laws, regulations and permit conditions. Our engineering, operational and regulatory affairs personnel then seek authority to implement innovative processes and technologies and accept additional types of waste by modifying our existing permits or obtaining new permits.

Continue to Build on Our Robust Waste Handling Infrastructure to Increase Revenue from Existing Assets. We believe we have a difficult to replicate set of treatment, recycling and disposal assets in the highly regulated hazardous and radioactive waste industry. We aim to enhance treatment capabilities at our existing facilities to handle additional waste streams and increase throughput. We also continue to invest in equipment and infrastructure to ensure that we have ample throughput capacity to expand our Event Business while continuing to support our Base Business customers.

Execute on Marketing Initiatives to Grow Organically. Our sales team is focused on high margin, niche wastes that our competitors may not be able to obtain the necessary regulatory authorizations for or handle cost effectively. We seek to expand into new markets and offer new services allowing us to cross sell or bundle services and ultimately drive incremental volume into our existing disposal facilities. Our strategy is to have our Base Business cover our fixed overhead costs and deliver a reasonable profit, which allows the majority of our Event Business revenue to be realized as operating profit. We aim to continue building our Base Business while remaining flexible enough to handle large cleanup events.

Deliver Innovative Technological Solutions. We challenge ourselves to identify innovative and technology driven solutions to solve our customers’ waste management challenges. Past examples include leveraging our expertise in developing waste treatment recipes for organic and metals bearing wastes, utilizing waste as a reagent to treat other wastes, beneficial reuse of select wastes, partnering with an innovative technology provider to deploy thermal desorption technology to recover oil and metal catalyst from refinery waste, and stabilizing mercury laden waste and other wastes using patented treatment process.

Pursue a Disciplined Acquisition Strategy to Add Complementary Capabilities. We pursue selective acquisitions to expand our disposal network, customer base and geographic footprint. We have had success achieving this in recent years through our targeted acquisition strategy, acquiring Stablex Canada Inc. (“Stablex”) in 2010, Dynecol, Inc. in 2012, EQ in 2014 and Environmental Services Inc. (“ESI”) and the Vernon, California based RCRA Part B, liquids and solids waste treatment and storage facility of Evoqua Water Technologies LLC in 2016. The acquisition of EQ also provided us with an entirely new line of complementary field and industrial service offerings. We continue to seek acquisition opportunities to further expand our service offerings across the hazardous waste value chain while maintaining our commitment to compliance, safety and customer service excellence.

Competitive Strengths

Difficult to Replicate Infrastructure. We consider our disposal facilities to be difficult to replicate due to the longstanding regulatory and public policy environment for hazardous waste processing facilities, which includes the generally high cost of obtaining permits, multi-year permitting timeframes, uncertainty of outcome, high initial capital expenditures and the potential for both broad-based and local community opposition to the development of new facilities. As a result, it has been more than 20 years since a new hazardous waste landfill has been built in the United States. We operate five of twenty landfills in the U.S. and Canada that are permitted to accept RCRA wastes. Our Richland, Washington LLRW facility is

Table of Contents

one of only three full service Class A, B, and C disposal facilities in the U.S. Our personnel have extensive experience safely managing certain radioactive waste requiring the use of shielding and remote handling devices.

Significant Regulatory and Operating Expertise. We operate in a highly regulated marketplace. The permitting process for operating disposal assets in our industry is lengthy and complex, requiring a deep understanding of federal and state hazardous and radioactive waste laws and regulations. We maintain a regulatory compliance and permitting program at our disposal facilities that has allowed us to obtain approvals to expand our service offering in terms of the types, amounts and concentrations of wastes that we are authorized to accept. Our track record of successfully navigating government regulatory and permitting processes has been a consistent competitive advantage.

A Market Leader in Hazardous & Non Hazardous Waste Treatment and Disposal. We are a leader in the North American hazardous waste services sector with more than six decades of experience. Our collection of disposal assets combined with our transportation network provides us with coast to coast treatment and disposal capabilities, allowing us to serve a diverse mix of customers and industries across the United States, Canada and Mexico.

Comprehensive Waste Services. Our comprehensive waste service offerings allow us to act as a full service provider to our customers. Our full service orientation creates incremental revenue growth as customers seek to minimize the number of outside vendors through “one stop” service providers.

Diverse Markets and Customer Base. In 2017, we serviced more than 5,000 commercial and governmental entities, such as refineries, chemical production facilities, heavy manufacturers, steel mills, waste brokers and medical and academic institutions. Our broad range of end markets gives us exposure to a variety of industrial cycles, lessening the impact of market volatility.

Solid Safety and Compliance Record. Safety and environmental compliance is a cornerstone of US Ecology’s business. The Company has dedicated environmental professionals who oversee and manage safety and environmental programs including, but not limited to, employee training, internal and independent external audits, safety incentive programs, VPP, the Safety & Health Achievement Recognition Program, and ISO 9001 and ISO 14001 programs. Dedicated senior managers regularly review and discuss environmental and safety results with operational staff, management and the Board of Directors to improve our safety results and focus on regulatory compliance. In addition, we have received multiple operating site safety awards including the VPP Star Worksite Award, Thoroughbred Safety Award and the CSX Chemical Safety Award.

Competition

Our Environmental Services segment competes with large and small companies in each of the commercial markets we serve. While niche services apply, the radioactive, hazardous and non hazardous industrial waste management industry is generally very competitive. We believe that our primary hazardous waste and PCB disposal competitors are Clean Harbors, Inc., Heritage Environmental Services and Waste Management, Inc. Other hazardous waste disposal competitors include, but are not limited to, Peoria Disposal Company, EnviroSAFE Services of Ohio, Tradebe, Ross Environmental, Perma Fix Environmental Services and Veolia Environmental Services. We believe that our primary radioactive material disposal competitors are Energy Solutions, Inc. and Waste Control Specialists, Inc. We believe the principal competitive factors applicable to these businesses are:

- price;
- specialized permits and “niche” service offerings;
- customer service;
- operational efficiency and technical expertise;
- regulatory compliance and worker safety;

Table of Contents

- industry reputation and brand name recognition;
- transportation distance; and
- State or Province and local community support.

Competition within our Field & Industrial Services segment varies by locality and type of service rendered, with competition coming from large national and regional service providers and hundreds of privately owned firms that offer field or industrial services. We believe that our primary field and industrial services competitors are Clean Harbors, Inc., Stericycle, Inc., Veolia Environmental Services and Waste Management, Inc. Each of these competitors is able to provide most if not all of the field and industrial services we offer.

We believe that we are competitive in all markets we serve and that we offer a unique mix of services, including niche technologies and services that favorably distinguish us from competitors. We also believe that our strong brand name recognition from six decades of experience, compliance and safety record, customer service reputation and positive relations with regulators and local communities enhance our competitive position. Advantages exist for competitors that are larger in scale or have technology, permits or equipment to handle a broader range of waste, that operate in jurisdictions imposing lower disposal fees and/or are located closer to where wastes are generated.

Permits, Licenses and Regulatory Requirements

Obtaining authorization to construct and operate new hazardous or radioactive waste facilities is a lengthy and complex process. We believe we have demonstrated significant expertise in this area over multiple decades. We also believe we possess all permits, licenses and regulatory approvals required to maintain regulatory compliance and operate our facilities and have the specialized expertise required to obtain additional approvals to continue growing our business in the future.

We incur costs and make capital investments to comply with environmental regulations. These regulations require that we operate our facilities in accordance with permit specific requirements. Most of our facilities are also required to provide financial assurance for closure and post closure obligations should our facilities cease operations. Both human resource and capital investments are required to maintain compliance with these requirements.

United States Hazardous Waste Regulation

Our hazardous, industrial, non hazardous and radioactive waste treatment, disposal and handling business is subject to extensive federal and state environmental, health, safety, and transportation laws, regulations, permits and licenses. Local government controls may also apply. The responsible government regulatory agencies regularly inspect our operations to monitor compliance. They have authority to enforce compliance through the suspension or revocation of operating licenses and permits and the imposition of civil or criminal penalties in case of violations. We believe that these laws and regulations, as well as the specialized services we provide, contribute to demand and create barriers to new competitors seeking to enter the markets we serve.

RCRA provides a comprehensive framework for regulating hazardous waste transportation, treatment, storage and disposal. RCRA regulation is the responsibility of the USEPA, which may delegate authority to state agencies. Chemical compounds and residues derived from USEPA listed industrial processes are subject to RCRA standards unless they are delisted through rulemaking. RCRA liability may be imposed for improper waste management or failure to take corrective action for releases of hazardous substances. To the extent wastes are recycled or beneficially reused, regulatory controls and permitting requirements under RCRA diminish. LARM and NORM/NARM may also be managed to varying degrees under RCRA permits, as is authorized for our facilities in Grand View, Idaho; Beatty, Nevada; Belleville, Michigan and Robstown, Texas.

CWA legislation prohibits discharge of pollutants into the waters of the United States without governmental authorization and regulates the discharge of pollutants into surface waters and sewers from a variety of sources, including disposal sites and treatment facilities. The USEPA has promulgated “pretreatment” regulations under the CWA, which establish pretreatment standards for introduction of pollutants into publicly owned treatment works. In the course of the treatment

Table of Contents

process, our wastewater treatment facilities generate wastewater, which we discharge to publicly owned treatment works pursuant to permits issued by the appropriate governmental authority. We are required to obtain discharge permits and conduct sampling and monitoring programs.

CERCLA and its amendments impose strict, joint and several liability on owners or operators of facilities where a release of hazardous substances has occurred, on parties who generated hazardous substances released at such facilities and on parties who arranged for the transportation of hazardous substances. Liability under CERCLA may be imposed if releases of hazardous substances occur at treatment, storage or disposal sites. Since waste generators, transporters and those who arrange transportation are subject to the same liabilities, we believe they are motivated to minimize the number of disposal sites used. In addition, hazardous waste generated during the remediation of CERCLA cleanup projects and transferred offsite must be managed by a treatment and disposal facility authorized by EPA to manage CERCLA waste.

TSCA regulates the treatment, storage and disposal of PCBs. U.S. regulation and licensing of PCB wastes is the responsibility of the USEPA. Our Grand View, Idaho and Beatty, Nevada facilities have TSCA treatment, storage and disposal permits. Our Belleville, Michigan facility has a TSCA disposal permit. Our Robstown, Texas facility has a TSCA storage permit and may dispose of PCB contaminated waste in limited concentrations not requiring a TSCA disposal permit.

The AEA assigns the NRC regulatory authority over receipt, possession, use and transfer of certain radioactive materials, including disposal. The NRC has adopted regulations for licensing commercial LLRW disposal and has delegated regulatory authority to certain states including Washington, where our Richland facility is located. The NRC and U.S. Department of Transportation regulate the transport of radioactive materials. Shippers must comply with both the general requirements for hazardous materials transportation and specific requirements for transporting radioactive materials.

The Energy Policy Act of 2005 amended the AEA to classify discrete (i.e. concentrated versus diffuse) NORM/NARM as byproduct material. The law does not apply to interstate Compacts ratified by Congress pursuant to the LLRW Policy Act.

Canadian Hazardous Waste Regulation

The Canadian federal government regulates issues of national scope where activities cross provincial boundaries and affect Canada's relations with other nations. The Provinces retain control over environmental matters within their boundaries including primary responsibility for regulation and management of hazardous waste.

The main federal laws governing hazardous waste management are CEPA and the Transportation of Dangerous Goods Act. Environment and Climate Change Canada is the federal agency with responsibility for environmental matters. CEPA charges Environment Canada and Health Canada with the protection of human health and the environment and seeks to control the production, importation and use of substances in Canada and their impact on the environment. The Export and Import of Hazardous Waste Regulations under CEPA govern trans border movement of hazardous waste and hazardous recyclable materials. These regulations require that anyone proposing to export or import hazardous waste or hazardous recyclable materials or transport them through Canada notify the Minister of the Environment and obtain a permit to do so.

Our Stalex facility is located in Blainville, Québec, Canada and is subject to QEQA. This Act, independently developed by the Province, regulates the generation, characterization, transport, treatment and disposal of hazardous wastes. QEQA also provides for the establishment of waste management facilities which are controlled by the provincial statutes and regulations governing releases to air, groundwater and surface water.

Our Tilbury, Ontario, Canada facility is subject to Regulation 347 of the Ontario Environmental Protection Act. Regulation 347, independently developed by the Province, regulates the collection, storage, transportation, treatment, recovery and disposal of hazardous wastes.

Waste transporters require a permit to operate under the Province's regulations and are also subject to the requirements of the Federal Transportation of Dangerous Goods law which requires reporting of quantities and disposition of materials shipped.

Table of Contents

A major difference between the United States regulatory regime and that in Canada relates to ownership and liability. Under Canadian federal regulation, ownership changes when waste is transferred to a properly permitted third party carrier and subsequently to an approved treatment and disposal facility. As a result, the generator is no longer liable for proper handling, treatment or disposal. In the United States, joint and several liability is retained by the waste generator as well as the transporter and the treatment and disposal facility.

Insurance, Financial Assurance and Risk Management

We carry a broad range of insurance coverage, including general liability, automobile liability, real and personal property, workers compensation, directors and officers liability, environmental impairment liability and other coverage customary to the industry. We do not expect the impact of any known casualty, property, environmental or other contingency to be material to our financial condition, results of operations or cash flows.

As noted above, applicable regulations require financial assurance to cover the cost of final closure and post closure obligations at certain of our operating and non operating disposal facilities. Acceptable forms of financial assurance include third party standby letters of credit, surety bonds and insurance. Alternatively, we may be required to collect fees from waste generators to fund dedicated, state controlled escrow or trust accounts during the operating life of the facility. Through December 31, 2017, we have met our financial assurance requirements through insurance, surety bonds, standby letters of credit and self funded restricted trusts.

Insurance policies covering our U.S. closure and post closure obligations expire in April 2018 and December 2018. While we expect to timely renew these policies as we have in the past, if we are unable to obtain adequate closure, post closure or environmental insurance, any partial or completely uninsured claim against us, if successful, could have a material adverse effect on our financial condition, results of operations and cash flows. Failure to maintain adequate financial assurance could also result in regulatory action including early closure of facilities. As of December 31, 2017, we have provided collateral of \$5.8 million in funded trust agreements, \$12.0 million in surety bonds, issued \$2.7 million in letters of credit for financial assurance and have insurance policies of approximately \$87.4 million for closure and post closure obligations. Financial assurance, premium and collateral cost requirement increases may have an adverse impact on our results of operations.

We maintain a surety bond for closure costs associated with the Blainville facility. Our lease agreement with the Province of Québec requires that the surety bond be maintained for 25 years after the lease expires. At December 31, 2017, we had \$752,000 in commercial surety bonds dedicated for closure obligations.

Primary casualty insurance programs generally do not cover accidental environmental contamination losses. To provide insurance protection for potential claims, we maintain pollution legal liability insurance and professional environmental consultant's liability insurance for non nuclear occurrences. For nuclear liability coverage, we maintain Facility Form and Workers' Form nuclear liability insurance provided under the federal Price Anderson Act. This insurance covers the operations of our facilities, suppliers and transporters. We purchase primary property, casualty and excess liability policies through traditional third party insurance carriers.

Significant Customers

No customer accounted for more than 10% of total revenue for the years ended December 31, 2017, 2016, or 2015.

Geographical Information

For the year ended December 31, 2017, we derived \$434.5 million or 86% of our revenue in the United States and \$69.5 million or 14% of our revenue in Canada. For the year ended December 31, 2016, we derived \$428.8 million or

90% of our revenue in the United States and \$48.9 million or 10% of our revenue in Canada. For the year ended December 31, 2015, we derived \$521.1 million or 93% of our revenue in the United States and \$42.0 million or 7% of our revenue in Canada. Additional information about the geographical areas in which our revenues are derived and in which our assets are located is presented in Note 20 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K.

Table of Contents

Seasonal Effects

Seasonal fluctuations due to weather and budgetary cycles can influence the timing of customer spending for our services. Typically, in the first quarter of each calendar year there is less demand for our services due to reduced construction activities related to weather. While large, multi year cleanup projects may continue in winter months, the pace of waste shipments may be slower, or stop temporarily, due to weather. Market conditions and federal funding decisions generally have a greater influence on the business than seasonality.

Personnel

On December 31, 2017, we had approximately 1,550 employees, of which approximately 200 in the United States and 100 in Canada were represented by various labor unions.

Executive Officers of Registrant

The following table sets forth the names, ages and titles, as well as a brief account of the business experience of each person who is currently an executive officer of US Ecology:

Name	Age	Title
Jeffrey R. Feeler	48	President and Chief Executive Officer
Simon G. Bell	47	Executive Vice President and Chief Operating Officer
Eric L. Gerratt	47	Executive Vice President, Chief Financial Officer and Treasurer
Steven D. Welling	59	Executive Vice President of Sales and Marketing
Andrew P. Marshall	51	Executive Vice President of Regulatory Compliance & Safety

Jeffrey R. Feeler was appointed President and Chief Executive Officer in May 2013. Mr. Feeler was previously the Company's senior executive as President and Chief Operating Officer from October 2012 to May 2013 and as the Company's Vice President and Chief Financial Officer from May 2007 to October 2012. He joined US Ecology in 2006 as Vice President, Controller, Chief Accounting Officer, Treasurer and Secretary. He previously held financial and accounting management positions with MWI Veterinary Supply, Inc., Albertson's, Inc. and Hewlett Packard Company. From 1993 to 2002, he held various accounting and auditing positions for PricewaterhouseCoopers LLP. Mr. Feeler is a Certified Public Accountant and holds a BBA of Accounting and a BBA of Finance from Boise State University.

Simon G. Bell was appointed Executive Vice President and Chief Operating Officer in November 2016. Mr. Bell previously served as the Company's Executive Vice President of Operations, Environmental Services from June 2014 to November 2016. From May 2013 to June 2014, he was Executive Vice President of Operations and Technology Development. From August 2007 to May 2013, he was Vice President of Operations. From 2005 to August 2007, he was Vice President of Hazardous Waste Operations. From 2002 to 2005, he was our Idaho facility General Manager and Environmental Manager. His 20 years of industry experience includes service as general manager of a competitor disposal facility and mining industry experience in Idaho, Nevada and South Dakota. He holds a BS in Geology from Colorado State University.

Eric L. Gerratt was appointed Executive Vice President, Chief Financial Officer and Treasurer in May 2013. Mr. Gerratt previously served as the Company's Vice President, Chief Financial Officer, Treasurer and Chief Accounting Officer from October 2012 to May 2013. He joined US Ecology in August 2007 as Vice President and Controller. He previously held various financial and accounting management positions at SUPERVALU, Inc. and Albertson's, Inc. From 1997 to 2003, he held various accounting and auditing positions for

PricewaterhouseCoopers LLP. Mr. Gerratt is a Certified Public Accountant and holds a BS in Accounting from the University of Idaho.

Steven D. Welling was appointed Executive Vice President of Sales and Marketing in May 2013. Mr. Welling previously served as the Company's Senior Vice President, Sales and Marketing from January 2010 to May 2013. He joined US Ecology in 2001 through the Envirosafe Services of Idaho acquisition. He previously served as National Accounts Manager for Envirosource Technologies and Western Sales Manager for Envirosafe Services of Idaho and before that managed new

Table of Contents

market development and sales for a national bulk chemical transportation company. Mr. Welling holds a BS from California State University Stanislaus.

Andrew P. Marshall was appointed Executive Vice President of Regulatory Compliance and Safety in May 2017. Mr. Marshall previously served as the Company's Senior Vice President, Regulatory Compliance and Safety from December 2014 to May 2017. He joined US Ecology in 2010 as Director of Environmental Compliance. He is a Professional Engineer with over 20 years experience assisting companies comply with environmental regulations, including past positions with Kleinfelder, a national environmental consulting firm, and Boise Cascade Corporation. Mr. Marshall holds a BS in Civil Engineering from Seattle University, an MS in Environmental Engineering from Oregon State University, and an MBA from Northwest Nazarene University.

ITEM 1A. RISK FACTORS

In addition to the factors discussed elsewhere in this Form 10 K, the following are important factors which could cause actual results or events to differ materially from those contained in any forward looking statements made by or on behalf of us.

Risks Affecting All of Our Businesses

The completion of, loss of or failure to renew one or more significant contracts could adversely affect our profitability.

We provide disposal and transportation services to customers on discrete Event Business (non recurring project based work) which varies widely in size, duration and unit pricing. Some of these multi year projects can account for a significant portion of our revenue and profit. The replacement of 2017 Event Business revenue and earnings depends on multiple factors, many of which are outside of our control including, but not limited to, general and industry specific economic conditions, capital in the commercial credit markets, general level of government funding on environmental matters, real estate development and other industrial investment opportunities. Our inability to replace the contribution from 2017 Event Business projects with new business could result in a material adverse effect on our financial condition and results of operations.

Our market is highly competitive. Failure to compete successfully could have a material adverse effect on our business, financial condition and results of operations.

We face competition from companies with greater resources than us, companies with closer geographic proximity to waste sites, companies with service offerings we do not provide and companies that can provide lower pricing than we can in certain instances. An increase in the number or location of commercial treatment or disposal facilities for hazardous or radioactive waste, significant expansion of existing competitor permitted capabilities, acquisitions by competitors or a decrease in the treatment or disposal fees charged by competitors could materially and adversely affect our results of operations. Our business is also heavily affected by waste disposal fees imposed by government agencies. These fees, which vary from state to state and are periodically adjusted, may adversely impact the competitive environment in which we operate.

Adverse economic conditions, government funding or competitive pressures affecting our customers could harm our business.

We serve oil refineries, chemical production plants, steel mills, real estate developers, waste brokers/aggregators serving small manufacturers and other industrial customers that are, or may be, affected by changing economic conditions and competition. These customers may be significantly impacted by deterioration in the general economy and may curtail waste production and/or delay spending on plant maintenance, waste cleanup projects and other discretionary work. Spending by government customers may also be reduced or temporarily suspended due to declining tax revenues that may result from a general deterioration in economic conditions or other federal or state fiscal policy. Factors that can impact general economic conditions and the level of spending by customers include the general level of consumer and industrial spending, increases in fuel and energy costs, residential and commercial real estate and mortgage market conditions, labor and healthcare costs, access to credit, consumer confidence and other macroeconomic factors affecting spending behavior.

Table of Contents

Market forces may also compel customers to cease or reduce operations, declare bankruptcy, liquidate or relocate to other countries, any of which could adversely affect our business.

Our operations are significantly affected by the commencement and completion of large and small cleanup projects; potential seasonal fluctuations due to weather; budgetary decisions and cash flow limitations influencing the timing of customer spending for remedial activities; the timing of regulatory agency decisions and judicial proceedings; changes in government regulations and enforcement policies and other factors that may delay or cause the cancellation of cleanup projects. We do not control such factors, which can cause our revenue and income to vary significantly from quarter to quarter and year to year.

If we fail to comply with applicable laws and regulations our business could be adversely affected.

The changing regulatory framework governing our business creates significant risks. We could be held liable if our operations cause contamination of air, groundwater or soil or expose our employees or the public to contamination. Under current law, we may be held liable for damage caused by conditions that existed before we acquired the assets or operations involved. Also, we may be liable if we arrange for the transportation, disposal or treatment of hazardous substances that cause environmental contamination at facilities operated by others, or if a predecessor made such arrangements and we are a successor. Liability for environmental damage could have a material adverse effect on our financial condition, results of operations and cash flows.

Stringent regulations of federal, state or provincial governments have a substantial impact on our business. Local government controls may also apply. Many complex laws, rules, orders and regulatory interpretations govern environmental protection, health, safety, noise, visual impact, odor, land use, zoning, transportation and related matters. Failure to obtain on a timely basis or comply with applicable federal, state, provincial and local governmental regulations, licenses, permits or approvals for our waste treatment and disposal facilities could prevent or restrict our ability to provide certain services, resulting in a potentially significant loss of revenue and earnings. Changes in environmental regulations may require us to make significant capital or other expenditures, or limit operations. Changes in laws or regulations or changes in the enforcement or interpretation of existing laws, regulations or permitted activities may require us to modify existing operating licenses or permits, or obtain additional approvals or limit operations. New governmental requirements that raise compliance standards or require changes in operating practices or technology may impose significant costs and/or limit operations.

Our revenue is primarily generated as a result of requirements imposed on our customers under federal, state, and provincial laws and regulations to protect public health and the environment. If requirements to comply with laws and regulations governing management of PCB, hazardous or radioactive waste were relaxed or less vigorously enforced, demand for our services could materially decrease and our revenues and earnings could be significantly reduced.

Failure to realize the anticipated benefits and operational performance from previously acquired operations could lead to an impairment of goodwill or other intangible assets.

As a result of acquisitions since 2010, we have goodwill of \$189.4 million and indefinite lived intangible assets of \$48.4 million at December 31, 2017. We are required to test goodwill and intangible assets with indefinite useful lives at least annually to determine if impairment has occurred. The testing of goodwill and other intangible assets for impairment requires us to make significant estimates about future performance and cash flows, as well as other assumptions. These estimates can be affected by numerous factors, including potential changes in economic, industry or market conditions, changes in laws or regulations, changes in business operations, changes in competition or changes in our stock price and market capitalization. Changes in these factors, or changes in actual performance compared with estimates of our future performance, may affect the fair value of goodwill or other intangible assets, which may result in an impairment charge.

Based on the results of those tests during the fourth quarter of 2017, we recorded a \$5.5 million goodwill impairment charge in our Resource Recovery reporting unit and a \$3.4 million impairment charge on the indefinite-lived intangible assets of our Resource Recovery business.

Table of Contents

Estimates of the future performance of our reporting units assume a certain level of revenue and earnings growth over the projection period. The projected revenue and earnings growth is based on various factors and assumptions that we consider to be reasonable, including, but not limited to, growth in the industries served by the Field Services reporting unit, successful implementation of our business and marketing strategies for this reporting unit and continuing favorable market conditions for the customers we serve. Should any of these assumptions turn out not to be true and the projected growth not occur for these or other reasons, or the reporting units otherwise fail to meet their current financial plans, or there are changes to any other key assumptions used in the estimates, the financial performance of these reporting units could result in a future goodwill impairment.

We cannot accurately predict the amount and timing of any impairment of assets. Should the value of goodwill or other intangible assets become impaired as a result of a failure to realize the anticipated benefits and operational performance of acquired operations, our financial condition and results of operations could be adversely impacted.

Unanticipated changes in our tax provisions or adverse outcomes resulting from examination of our income tax returns could adversely affect our results of operations.

We are subject to income taxes in the United States, Canada, and various state and local jurisdictions. Our effective income tax rate could be adversely affected by changes in tax laws or interpretations of those tax laws, or by changes in the valuation of our deferred tax assets and liabilities. On December 22, 2017, the Tax Cuts and Jobs Act of 2017 (the “Tax Act”), was signed into law making significant changes to the Internal Revenue Code. This Tax Act reduced the U.S. statutory corporate tax rate from 35% to 21% and made other changes that could have a favorable impact on our overall U.S. federal tax liability in a given period. However, the Tax Act also included a number of provisions that limit or eliminate various deductions that could affect our U.S. federal income tax position. We continue to examine the impact the Tax Act may have on our business. The impact of the Tax Act is uncertain and could be adverse. While we expect the Tax Act to be favorable to the Company overall, there can be no assurance that changes in tax laws or regulations, both within the U.S. and the other jurisdictions in which we operate, will not materially and adversely affect our effective tax rate, tax payments, financial condition and results of operations. See Note 16 to the Consolidated Financial Statements in “Part II, Item 8, Financial Statements and Supplementary Data” of this Annual Report on Form 10-K for additional information. Additionally, our effective tax rate may be affected by the tax effects of acquisitions or restructuring activities we may undertake, changes in share-based compensation, newly enacted tax legislation and uncertain tax positions we may take in the short term in response to such legislation. Finally, we are subject to the examination of our income tax returns by the Internal Revenue Service and other tax authorities which may result in the assessment of additional income taxes. We regularly assess the likelihood of adverse outcomes resulting from these examinations to determine the adequacy of our provision for income taxes. However, unanticipated outcomes from examinations could have a material adverse effect on our business, financial condition and results of operations.

Our indebtedness may limit the amount of cash flow available to invest in the ongoing needs of our business, and our credit agreement restricts our ability to engage in certain corporate and financial transactions.

On April 18, 2017, the Company entered into a new senior secured credit agreement (the “New Credit Agreement”) with Wells Fargo Bank, National Association (“Wells Fargo”), as administrative agent for the lenders, swingline lender and issuing lender, and Bank of America, N.A., as an issuing lender, that provides for a \$500.0 million, five-year revolving credit facility (the “Revolving Credit Facility”), including a \$75.0 million sublimit for the issuance of standby letters of credit and a \$25.0 million sublimit for the issuance of swingline loans used to fund short-term working

capital requirements. The New Credit Agreement also contains an accordion feature whereby the Company may request up to \$200.0 million of additional funds through an increase to the Revolving Credit Facility, through incremental term loans, or some combination thereof. As of December 31, 2017, we had total indebtedness of \$277.0 million, comprised entirely of revolving credit loans under the Revolving Credit Facility. These revolving credit loans are due upon the earliest to occur of (a) April 18, 2022 (or, with respect to any lender, such later date as requested by us and accepted by such lender), (b) the date of termination of the entire revolving credit commitment (as defined in the New Credit Agreement) by us, and (c) the date of termination of the revolving credit commitment. The New Credit Agreement makes us vulnerable to adverse general economic or industry conditions and increases in interest rates, as borrowings under our senior secured credit facilities are at variable rates; and limits our ability to obtain additional financing in the future for working capital or other purposes.

Table of Contents

In addition, the New Credit Agreement and related ancillary agreements with our lenders contain certain covenants that, among other things, restrict our ability to incur additional indebtedness, pay dividends and make other restricted payments, repurchase shares of outstanding stock, create certain liens and engage in certain types of transactions. Our ability to borrow under the New Credit Agreement depends upon our compliance with the restrictions contained in the New Credit Agreement and events beyond our control could affect our ability to comply with these covenants.

Failure to perform under our contracts may adversely harm our business.

Certain contracts require us to meet specified performance criteria. Our ability to meet these criteria requires that we expend significant resources. If we or our subcontractors are unable to perform as required, we could be subject to substantial monetary penalties and/or loss of the affected contracts which may adversely affect our business.

Loss of key management or sales personnel could harm our business.

We have an experienced management team including general managers at our operating facilities and rely on the continued service of these senior managers to achieve our objectives. Our objective is to retain our present management and sales teams and identify, hire, train, motivate and retain other highly skilled personnel. The loss of any key management employee or sales personnel could adversely affect our business and results of operations.

A change or deterioration in labor relations could disrupt our business or increase costs, which could have a material adverse effect on our business, financial condition and results of operations.

The Company is a party to collective bargaining agreements covering approximately 300, or approximately 22%, of our employees. The agreements expire on May 31, 2018, November 30, 2020 and April 30, 2022, respectively. While we believe the Company will maintain good working relations with its employees on acceptable terms, there can be no assurance that we will be able to negotiate the terms of future agreements in a manner acceptable to the Company. Potential work disruptions from labor disputes may disrupt our businesses and adversely affect our financial condition and results of operations.

Our participation in multi employer pension plans may subject us to liabilities that could materially adversely affect our liquidity, cash flows and results of operations.

Certain of the Company's wholly owned subsidiaries participate in multi employer defined benefit pension plans under the terms of collective bargaining agreements covering most of the subsidiaries' union employees. To the extent that those plans are underfunded, the Employee Retirement Income Security Act of 1974, as amended by the Multi Employer Pension Plan Amendments Act of 1980 ("ERISA"), may subject us to substantial liabilities if we withdraw from such multi employer plans or if they are terminated. Under current law regarding multi employer defined benefit plans, a plan's termination, an employer's voluntary partial or complete withdrawal from, or the mass withdrawal of all contributing employers from, an underfunded multi employer defined benefit plan requires participating employers to make payments to the plan for their proportionate share of the multi employer plan's unfunded vested liabilities. Furthermore, the Pension Protection Act of 2006 added new funding rules generally applicable to plan years beginning after 2007 for multi employer plans that are classified as "endangered," "seriously endangered," or "critical" status. If plans in which we participate are in critical status, benefit reductions may apply and/or we could be required to make additional contributions. Contributions to these funds could also increase as a result of future collective bargaining with the unions, a shrinking contribution base as a result of the insolvency of other companies who currently contribute to these funds, failure of the Plan to meet ERISA's minimum funding requirements, lower than expected returns on pension fund assets, or other funding deficiencies. Any of the foregoing events could materially adversely affect our liquidity, cash flows and results of operations.

Based upon the information available to us from plan administrators as of April 30, 2017, certain of the multi employer pension plans in which we participate are underfunded. The Pension Protection Act requires that underfunded pension plans improve their funding ratios within prescribed intervals based on the level of their underfunding. In addition, if a multi employer defined benefit plan fails to satisfy certain minimum funding requirements, the Internal Revenue Service may impose a nondeductible excise tax of 5% on the amount of the accumulated funding deficiency for those employers contributing to the fund. We have been notified that certain plans to which our subsidiaries contribute are in “critical”

Table of Contents

status and these plans may require additional contributions in the form of a surcharge on future benefit contributions required for future work performed by union employees covered by these plans. As a result, we expect our required contributions to these plans to increase in the future. The amount of additional funds we may be obligated to contribute in the future cannot be estimated, as such amounts will be based on future levels of work that require the specific use of the union employees covered by these plans, investment returns and the level of underfunding of such plans.

We may not be able or willing to pay future dividends.

Our ability to pay dividends is subject to our future financial condition and certain conditions such as continued compliance with covenants contained in the New Credit Agreement. Our Board of Directors must also approve any dividends at their sole discretion. Pursuant to the New Credit Agreement, we may only declare quarterly or annual dividends if on the date of declaration, no event of default has occurred and no other event or condition has occurred that would constitute an event of default due to the payment of the dividend. Unforeseen events or situations could cause non-compliance with these covenants, or cause the Board of Directors to discontinue or reduce the amount of any future dividend payment.

Future stock issuances could adversely affect common stock ownership interest and rights in comparison with those of other security holders.

Our Board of Directors has the authority to issue additional shares of common stock or preferred stock without stockholder approval. If additional funds are raised through the issuance of equity or securities convertible into common stock, or we use shares of our common stock to pay a portion of the purchase price in any future acquisition, the percentage of ownership of our existing stockholders would be reduced, and these newly issued securities may have rights, preferences or privileges senior to those of existing stockholders. If we issue additional common stock or securities convertible into common stock, such issuance would reduce the proportionate ownership and voting power of each other stockholder. In addition, such stock issuances might result in a reduction of the book value of our common stock.

Anti-takeover provisions in our organizational documents and under Delaware law may impede or discourage a takeover, which could cause the market price of our common stock to decline.

We are a Delaware corporation, and the anti-takeover provisions of Delaware law impose various impediments to the ability of a third party to acquire control of us, even if a change in control would be beneficial to our existing stockholders, which, under certain circumstances, could reduce the market price of our common stock. In addition, protective provisions in our Restated Certificate of Incorporation and Amended and Restated Bylaws or the implementation by our Board of Directors of a stockholder rights plan could prevent a takeover, which could harm our stockholders.

The price of our common stock has fluctuated in the past and this may make it difficult for stockholders to resell shares of common stock at times or may make it difficult for stockholders to sell shares of common stock at prices they find attractive.

The trading price of our common stock may fluctuate widely as a result of a number of factors, many of which are outside our control. In addition, the stock market is subject to fluctuations in share prices and trading volumes that affect the market prices of the shares of many companies. These broad market fluctuations have adversely affected, and may in the future adversely affect, the market price of our common stock. Among the factors that could affect our stock price are:

- changes in financial estimates and buy/sell recommendations by securities analysts or our failure to meet analysts' revenue or earnings estimates;
- actual or anticipated variations in our operating results;
- our earnings releases and financial performance;
- market conditions in our industry and the general state of the securities markets;

Table of Contents

- fluctuations in the stock price and operating results of our competitors;
- actions by institutional stockholders;
- investor perception of us and the industry and markets in which we operate;
- general economic conditions in the United States and Canada;
- international disorder and instability in foreign financial markets, including but not limited to potential sovereign defaults; and
- other factors described in “Risk Factors.”

A cybersecurity incident could negatively impact our business and our relationships with customers.

We use computers in substantially all aspects of our business operations. We also use mobile devices and other online activities to connect with our employees and our customers. Such uses of technology give rise to cybersecurity risks, including security breach, espionage, system disruption, theft and inadvertent release of information. Our business involves the storage and transmission of numerous classes of sensitive and/or confidential information and intellectual property, including customers’ personal information, private information about employees, and financial and strategic information about the Company and its business partners. Further, if the Company in the future pursues acquisitions or new initiatives that require expanding or improving our information technologies, this may result in a larger technological presence and corresponding exposure to cybersecurity risk. If we fail to assess and identify cybersecurity risks associated with acquisitions and new initiatives, we may become increasingly vulnerable to such risks. Further, despite these security measures, the Company’s computer systems and infrastructure may be vulnerable to attacks by hackers or breached due to employee error, malfeasance, or other disruptions. Additionally, while we have implemented measures to prevent security breaches and cyber incidents, our preventative measures and incident response efforts may not be entirely effective. The theft, destruction, loss, misappropriation, or release of sensitive and/or confidential information or intellectual property, or interference with our information technology systems or the technology systems of third parties on which we rely, could result in business disruption, negative publicity, brand damage, violation of privacy laws, loss of customers, potential liability and competitive disadvantage.

Additional Risks of Our Environmental Services Business

A significant portion of our business depends upon non-recurring event cleanup projects over which we have no control.

A significant portion of our disposal revenue is attributable to discrete Event Business which varies widely in size, duration and unit pricing. For the year ended December 31, 2017, approximately 22% of our T&D revenue was derived from Event Business projects. The one-time nature of Event Business, diverse spectrum of waste types received and widely varying unit pricing necessarily creates variability in revenue and earnings. This variability may be influenced by general and industry-specific economic conditions, funding availability, changes in laws and regulations, government enforcement actions or court orders, public controversy, litigation, weather, commercial real estate, closed military bases and other project timing, government appropriation and funding cycles and other factors. This variability can cause significant quarter-to-quarter and year-to-year differences in revenue, gross profit, gross margin, operating income and net income. Also, while we pursue many large projects months or years in advance of work performance, both large and small cleanup project opportunities routinely arise with little or no prior notice. These market dynamics are inherent to the waste disposal business and are factored into our projections and externally communicated business outlook statements. Our projections combine historical experience with identified sales pipeline opportunities, new or expanded service line projections and prevailing market conditions. A reduction in the number and size of new cleanup projects won to replace completed work could have a material adverse effect on our financial condition and results of operations.

Table of Contents

If we are unable to obtain regulatory approvals and contracts for construction of additional disposal space by the time our current disposal capacity is exhausted, our business would be adversely affected.

Construction of new disposal capacity at our operating disposal facilities beyond currently permitted capacity requires state and provincial regulatory agency approvals. Administrative processes for such approval reviews vary. The State of Texas, which regulates our Robstown facility, provides for an adjudicatory hearing process administered by a hearing officer appointed by the State. There can be no assurance that we will be successful in obtaining future expansion approvals in a timely manner or at all. If we are not successful in receiving these approvals, our disposal capacity could eventually be exhausted, preventing us from accepting additional waste at an affected facility. This would have a material adverse effect on our business.

If we are unable to renew our operating permits or lease agreements with regulatory bodies, our business would be adversely affected.

Our facilities operate using permits and licenses issued by various regulatory bodies at various state, provincial and federal government levels. In addition, three of our facilities operate on land leased from government agencies. Failure to renew our permits and licenses necessary to operate our facilities or failure to renew or maintain compliance with our site lease agreements would have a material adverse effect on our business. There can be no assurance we will continue to be successful in obtaining timely permit applications approval, maintaining compliance with our lease agreements and obtaining timely lease renewals.

Our business requires the handling of dangerous substances. Improper handling of such substances could result in an adverse impact on our financial condition and results of operations.

We are subject to unexpected occurrences related, or unrelated, to the routine handling of dangerous substances. A fire or other incident could impair the ability of one or more facilities to continue to perform normal operations, which could have a material adverse impact on our financial condition and results of operations. Improper handling of these substances could also violate laws and regulations resulting in fines and/or suspension of operations.

If we are unable to obtain at a reasonable cost or under reasonable terms and conditions the necessary levels of insurance and financial assurances required for operations, our business and results of operations would be adversely affected.

We are required by law, license, permit and prudence to maintain various insurance instruments and financial assurances. We carry a broad range of insurance coverages that we believe are customary for a company of our size in our business. We obtain these coverages to mitigate risk of loss, allowing us to manage our self insured exposure from potential claims. We are self insured for employee health care coverage. Stop loss insurance is carried covering liability on claims in excess of \$200,000 per individual. Accrued costs related to the self insured health care coverage were \$1.1 million and \$1.0 million at December 31, 2017 and 2016, respectively. We also maintain a Pollution and Remediation Legal Liability Policy pursuant to RCRA regulations subject to a \$250,000 self insured retention. In addition, we are insured for consultant's environmental liability subject to a \$100,000 self insured retention. We are also insured for losses or damage to third party property or people subject to a \$100,000 self insured retention. If our insurers were unable to meet their obligations, or our own obligations for claims were more than expected, there could be a material adverse effect to our financial condition and results of operation.

Through December 31, 2017, we have met our financial assurance requirements through a combination of insurance policies, commercial surety bonds and trust funds. Our insurance policies covering closure and post closure activities expire in April 2018 and December 2018 for covered U.S. operating facilities (dedicated state controlled closure and post closure funds provide financial assurance for our Washington and Nevada facilities). We continue to use

self funded trust accounts for our post closure obligations at our U.S. non operating sites. We use commercial surety bonds for our Canadian operations that expire in November and December 2018, respectively. We currently have in place all financial assurance instruments necessary for our operations. While we expect to continue renewing these policies and surety bonds, if we were unable to obtain adequate closure, post closure or environmental insurance, bonds or other instruments in the future, any partially or completely uninsured claim against us, if successful and of sufficient magnitude, could have a

Table of Contents

material adverse effect on our results of operations and cash flows. Additionally, continued access to casualty and pollution legal liability insurance with sufficient limits, at acceptable terms, is important to obtaining new business. Failure to maintain adequate financial assurance could also result in regulatory action including early closure of facilities. As of December 31, 2017, we have provided collateral of \$5.8 million in funded trust agreements, \$12.0 million in surety bonds, issued \$2.7 million in letters of credit for financial assurance and have insurance policies of approximately \$87.4 million for closure and post closure obligations at covered U.S. operating facilities. We have \$752,000 in commercial surety bonds dedicated for closure obligations at our Canadian operating facility. While we believe we will be able to maintain the requisite financial assurance policies at a reasonable cost, premium and collateral requirements may materially increase. Such increases could have a material adverse effect on our financial condition and results of operations.

The hazardous and radioactive waste industries in which we operate are subject to litigation risk.

The handling of radioactive, PCBs and hazardous material subjects us to potential liability claims by employees, contractors, property owners, neighbors and others. There can be no assurance that our existing liability insurance is adequate to cover claims asserted against us or that we will be able to maintain adequate insurance in the future. Adverse rulings in judicial or administrative proceedings could also have a material adverse effect on our financial condition and results of operations.

We may not be able to obtain timely or cost effective transportation services which could adversely affect our profitability.

Revenue at each of our facilities is subject to potential risks from disruptions in rail or truck transportation services relied upon to deliver waste to our facilities. Increases in fuel costs and unforeseen events such as labor disputes, public health pandemics, severe weather, natural disasters and other acts of God, war or terror could prevent or delay shipments and reduce both volumes and revenue. Our rail transportation service agreements with our customers generally allow us to pass on fuel surcharges assessed by the railroads. This may decrease or eliminate our exposure to fuel cost increases. Transportation services may be limited by economic conditions, including increased demand for rail or trucking services, resulting in periods of slower service to the point that individual customer needs cannot be met. No assurance can be given that we can procure transportation services in a timely manner at competitive rates or pass through fuel cost increases in all cases. Such factors could also limit our ability to achieve revenue and earnings objectives.

We may not be able to effectively adopt or adapt to new or improved technologies.

We expect to continue implementing new or improved technologies at our facilities to meet customer service demands and expand our business. If we are unable to identify and implement new technologies in response to market conditions and customer requirements in a timely, cost effective manner, our financial condition and results of operations could be adversely impacted.

Our financial results could be adversely affected by foreign exchange fluctuations.

We operate in the United States and Canada but report revenue, costs and earnings in U.S. dollars. Exchange rates between the U.S. dollar and the Canadian dollar are likely to fluctuate from period to period. Because our financial results are reported in U.S. dollars, we are subject to the risk of non cash translation losses for reporting purposes. If we continue to expand our international operations, we will conduct more transactions in currencies other than the U.S. dollar. To the extent that foreign revenue and expense transactions are not denominated in the local currency, we are further subject to the risk of transaction losses. We have not entered into derivative instruments to offset the impact of foreign exchange fluctuations. Fluctuations in foreign currency exchange rates could have a material

adverse effect on our financial condition and results of operations.

We are subject to risks associated with operating in a foreign country.

Our Canadian subsidiaries' facilities are located in Blainville, Québec and Tilbury, Ontario, Canada and use the Canadian dollar as their functional currency. International operations are subject to risks that may have material adverse effects on

24

Table of Contents

our financial condition and results of operations. The risks that our international operations are subject to include, among other things:

- difficulties and costs relating to staffing and managing foreign operations;
- foreign labor union relations;
- fluctuations in the value of the Canadian dollar;
- repatriation of cash from Canadian subsidiaries to the United States;
- imposition of additional taxes on our foreign income; and
- regulatory, economic and public policy changes.

Additional Risks of Our Field & Industrial Services Business

A significant portion of our Field & Industrial Services segment depends upon the demand for cleanup of spills and other remedial projects and regulatory developments over which we have no control.

A significant portion of our Field & Industrial Services segment consists of remediation, recycling, industrial cleaning and maintenance, transportation, total waste management, technical services, and emergency response services. Demand for these services can be affected by the commencement and completion of cleanup of major spills and other events, customers' decisions to undertake remedial projects, seasonal fluctuations due to weather and budgetary cycles influencing the timing of customers' spending for remedial activities, the timing of regulatory decisions relating to hazardous waste management projects, changes in regulations governing the management of hazardous waste, changes in the waste processing industry towards waste minimization and the propensity for delays in the demand for remedial services, and changes in governmental regulations relevant to our diverse operations. We do not control such factors and, as a result, our revenue and income can vary from quarter to quarter or year to year, and past financial performance may not be a reliable indicator of future performance.

Additional Risks of Completed and Potential Acquisitions

Acquisitions that we undertake could be difficult to integrate, disrupt our business, dilute stockholder value and adversely affect our results of operations.

Acquisitions involve multiple risks. Our inability to successfully integrate an acquired business could have a material adverse effect on our financial condition and results of operations. These risks include but are not limited to:

- failure of the acquired company to achieve anticipated revenues, earnings or cash flows;
- assumption of liabilities, including those related to environmental matters, that were not disclosed to us or that exceed our estimates;
- problems integrating the purchased operations with our own, which could result in substantial costs and delays or other operational, technical or financial problems;
- potential compliance issues relating to the protection of health and the environment, compliance with securities laws and regulations, adequacy of internal controls and other matters;
 - diversion of management's attention or other resources from our existing business;
- risks associated with entering markets or product/service areas in which we have limited prior experience;

Table of Contents

- increases in working capital investment to fund the growth of acquired operations;
- unexpected capital expenditures to upgrade waste handling or other infrastructure or replace equipment to operate safely and efficiently;
- potential loss of key employees and customers of the acquired company; and
- future write offs of intangible and other assets, including goodwill, if the acquired operations fail to generate sufficient cash flows.

If we are not able to achieve these objectives, the anticipated benefits of the acquisition may not be realized fully, if at all, or may take longer to realize than expected. It is possible that the integration process could result in the loss of key employees, the disruption of our ongoing business, failure to implement the business plan for the combined businesses, unanticipated issues in integrating service offerings, logistics information, communications and other systems or other unanticipated issues, expenses and liabilities, any or all of which could adversely affect our ability to maintain relationships with customers and employees or to achieve the anticipated benefits of the acquisition.

In the event that we undertake future acquisitions, we may not be able to successfully execute our acquisition strategy.

We may experience delays in making acquisitions or be unable to make acquisitions we desire for a number of reasons. Suitable acquisition candidates may not be available at purchase prices that are attractive to us or on terms that are acceptable to us. In pursuing acquisition opportunities, we typically compete with other companies, some of which have greater financial and other resources than we do. We may not have available funds or common stock with a sufficient market price to complete an acquisition. If we are unable to secure sufficient funding for potential acquisitions, we may not be able to complete acquisitions that we otherwise find advantageous.

The timing and number of acquisitions we pursue may cause volatility in our financial results.

We are unable to predict the size, timing and number of acquisitions we may complete, if any. In addition, we may incur expenses associated with sourcing, evaluating and negotiating acquisitions (including those that are not completed), and we also may pay fees and expenses associated with financing acquisitions to investment banks and others. Any of these amounts may be substantial, and together with the size, timing and number of acquisitions we pursue, may negatively impact and cause significant volatility in our financial results and the price of our common stock.

ITEM 2. PROPERTIES

The following table describes our principal physical properties and facilities at December 31, 2017 owned or leased by us. We believe that our existing properties are in good condition and suitable for conducting our business.

Location	Segment	Function	Own/Lease
Beatty, Nevada	Environmental Svcs.	Waste treatment and landfill disposal	Lease
Robstown, Texas	Environmental Svcs.	Waste treatment, landfill disposal and recycling	Own
Grand View, Idaho	Environmental Svcs.	Waste treatment and landfill disposal	Own
Belleville, Michigan	Environmental Svcs.	Waste treatment and landfill disposal	Own
Blainville, Québec, Canada	Environmental Svcs.	Waste treatment and landfill disposal	Own/Lease
Richland, Washington	Environmental Svcs.	Landfill disposal	Sublease
Detroit, Michigan	Environmental Svcs.	Waste treatment	Own
Canton, Ohio	Environmental Svcs.	Waste treatment and recycling	Own
Harvey, Illinois	Environmental Svcs.	Waste treatment	Own
York, Pennsylvania	Environmental Svcs.	Waste treatment	Own
Tulsa, Oklahoma	Environmental Svcs.	Waste treatment	Own
Romulus, Michigan	Environmental Svcs.	Recycling	Own
Mt. Airy, North Carolina	Environmental Svcs.	Waste treatment	Own
Tilbury, Ontario, Canada	Environmental Svcs.	Waste treatment	Own
Vernon, California	Environmental Svcs.	Waste treatment	Own
Sulligent, Alabama	Field & Industrial Svcs.	Field and industrial waste management	Own
Tampa, Florida	Field & Industrial Svcs.	Field and industrial waste management	Own
Taylor, Michigan	Field & Industrial Svcs.	Field and industrial waste management	Own
Bayonne, New Jersey	Field & Industrial Svcs.	Field and industrial waste management	Lease
Atlanta, Georgia	Field & Industrial Svcs.	Field and industrial waste management	Lease
Wrentham, Massachusetts	Field & Industrial Svcs.	Field and industrial waste management	Own
Boise, Idaho	Corporate	Corporate Office	Lease
Livonia, Michigan	Corporate	Regional Office	Lease

In addition to the principal physical properties detailed in the table above, the Company owns or leases a number of smaller (less than 20,000 sq. ft.) properties supporting our Field & Industrial Services segment.

The following table provides additional information for our treatment facilities with onsite landfills including total acreage owned or controlled by us at each facility, estimated amount of permitted airspace available at each facility, the estimated amount of non permitted airspace and the estimated life at each facility. All estimates are as of December 31, 2017.

Location	Total Acreage	Permitted Airspace (Cubic Yards)	Non Permitted Airspace (Cubic Yards)	Estimated Life (Years)
Beatty, Nevada(1)	480	8,372,147	—	33
Robstown, Texas(2)	873	658,713	—	2
Grand View, Idaho(3)	1,411	10,354,623	18,100,000	233

Edgar Filing: US ECOLOGY, INC. - Form 10-K

Belleville, Michigan(4)	455	11,829,818	—	30
Blainville, Québec, Canada(5)	350	5,432,637	—	29
Richland, Washington(6)	100	547,125	—	38
Total		37,195,063	18,100,000	

(1) Our Beatty, Nevada facility, which began receiving hazardous waste in 1970, is located in the Amargosa Desert approximately 120 miles northwest of Las Vegas, Nevada and approximately 30 miles east of Death Valley, California. The facility operates through an operating agreement with the State of Nevada on 480 acres owned by the State. In 2016, the facility secured permit modifications from the Nevada Division of Environmental Protection and the USEPA authorizing the construction of a new landfill unit at the facility. The first phase of this new landfill was

Table of Contents

completed in 2017. In April 2007, we renewed our lease with the State of Nevada as a year to year periodic tenancy until (i) that area reaches full capacity and can no longer accept waste (an estimated life of 33 years using 2017 volume); (ii) the lease is terminated by us at our option; or (iii) the State terminates the lease due to our breach of the lease terms. The State of Nevada assesses disposal fees to fund a dedicated trust account to pay for future closure and post closure costs.

- (2) Our Robstown, Texas facility began operations in 1973. It is located on 240 acres owned by the Company approximately 10 miles west of Corpus Christi, Texas. We own an additional 633 acres of adjacent land for future expansion. We also own 174 acres of land five miles west of the facility adjacent to a rail line where we have operated a rail transfer station since 2006. In January 2018, the Texas Commission of Environmental Quality approved our permit for landfill expansion onto 180 acres of our adjacent land that we anticipate will add approximately 10 million cubic yards, or 30 years, of future airspace.
- (3) Our Grand View, Idaho facility, purchased in 2001, is located on 1,252 acres of Company owned land approximately 60 miles southeast of Boise, Idaho in the Owyhee Desert. We own an additional 159 acres approximately two miles east of the facility that provides a clay source for site operations (liner construction and waste treatment). We also own 189 acres where our rail transfer station is located approximately 30 miles northeast of the disposal facility. This site has two enclosed rail to truck waste transfer facilities located adjacent to the main line of the Union Pacific Railroad.
- (4) Our Belleville, Michigan facility began operations in 1957 and began disposing of waste in the onsite landfill in 1969. The facility is located on 455 acres owned by the Company approximately 30 miles from Detroit, Michigan. We also own 12 acres of land nine miles from the facility adjacent to a rail line where we have operated a rail transfer station since 1998.
- (5) Our Blainville, Québec, Canada facility has been in operation since 1983 and is located approximately 30 miles northwest of Montreal, Québec, Canada. The facility includes an indoor hazardous and industrial waste treatment and storage facility and a rail transfer station located on 25 acres adjacent to a 325 acre disposal site. The treatment processing facility is on land owned by the Company. The disposal site which is adjacent to the owned treatment processing facility is leased from the Province of Québec with a term through 2018 and one five year renewal option. The site is permitted to accept up to 875,000 metric tons (962,500 U.S. tons) over the five year permit period. Of this amount, up to 350,000 metric tons (385,000 U.S. tons) can be accepted as soil. While there are no specific restrictions on waste soils received from the U.S., non soil waste received from the U.S. is limited to 350,000 metric tons (385,000 U.S. tons) over the five year permit period. The Province assesses fees to fund a dedicated government trust account to pay for post closure costs at the disposal site.
- (6) Our Richland, Washington LLRW facility has been in operation since 1965 and is located on 100 acres of land leased by the State of Washington from the federal government on the U.S. Department of Energy Hanford Reservation approximately 35 miles west of Richland, Washington. We sublease this property from the State of Washington. The lease between the State of Washington and the federal government expires in 2063. We renewed our sublease with the State in 2005 for ten years with four ten year renewal options, giving us control of the property until the year 2055 provided that we meet our obligations and operate in a compliant manner. The facility's intended operating life is equal to the period of the sublease. The State assesses user fees for local economic development, state regulatory agency expenses and a dedicated trust account to pay for long term care after the facility closes. The State maintains separate, dedicated trust funds for future closure and post closure costs.

ITEM 3. LEGAL PROCEEDINGS

In the ordinary course of business, we are involved in judicial and administrative proceedings involving federal, state, provincial or local governmental authorities, including regulatory agencies that oversee and enforce compliance with permits. Fines or penalties may be assessed by our regulators for non compliance. Actions may also be brought by individuals or groups in connection with permitting of planned facilities, modification or alleged violations of existing permits, or alleged damages suffered from exposure to hazardous substances purportedly released from our operated sites, as well as other litigation. We maintain insurance intended to cover property and damage claims asserted as a

result of our

28

Table of Contents

operations. Periodically, management reviews and may establish reserves for legal and administrative matters, or other fees expected to be incurred in relation to these matters.

We are not currently a party to any material pending legal proceedings and are not aware of any other claims that could, individually or in the aggregate, have a materially adverse effect on our financial position, results of operations or cash flows.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Common Stock Price

Our common stock is listed on the NASDAQ Global Select Market under the symbol ECOL. As of January 17, 2018, there were approximately 14,079 beneficial owners of our common stock. High and low sales prices for the common stock for each quarter in the last two years are shown below:

	2017		2016	
	High	Low	High	Low
First Quarter	\$ 54.00	\$ 44.95	\$ 44.68	\$ 29.89
Second Quarter	\$ 52.90	\$ 44.95	\$ 49.39	\$ 40.62
Third Quarter	\$ 55.00	\$ 45.85	\$ 48.84	\$ 42.13
Fourth Quarter	\$ 55.75	\$ 44.50	\$ 50.25	\$ 38.00

Dividend History

We have paid the following dividends on our common stock (\$s in thousands except per share amounts):

	2017		2016	
	Per share	Dollars	Per share	Dollars
First Quarter	\$ 0.18	\$ 3,922	\$ 0.18	\$ 3,918
Second Quarter	0.18	3,927	0.18	3,917
Third Quarter	0.18	3,929	0.18	3,919
Fourth Quarter	0.18	3,933	0.18	3,919
Total	\$ 0.72	\$ 15,711	\$ 0.72	\$ 15,673

On January 2, 2018, the Company declared a dividend of \$0.18 per common share for stockholders of record on January 19, 2018. The dividend was paid from cash on hand on January 26, 2018 in an aggregate amount of \$3.9 million.

Pursuant to the New Credit Agreement, we may only declare quarterly or annual dividends if on the date of declaration, no event of default has occurred and no other event or condition has occurred that would constitute an event of default due to the payment of the dividend. No events of default under the New Credit Agreement have occurred to date.

Stock Performance Graph

The following graph compares the five year cumulative total return on our common stock with the comparable five year cumulative total returns of the NASDAQ Composite Index and Dow Jones Waste & Disposal Services Index for the period

29

Table of Contents

from the end of fiscal 2012 to the end of fiscal 2017. The stock price performance shown below is not necessarily indicative of future performance.

Comparison of Cumulative Total Stockholder Return(1) Among

US Ecology, Inc., NASDAQ Composite Index and

Dow Jones Waste & Disposal Services Index

Date	US Ecology, Inc.	Nasdaq Composite	Dow Jones US Waste & Disposal Services Index

(1) Total return assuming \$100 invested on December 31, 2012 and reinvestment of dividends on the day they were paid.

The performance graph above is being furnished solely to accompany this Annual Report on Form 10 K pursuant to Item 201(e) of Regulation S K, is not being filed for purposes of Section 18 of the Exchange Act, and is not to be incorporated by reference into any filing of the Company, whether made before or after the date hereof, regardless of any general incorporation language in such filing.

Securities Authorized for Issuance Under Equity Compensation Plans

Information with respect to compensation plans under which our equity securities are authorized for issuance is discussed in Item 12 of Part III of this Annual Report on Form 10 K.

Table of Contents

Issuer Purchases of Equity Securities

On June 1, 2016, the Company's Board of Directors authorized the repurchase of \$25.0 million of the Company's outstanding common stock. Repurchases may be made from time to time in the open market or through privately negotiated transactions. The timing of any repurchases will be based upon prevailing market conditions and other factors. The Company did not repurchase any shares of common stock under the repurchase program during the year ended December 31, 2017. The repurchase program will remain in effect until June 2, 2018, unless extended by our Board of Directors.

The following table summarizes the purchases of shares of our common stock during the year ended December 31, 2017:

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plan or Program	Approximate Dollar Value of Shares that May Yet be Purchased Under the Plans or Programs
January 1 to 31, 2017	—	\$ —	—	\$ 25,000,000
February 1 to 28, 2017	—	—	—	25,000,000
March 1 to 31, 2017 (1)	1,569	48.50	—	25,000,000
April 1 to 30, 2017	—	—	—	25,000,000
May 1 to 31, 2017	—	—	—	25,000,000
June 1 to 30, 2017 (1)	44	50.95	—	25,000,000
July 1 to 31, 2017	—	—	—	25,000,000

Stockholders' equity	\$ 324,077	\$ 280,024	\$ 256,135	\$ 251,337	\$ 231,538
Adjusted EBITDA (5)	\$ 113,810	\$ 112,786	\$ 125,450	\$ 108,976	\$ 71,186

(1) 2014 financial data reflects the acquisition of EQ on June 17, 2014.

(2) 2015 financial data reflects the divestiture of Allstate on November 1, 2015.

(3) 2017 financial data reflects a net income tax benefit of \$23.8 million, primarily as a result of the re-measurement of certain deferred tax assets and liabilities following the passage of the Tax Act.

(4) Calculated as current assets minus current liabilities.

(5) We define Adjusted EBITDA as net income before interest expense, interest income, income tax expense, depreciation, amortization, stock based compensation, accretion of closure and post closure liabilities, foreign currency gain/loss, non cash impairment charges, gain/loss on divestiture and other income/expense. See “Adjusted EBITDA” under Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations of this report for further discussion of Adjusted EBITDA and a reconciliation to the most directly comparable GAAP measure, net income.

ITEM 7. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

General

US Ecology, Inc. is a leading North American provider of environmental services to commercial and government entities. The Company addresses the complex waste management needs of its customers, offering treatment, disposal and recycling of hazardous, non hazardous and radioactive waste, as well as a wide range of complementary field and industrial services. US Ecology’s comprehensive knowledge of the waste business, its collection of waste management facilities and focus on safety, environmental compliance, and customer service enables us to effectively meet the needs of our customers and to build long lasting relationships.

We have fixed facilities and service centers operating in the United States, Canada and Mexico. Our fixed facilities include five RCRA subtitle C hazardous waste landfills and one LLRW landfill located near Beatty, Nevada; Richland, Washington; Robstown, Texas; Grand View, Idaho; Detroit, Michigan and Blainville, Québec, Canada. These facilities

Table of Contents

generate revenue from fees charged to treat and dispose of waste and from fees charged to perform various field and industrial services for our customers.

On November 1, 2015, we sold our Allstate Power Vac, Inc. (“Allstate”) subsidiary to a private investor group. See Note 5 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K for additional information.

Our operations are managed in two reportable segments reflecting our internal management reporting structure and nature of services offered as follows:

Environmental Services—This segment provides a broad range of hazardous material management services including transportation, recycling, treatment and disposal of hazardous and non hazardous waste at Company owned landfill, wastewater and other treatment facilities.

Field & Industrial Services—This segment provides packaging and collection of hazardous waste and total waste management solutions at customer sites and through our 10 day transfer facilities. Services include on site management, waste characterization, transportation and disposal of non hazardous and hazardous waste. This segment also provides specialty services such as high pressure cleaning, tank cleaning, decontamination, remediation, transportation, spill cleanup and emergency response and other services to commercial and industrial facilities and to government entities.

In order to provide insight into the underlying drivers of our waste volumes and related treatment and disposal (“T&D”) revenues, we evaluate period to period changes in our T&D revenue for our Environmental Services segment based on the industry of the waste generator, based on North American Industry Classification System (“NAICS”) codes.

The composition of the Environmental Services segment T&D revenues by waste generator industry for the years ended December 31, 2017 and 2016 were as follows:

	% of Treatment and Disposal Revenue(1) for the Years Ended December 31,	
Generator Industry	2017	2016
Chemical Manufacturing	17%	13%
Metal Manufacturing	16%	16%
Broker / TSDF	13%	15%
General Manufacturing	13%	14%
Refining	11%	11%
Government	6%	6%
Utilities	4%	4%
Mining, Exploration and Production	3%	3%
Waste Management & Remediation	3%	2%
Transportation	2%	3%
Other (2)	12%	13%

(1) Excludes all transportation service revenue

(2) Includes retail and wholesale trade, rate regulated, construction and other industries

We also categorize our Environmental Services T&D revenue as either “Base Business” or “Event Business” based on the underlying nature of the revenue source.

Table of Contents

Base Business consists of waste streams from ongoing industrial activities and tends to be reoccurring in nature. We define Event Business as non recurring projects that are expected to equal or exceed 1,000 tons, with Base Business defined as all other business not meeting the definition of Event Business. The duration of Event Business projects can last from a several-week cleanup of a contaminated site to a multiple year cleanup project.

During 2017, Base Business revenue growth was up 5% compared to 2016. Base Business revenue was approximately 78% of total 2017 T&D revenue, down from 82% in 2016. Our business is highly competitive and no assurance can be given that we will maintain these revenue levels or increase our market share.

A significant portion of our disposal revenue is attributable to discrete Event Business projects which vary widely in size, duration and unit pricing. For the year ended December 31, 2017, approximately 22% of our T&D revenue was derived from Event Business projects. The one time nature of Event Business, diverse spectrum of waste types received and widely varying unit pricing necessarily creates variability in revenue and earnings. This variability may be influenced by general and industry specific economic conditions, funding availability, changes in laws and regulations, government enforcement actions or court orders, public controversy, litigation, weather, commercial real estate, closed military bases and other project timing, government appropriation and funding cycles and other factors. The types and amounts of waste received from Base Business also vary from quarter to quarter.

This variability can also cause significant quarter to quarter and year to year differences in revenue, gross profit, gross margin, operating income and net income. While we pursue many projects months or years in advance of work performance, cleanup project opportunities routinely arise with little or no prior notice. These market dynamics are inherent to the waste disposal business and are factored into our projections and externally communicated business outlook statements. Our projections combine historical experience with identified sales pipeline opportunities, new or expanded service line projections and prevailing market conditions.

Depending on project specific customer needs and competitive economics, transportation services may be offered at or near our cost to help secure new business. For waste transported by rail from the eastern United States and other locations distant from our Grand View, Idaho and Robstown, Texas facilities, transportation related revenue can account for as much as 75% of total project revenue. While bundling transportation and disposal services reduces overall gross profit as a percentage of total revenue (“gross margin”), this value added service has allowed us to win multiple projects that management believes we could not have otherwise competed for successfully. Our Company owned fleet of gondola railcars, which is periodically supplemented with railcars obtained under operating leases, has reduced our transportation expenses by largely eliminating reliance on more costly short term rentals. These Company owned railcars also help us to win business during times of demand driven railcar scarcity.

The increased waste volumes resulting from projects won through this bundled service strategy further drive operating leverage benefits inherent to the disposal business, increasing profitability. While waste treatment and other variable costs are project specific, the incremental earnings contribution from large and small projects generally increases as overall disposal volumes increase. Based on past experience, management believes that maximizing operating income, net income and earnings per share is a higher priority than maintaining or increasing gross margin. We intend to continue aggressively bidding bundled transportation and disposal services based on this proven strategy.

We serve oil refineries, chemical production plants, steel mills, waste brokers/aggregators serving small manufacturers and other industrial customers that are generally affected by the prevailing economic conditions and credit environment. Adverse conditions may cause our customers as well as those they serve to curtail operations, resulting in lower waste production and/or delayed spending on off site waste shipments, maintenance, waste cleanup projects and other work. Factors that can impact general economic conditions and the level of spending by customers include, but are not limited to, consumer and industrial spending, increases in fuel and energy costs, conditions in the real estate and mortgage markets, labor and healthcare costs, access to credit, consumer confidence and other global

economic factors affecting spending behavior. Market forces may also induce customers to reduce or cease operations, declare bankruptcy, liquidate or relocate to other countries, any of which could adversely affect our business. To the extent business is either government funded or driven by government regulations or enforcement actions, we believe it is less susceptible to general economic conditions. Spending by government agencies may be reduced due to declining tax revenues resulting from a weak economy or changes in policy. Disbursement of funds appropriated by Congress may also be delayed for various reasons.

Table of Contents

Our results of operations have been affected by certain significant events during the past three fiscal years including, but not limited to:

2017 Events

Goodwill and Nonamortizing Intangible Asset Impairment Charges: Based on the results of the Company's annual assessment of goodwill and indefinite-lived intangible assets, during the fourth quarter we recorded a \$5.5 million goodwill impairment charge in our Resource Recovery reporting unit and a \$3.4 million impairment charge on the indefinite-lived intangible waste collection, recycling and resale permit associated with our Resource Recovery business. See Note 12 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10-K for additional information.

Tax Cuts and Jobs Act of 2017: On December 22, 2017, the Tax Act was signed into law making significant changes to the Internal Revenue Code. Changes include, but are not limited to, a corporate tax rate decrease from 35% to 21% effective for tax years beginning after December 31, 2017, the transition of U.S. international taxation from a worldwide tax system to a territorial system, and a one-time transition tax on the mandatory deemed repatriation of cumulative foreign earnings as of December 31, 2017. The Company calculated a provisional amount of the impact of the Tax Act in its year end income tax provision in accordance with its understanding of the Tax Act and guidance available as of the date of this Annual Report on Form 10-K and, as a result, recorded a \$23.8 million net income tax benefit in the fourth quarter of 2017, the period in which the legislation was enacted. See Note 16 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10-K for additional information.

Write-off of Deferred Financing Costs: In connection with the refinancing of the Company's outstanding debt, we wrote off certain unamortized deferred financing costs and original issue discount that were to be amortized to interest expense in future periods through a one-time charge of \$5.5 million to interest expense in the second quarter of 2017. See Note 15 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10-K for additional information.

2016 Events

Divestiture of Augusta, Georgia Facility: On April 5, 2016, we completed the divestiture of our Augusta, Georgia facility for cash proceeds of \$1.9 million. The Augusta, Georgia facility was reported as part of our Environmental Services segment. Sales, net income and total assets of the Augusta, Georgia facility are not material to our consolidated financial position or results of operations in any period presented. We recognized a \$1.9 million pre tax gain on the divestiture of the Augusta, Georgia facility, which is included in Other income (expense) in our consolidated statements of operations for the year ended December 31, 2016.

Acquisition of Environmental Services Inc.: On May 2, 2016, the Company acquired 100% of the outstanding shares of Environmental Services Inc., ("ESI"), an environmental services company based in Tilbury, Ontario, Canada. The total purchase price was \$4.9 million, net of cash acquired, and was funded with cash on hand. Revenues and total assets of ESI are not material to our consolidated financial position or results of operations. We recorded \$1.5 million of intangible assets and \$1.0 million of goodwill on the consolidated balance sheets as a result of the acquisition. Definite lived intangibles will be amortized over a weighted average life of approximately 14 years. Goodwill and indefinite lived intangibles are tested for impairment at least annually.

Acquisition of Vernon, California Facility: On October 1, 2016, the Company acquired the Vernon, California based RCRA Part B, liquids and solids waste treatment and storage facility of Evoqua Water Technologies LLC. The total purchase price was \$5.0 million and was funded with cash on hand. Revenues and total assets of the Vernon,

California facility are not material to our consolidated financial position or results of operations. We recorded \$3.2 million of intangible assets and \$354,000 of goodwill on the consolidated balance sheets as a result of the acquisition. Definite lived intangibles will be amortized over a weighted average life of approximately 20 years. Goodwill and indefinite lived intangibles are tested for impairment at least annually.

Table of Contents

2015 Events

Sale of Allstate Power Vac, Inc. (“Allstate”) and Goodwill Impairment: On November 1, 2015, we sold our Allstate subsidiary to a private investor group for cash proceeds of \$58.8 million. Allstate represented the majority of the industrial services business we acquired with the acquisition of EQ. As a result of this divestiture and management’s strategic review, we evaluated the recoverability of the assets associated with our industrial services business. Based on this analysis, we recorded a non-cash goodwill impairment charge of \$6.7 million, or \$0.31 per diluted share, in the second quarter of 2015. We recognized a pre-tax loss on the divestiture of Allstate, including transaction-related costs, of \$542,000 in the fourth quarter of 2015. In the second quarter of 2016, we received additional cash proceeds of \$827,000 in settlement of final post-closing adjustments and recognized an additional \$178,000 pre-tax gain. Gains and losses related to the sale of Allstate are included in Other income (expense) in our consolidated statements of operations. Cash proceeds from the transaction were used to repay debt. See Note 5 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10-K for additional information on the sale of Allstate.

Results of Operations

Our operating results and percentage of revenues for the years ended December 31, 2017, 2016 and 2015 were as follows:

\$s in thousands	Year Ended December 31,				2015	2017 vs. 2016		2016

Table of Contents

The primary financial measure used by management to assess segment performance is Adjusted EBITDA. Adjusted EBITDA is defined as net income before interest expense, interest income, income tax expense, depreciation, amortization, stock based compensation, accretion of closure and post closure liabilities, foreign currency gain/loss, non cash impairment charges, gain/loss on divestiture and other income/expense. The reconciliation of Net Income to Adjusted EBITDA for the years ended December 31, 2017, 2016 and 2015 is as follows:

\$s in thousands	Year Ended December 31,			2017 vs. 2016		2016 vs. 2015			
	2017	2016	2015	\$ Change	% Change	\$ Change	% Change		
Net Income	\$ 49,365	\$ 34,252	\$ 25,611	\$ 15,113	44	\$ 8,641	34		%
Income tax (benefit) expense	(6,395)	21,049	21,244	(27,444)	(130)	(195)	(1)		%
Interest expense	18,157	17,317	23,370	840	5	(6,053)	(26)		%
Interest income	(62)	(96)	(65)	34	(35)	(31)	48		%
Foreign currency (gain) loss	(516)	138	2,196	(654)	(474)	(2,058)	(94)		%
Loss (gain) on divestiture	—	(2,034)	542	2,034	(100)	(2,576)	(475)		%
Other income	(791)	(597)	(1,267)	(194)	32	670	(53)		%
Impairment charges	8,903	—	6,700	8,903	n/m	(6,700)	(100)		%
Depreciation and amortization of plant and equipment	28,302	25,304	27,931	2,998	12	(2,627)	(9)		%
Amortization of intangibles	9,888	10,575	12,307	(687)	(6)	(1,732)	(14)		%
Stock-based compensation	3,933	2,925	2,297	1,008	34	628	27		%
Accretion and non-cash adjustment of closure & post-closure liabilities	3,026	3,953	4,584	(927)	(23)	(631)	(14)		%
Adjusted EBITDA	\$ 113,810	\$ 112,786	\$ 125,450	\$ 1,024	1	\$ (12,664)	(10)		%

Adjusted EBITDA is a complement to results provided in accordance with accounting principles generally accepted in the United States (“GAAP”) and we believe that such information provides additional useful information to analysts, stockholders and other users to understand the Company’s operating performance. Since Adjusted EBITDA is not a measurement determined in accordance with GAAP and is thus susceptible to varying calculations, Adjusted EBITDA as presented may not be comparable to other similarly titled measures of other companies. Items excluded from

Adjusted EBITDA are significant components in understanding and assessing our financial performance. Adjusted EBITDA should not be considered in isolation or as an alternative to, or substitute for, net income, cash flows generated by operations, investing or financing activities, or other financial statement data presented in the consolidated financial statements as indicators of financial performance or liquidity.

Adjusted EBITDA has limitations as an analytical tool and should not be considered in isolation or a substitute for analyzing our results as reported under GAAP. Some of the limitations are:

- Adjusted EBITDA does not reflect changes in, or cash requirements for, our working capital needs;
- Adjusted EBITDA does not reflect our interest expense, or the requirements necessary to service interest or principal payments on our debt;
- Adjusted EBITDA does not reflect our income tax expenses or the cash requirements to pay our taxes;
- Adjusted EBITDA does not reflect our cash expenditures or future requirements for capital expenditures or contractual commitments; and
- Although depreciation and amortization charges are non-cash charges, the assets being depreciated and amortized will often have to be replaced in the future, and Adjusted EBITDA does not reflect any cash requirements for such replacements.

Table of Contents

2017 Compared to 2016

Revenue

Total revenue increased 6% to \$504.0 million in 2017, compared with \$477.7 million in 2016.

Environmental Services

Environmental Services segment revenue increased 8% to \$366.3 million in 2017, compared to \$337.8 million in 2016. T&D revenue increased 8% in 2017, primarily as a result of a 23% increase in project based Event Business revenue and a 5% increase in Base Business revenue. Transportation and logistics service revenue increased 8% in 2017 compared to 2016, reflecting more Event Business projects utilizing the Company's transportation and logistics services. Tons of waste disposed of or processed increased 7% in 2017 compared to 2016.

T&D revenue from recurring Base Business waste generators increased 5% in 2017 compared to 2016 and comprised 78% of total T&D revenue. During 2017, increases in Base Business T&D revenue from the chemical manufacturing, refining, general manufacturing, and "Other" industry groups were partially offset by decreases in T&D revenue from Base Business in the broker/TSDf industry group.

T&D revenue from Event Business waste generators increased 23% in 2017 compared to 2016 and comprised 22% of total T&D revenue. The increase in Event Business T&D revenue compared to the prior year primarily reflects higher T&D revenue from the chemical manufacturing, metal manufacturing, government and "Other" industry groups, partially offset by lower T&D revenue from the general manufacturing industry group. The increase in revenue from the chemical manufacturing industry group is primarily attributable to a large East Coast remedial cleanup project. The decrease in revenue from the general manufacturing industry group is primarily attributable to lower Event Business volume.

The following table summarizes combined Base Business and Event Business T&D revenue growth, within the Environmental Services segment, by waste generator industry for 2017 compared to 2016:

	T&D Revenue Growth 2017 vs. 2016
Chemical Manufacturing	37%
Waste Management & Remediation	23%
Government	14%
Mining and E&P	12%
Refining	11%
Other	9%
Metal Manufacturing	8%
General Manufacturing	-2%
Transportation	-6%
Utilities	-7%
Broker / TSDf	-8%

Field & Industrial Services

Field & Industrial Services segment revenue decreased 2% to \$137.7 million in 2017 compared with \$139.9 million in 2016. The decrease in Field & Industrial Services segment revenue is primarily attributable to the expiration of a contract that was not renewed or replaced and softer overall market conditions for industrial and remediation services.

Gross Profit

Total gross profit increased 4% to \$153.1 million in 2017, up from \$147.6 million in 2016. Total gross margin was 30% for 2017 compared with 31% for 2016.

Table of Contents

Environmental Services

Environmental Services segment gross profit increased 6% to \$135.0 million in 2017, up from \$126.8 million in 2016. This increase primarily reflects higher T&D volumes in 2017 compared to 2016. Total segment gross margin was 37% for 2017 compared with 38% for 2016. T&D gross margin was 40% for 2017 compared with 42% for 2016. The decrease in T&D gross margin is primarily attributable to the impact of the temporary closure of one of our treatment facilities due to wind damage and incremental costs associated with the hurricanes in the Gulf Coast and Florida that impacted our operations in 2017.

Field & Industrial Services

Field & Industrial Services segment gross profit decreased 13% to \$18.2 million in 2017, down from \$20.8 million in 2016. Total segment gross margin was 13% for 2017 compared with 15% for 2016. The decrease in segment gross margin is attributable to lower route density in our small quantity generation services due to a contract that was not renewed in late 2016 and a less favorable service mix for our industrial and remediation services in 2017 compared to 2016.

Selling, General and Administrative Expenses (“SG&A”)

Total SG&A increased to \$84.5 million, or 17% of total revenue, in 2017 compared with \$77.6 million, or 16% of total revenue, in 2016.

Environmental Services

Environmental Services segment SG&A increased 13% to \$24.2 million, or 7% of segment revenue, in 2017 compared with \$21.4 million, or 6% of segment revenue, in 2016, primarily reflecting higher labor and incentive compensation costs, higher property tax expenses and lower gains on sale of assets, partially offset by lower bad debt expense and higher insurance proceeds in 2017 compared to 2016.

Field & Industrial Services

Field & Industrial Services segment SG&A decreased 8% to \$9.3 million, or 7% of segment revenue, in 2017 compared with \$10.1 million, or 7% of segment revenue, in 2016. The decrease in segment SG&A primarily reflects lower bad debt expense and higher insurance proceeds, partially offset by higher labor and incentive compensation costs in 2017 compared to 2016.

Corporate

Corporate SG&A was \$51.0 million, or 10% of total revenue, in 2017 compared with \$46.0 million, or 10% of total revenue, in 2016, primarily reflecting higher labor and incentive compensation costs in 2017 compared to 2016.

Components of Adjusted EBITDA

Income tax expense

Our effective income tax rate for 2017 was -14.9% compared to 38.1% in 2016. The decrease was primarily the result of the impact of the Tax Act, enacted on December 22, 2017 by the U.S. government. Among other provisions, the Tax Act reduces the federal corporate tax rate to 21% from the existing maximum rate of 35%, effective for tax years beginning after December 31, 2017, and imposes a deemed repatriation tax on previously untaxed accumulated

earnings and profits of foreign subsidiaries. We re-measured our net deferred tax assets and liabilities and recorded a provisional benefit of \$25.2 million to our income tax expense. We also recorded a provisional charge of \$1.4 million to our income tax expense for the deemed repatriation transition tax. While we are able to make reasonable estimates of the impact of the reduction in the corporate income tax rate and the deemed repatriation transition tax, the final impact of the Tax Act may differ from these estimates, due to, among other things, changes in our interpretations and assumptions, additional guidance that may be issued by the Internal Revenue Service (“IRS”), and actions we may take. We are continuing to gather additional

Table of Contents

information to determine the final impact. The decrease in the effective income tax rate was also attributable to a higher proportion of earnings from our Canadian operations in 2017 which are taxed at a lower corporate tax rate, partially offset by non-recurring non-deductible impairment charges as well as a higher effective state tax rate driven by changes in apportionment of income between the various states in which we operate. As of December 31, 2017, we have exhausted all of our federal net operating loss carry forwards (“NOLs”) and have approximately \$8.9 million in state and local NOLs for which we maintain a substantial valuation allowance. We maintain a valuation allowance on state and local NOLs when we no longer do business within a state or locality or determine it is unlikely that we will utilize these NOLs in the future. We consider it more likely than not that we will not utilize the majority of these NOLs in the future.

Interest expense

Interest expense was \$18.2 million in 2017 compared with \$17.3 million in 2016. The Company wrote off certain unamortized deferred financing costs and original issue discount associated with the Former Credit Agreement that were to be amortized to interest expense in future periods through a one-time non-cash charge of \$5.5 million to interest expense in the second quarter of 2017. This increase is partially offset by a lower effective interest rate under the New Credit Agreement compared to the Former Credit Agreement and reduced debt levels in 2017 compared to 2016.

Foreign currency gain (loss)

We recognized a \$516,000 non-cash foreign currency gain in 2017 compared with a \$138,000 non-cash foreign currency loss in 2016. Foreign currency gains and losses reflect changes in business activity conducted in a currency other than the USD, our functional currency. Our Canadian subsidiaries’ facilities are located in Blainville, Québec and Tilbury, Ontario, Canada and use the Canadian dollar (“CAD”) as their functional currency. Additionally, we established intercompany loans between our Canadian subsidiaries, whose functional currency is the CAD, and our parent company, US Ecology, as part of a tax and treasury management strategy allowing for repayment of third-party bank debt. These intercompany loans are payable by our Canadian subsidiaries to US Ecology in CAD requiring us to revalue the outstanding loan balance through our statements of operations based on USD/CAD currency movements from period to period. At December 31, 2017, we had \$21.4 million of intercompany loans subject to currency revaluation.

Gain on divestiture

Other income in 2016 includes approximately \$2.0 million related to the gain on sale of the Augusta, Georgia facility in April 2016 and final closing adjustments on the Allstate divestiture.

Depreciation and amortization of plant and equipment

Depreciation and amortization expense increased to \$28.3 million in 2017 compared with \$25.3 million in 2016, primarily reflecting additional depreciation expense on assets placed in service in 2017.

Amortization of intangibles

Intangible assets amortization expense was \$9.9 million in 2017 compared with \$10.6 million in 2016.

Stock-based compensation

Stock based compensation expense increased 34% to \$3.9 million in 2017, compared with \$2.9 million 2016 as a result of an increase in equity based awards granted to employees.

Accretion and non cash adjustment of closure and post closure liabilities

Accretion and non cash adjustment of closure and post closure liabilities decreased to \$3.0 million in 2017 compared with \$4.0 million in 2016, primarily reflecting non-cash adjustments to post-closure liabilities recorded in 2017 due to changes in cost estimates associated with closed sites.

Table of Contents

Impairment charges

Based on the results of our annual assessment of goodwill and indefinite-lived intangible assets, we recorded a \$5.5 million goodwill impairment charge in our Resource Recovery reporting unit and a \$3.4 million impairment charge on the indefinite-lived intangible waste collection, recycling and resale permit of our Resource Recovery business. See Note 12 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K for additional information.

2016 Compared to 2015

Revenue

Total revenue decreased 15% to \$477.7 million in 2016, compared with \$563.1 million in 2015.

Environmental Services

Environmental Services segment revenue decreased 6% to \$337.8 million in 2016, compared to \$359.0 million in 2015. T&D revenue decreased 5% in 2016, primarily as a result of a 30% decrease in project based Event Business. Transportation and logistics service revenue decreased 8% in 2016 compared to 2015, reflecting fewer Event Business projects utilizing the Company’s transportation and logistics services. Tons of waste disposed of or processed decreased 14% in 2016 compared to 2015.

T&D revenue from recurring Base Business waste generators increased 2% in 2016 compared to 2015 and comprised 82% of total T&D revenue. During 2016, increases in Base Business T&D revenue from the refining, “Other”, utilities and general manufacturing industry groups were partially offset by decreases in T&D revenue from Base Business in the chemical manufacturing and broker/TSDf industry groups.

T&D revenue from Event Business waste generators decreased 30% in 2016 compared to 2015 and comprised 18% of total T&D revenue. The decrease in Event Business T&D revenue compared to the prior year primarily reflects lower T&D revenue from the chemical manufacturing, refining and government industry groups, partially offset by higher T&D revenue from the general manufacturing and “Other” industry groups. The decrease in revenue from the chemical manufacturing industry group is primarily attributable to the completion of a large East Coast remedial cleanup project in the third quarter of 2015 and the completion of a nuclear fuels fabrication plant decommissioning in the first quarter of 2016. The decrease in revenue from the refining and government industry groups is primarily attributable to lower Event Business volumes.

The following table summarizes combined Base Business and Event Business T&D revenue growth, within the Environmental Services segment, by waste generator industry for 2016 compared to 2015:

	T&D Revenue Growth 2016 vs. 2015
Other	15%
General Manufacturing	14%
Waste Management & Remediation	10%
Utilities	9%
Refining	0%
Metal Manufacturing	-3%
Broker / TSDf	-3%

Edgar Filing: US ECOLOGY, INC. - Form 10-K

Mining and E&P	-4%
Transportation	-5%
Government	-28%
Chemical Manufacturing	-35%

Table of Contents

Field & Industrial Services

Field & Industrial Services segment revenue decreased 31% to \$139.9 million in 2016 compared with \$204.0 million in 2015. The decrease is primarily attributable to the divested Allstate business which contributed segment revenue of \$59.1 million for our period of ownership in 2015.

Gross Profit

Total gross profit decreased 14% to \$147.6 million in 2016, down from \$171.4 million in 2015. Total gross margin was 31% for 2016 compared with 30% for 2015.

Environmental Services

Environmental Services segment gross profit decreased 8% to \$126.8 million in 2016, down from \$137.6 million in 2015. This decrease primarily reflects lower T&D volumes in 2016 compared to 2015. Total segment gross margin was 38% for both 2016 and 2015. T&D gross margin was 42% for 2016 compared with 43% for 2015.

Field & Industrial Services

Field & Industrial Services segment gross profit decreased 38% to \$20.8 million in 2016, down from \$33.8 million in 2015. Total segment gross margin was 15% for 2016 compared with 17% for 2015. The divested Allstate business contributed segment gross profit of \$12.4 million for our period of ownership in 2015.

Selling, General and Administrative Expenses (“SG&A”)

Total SG&A decreased to \$77.6 million, or 16% of total revenue, in 2016 compared with \$93.1 million, or 17% of total revenue, in 2015.

Environmental Services

Environmental Services segment SG&A decreased 6% to \$21.4 million, or 6% of segment revenue, in 2016 compared with \$22.8 million, or 6% of segment revenue, in 2015, primarily reflecting higher gains on sales of assets in 2016 compared to 2015.

Field & Industrial Services

Field & Industrial Services segment SG&A decreased 54% to \$10.1 million, or 7% of segment revenue, in 2016 compared with \$22.0 million, or 11% of segment revenue, in 2015. The divested Allstate business contributed segment SG&A of \$10.9 million for our period of ownership in 2015. The remaining decrease in segment SG&A primarily reflects lower employee labor costs in 2016 compared to 2015.

Corporate

Corporate SG&A was \$46.0 million, or 10% of total revenue, in 2016 compared with \$48.4 million, or 9% of total revenue, in 2015, primarily reflecting lower business development expenses and lower professional services expenses in 2016 compared to 2015.

Components of Adjusted EBITDA

Income tax expense

Our effective income tax rate for 2016 was 38.1% compared to 45.3% in 2015. The decrease reflects nonrecurring non-deductible goodwill impairment charges incurred in 2015, a nondeductible loss on the sale of the Allstate business recorded

42

Table of Contents

during 2015 and a decrease in our U.S. effective tax rate, driven by a lower overall effective state tax rate. The lower effective state tax rate was driven by changes in apportionment of income and deferred taxes between the various states in which we operate. The decrease in the effective tax rate was partially offset by a lower proportion of earnings from our Canadian operations in 2016, which are taxed at a lower corporate tax rate. As of December 31, 2016, we had approximately \$17,000 in federal NOLs acquired from EQ. As of December 31, 2016, we had approximately \$12.7 million in state and local NOLs for which we maintain a substantial valuation allowance. We maintain a valuation allowance on state and local NOLs when we no longer do business within a state or locality or determine it is unlikely that we will utilize these NOLs in the future. We consider it more likely than not that we will not utilize the majority of these NOLs in the future.

Interest expense

Interest expense was \$17.3 million in 2016 compared with \$23.4 million in 2015. The decrease is primarily due to \$291,000 of incremental non-cash amortization of deferred financing fees associated with debt principal payments in 2016 compared with \$2.4 million of incremental amortization in 2015. The remaining decrease is attributable to lower debt levels in 2016 compared with 2015.

Foreign currency gain (loss)

We recognized a \$138,000 non-cash foreign currency loss in 2016 compared with a \$2.2 million non-cash foreign currency loss in 2015. Foreign currency gains and losses reflect changes in business activity conducted in a currency other than the USD, our functional currency. Our Canadian subsidiaries' facilities are located in Blainville, Québec and Tilbury, Ontario, Canada and use the Canadian dollar ("CAD") as their functional currency. Additionally, we established intercompany loans between our Canadian subsidiaries, whose functional currency is the CAD, and our parent company, US Ecology, as part of a tax and treasury management strategy allowing for repayment of third-party bank debt. These intercompany loans are payable by our Canadian subsidiaries to US Ecology in CAD requiring us to revalue the outstanding loan balance through our statements of operations based on USD/CAD currency movements from period to period. At December 31, 2016, we had \$20.8 million of intercompany loans subject to currency revaluation.

Gain on divestiture

Other income in 2016 includes approximately \$2.0 million related to the gain on sale of the Augusta, Georgia facility in April 2016 and final closing adjustments on the Allstate divestiture.

Depreciation and amortization of plant and equipment

Depreciation and amortization expense was \$25.3 million in 2016 compared with \$27.9 million in 2015. The divested Allstate business contributed depreciation and amortization expense of \$2.2 million for our period of ownership in 2015.

Amortization of intangibles

Intangible assets amortization expense was \$10.6 million in 2016 compared with \$12.3 million in 2015. The divested Allstate business contributed intangible assets amortization expense of \$1.4 million for our period of ownership in 2015.

Stock-based compensation

Stock based compensation expense increased 27% to \$2.9 million in 2016, compared with \$2.3 million 2015 as a result of an increase in equity based awards granted to employees.

Accretion and non cash adjustment of closure and post closure liabilities

Accretion and non cash adjustment of closure and post closure liabilities was \$4.0 million in 2016 compared with \$4.6 million in 2015.

43

Table of Contents

Impairment charges

On August 4, 2015, we entered into a definitive agreement to sell Allstate to a private investor group. Allstate represented the majority of the industrial services business we acquired with the acquisition of EQ. As a result of this agreement and management's strategic review, we evaluated the recoverability of the assets associated with our industrial services business. Based on this analysis, we recorded a non-cash goodwill impairment charge of \$6.7 million in the second quarter of 2015. See Note 5 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10-K for additional information on the sale of Allstate.

Liquidity and Capital Resources

Our primary sources of liquidity are cash and cash equivalents, cash generated from operations and borrowings under the new senior secured credit agreement (the "New Credit Agreement"). At December 31, 2017, we had \$27.0 million in cash and cash equivalents immediately available and \$216.7 million of borrowing capacity available under the New Credit Agreement. We assess our liquidity in terms of our ability to generate cash to fund our operating, investing and financing activities. Our primary ongoing cash requirements are funding operations, capital expenditures, paying principal and interest on our long-term debt, and paying declared dividends pursuant to our dividend policy. We believe future operating cash flows will be sufficient to meet our future operating, investing and dividend cash needs for the foreseeable future. Furthermore, existing cash balances and availability of additional borrowings under the New Credit Agreement provide additional sources of liquidity should they be required.

Operating Activities. In 2017, net cash provided by operating activities was \$81.0 million. This primarily reflects net income of \$49.4 million, non-cash depreciation, amortization and accretion of \$41.2 million, non-cash impairment charges of \$8.9 million, amortization and write-off of debt issuance costs of \$6.0 million, a decrease in income taxes receivable of \$4.1 million, share-based compensation expense of \$3.9 million, an increase in income taxes payable of \$3.9 and an increase in accrued salaries and benefits of \$3.4 million, partially offset by a decrease in deferred income taxes of \$25.3 million, an increase in accounts receivable of \$13.9 million, and a decrease in closure and post-closure obligations of \$1.8 million. Impacts on net income are due to the factors discussed above under "Results of Operations." The increase in receivables is primarily attributable to the timing of customer payments. Changes in income taxes receivable and payable are primarily attributable to the timing of income tax payments. Changes in deferred income taxes are primarily attributable to the re-measurement of our deferred tax assets and liabilities based on the provisions of the Tax Act.

Days sales outstanding were 77 days as of December 31, 2017, compared to 73 days as of December 31, 2016.

In 2016, net cash provided by operating activities was \$74.6 million. This primarily reflects net income of \$34.3 million, non-cash depreciation, amortization and accretion of \$39.8 million, a decrease in accounts receivable of \$10.9 million, share-based compensation expense of \$2.9 million, non-cash amortization of debt issuance costs of \$2.0 million, and a decrease in other assets of \$1.2 million, partially offset by a decrease in accounts payable and accrued liabilities of \$7.7 million, a decrease in deferred income taxes of \$2.7 million, the gain recognized on the divestiture of the Augusta, Georgia facility in April 2016, final closing adjustments on the Allstate divestiture of \$2.0 million, and an increase in income taxes receivable of \$2.0 million. Impacts on net income are due to the factors discussed above under "Results of Operations." The decrease in receivables is primarily attributable to the timing of customer payments. Changes in income taxes receivable and payable are primarily attributable to the timing of income tax payments.

In 2015, net cash provided by operating activities was \$71.5 million. This primarily reflects net income of \$25.6 million, non cash depreciation, amortization and accretion of \$44.8 million, non cash impairment charges of \$6.7 million, a decrease in income taxes receivable of \$4.8 million, non cash amortization of debt issuance costs of \$4.4 million, unrealized foreign currency losses of \$3.3 million, share based compensation expense of \$2.3 million and a decrease in accounts receivable of \$1.6 million, partially offset by a decrease in accounts payable and accrued liabilities of \$6.5 million, a decrease in closure and post closure obligations of \$5.7 million, a decrease in deferred revenue of \$4.4 million, a decrease in income taxes payable of \$3.9 million and a decrease in deferred income taxes of \$2.7 million. Impacts on net income are due to the factors discussed above under "Results of Operations." The decrease in receivables and deferred revenue is primarily attributable to the timing of the treatment and disposal of waste associated with a significant East Coast remedial cleanup project. The changes in income taxes receivable and payable are primarily

Table of Contents

attributable to the timing of income tax payments. The decrease in closure and post closure obligations is primarily attributable to payments made for closure and post closure activities primarily at our closed landfills.

Investing Activities. In 2017, net cash used in investing activities was \$35.3 million, primarily related to capital expenditures. Significant capital projects included construction of additional disposal capacity at our Beatty, Nevada and Blainville, Québec, Canada locations and equipment purchases and infrastructure upgrades at our corporate and operating facilities.

In 2016, net cash used in investing activities was \$42.0 million, primarily related to capital expenditures of \$35.7 million, the purchase of the Vernon, California based RCRA Part B, liquids and solids waste treatment and storage facility of Evoqua Water Technologies LLC for \$5.0 million and the purchase of Environmental Services Inc., (“ESI”), for \$4.9 million, net of cash acquired, partially offset by proceeds from the divestiture of our Augusta, Georgia facility for \$2.7 million, net of cash divested. Significant capital projects included construction of additional disposal capacity at our Blainville, Québec, Canada, Beatty, Nevada and Robstown, Texas facilities and equipment purchases and infrastructure upgrades at our corporate and operating facilities.

In 2015, net cash provided by investing activities was \$20.3 million, primarily related to the divestiture of Allstate for \$58.7 million, net of cash divested, partially offset by capital expenditures of \$39.4 million. Significant capital projects included construction of additional disposal capacity at our Blainville, Québec, Canada and Robstown, Texas locations and equipment purchases and infrastructure upgrades at all of our corporate and operating facilities.

Financing Activities. During 2017, net cash used in financing activities was \$26.3 million, consisting primarily of \$283.0 million of repayment of the Company’s long-term debt under the Former Credit Agreement, \$281.0 million of initial proceeds from the borrowing of long-term debt under the New Credit Agreement, \$4.0 million of subsequent repayments of long-term debt under the New Credit Agreement, \$15.7 million of dividend payments to our stockholders, \$3.0 million of deferred financing costs associated with the New Credit Agreement and net payment activity on the Company’s short-term borrowings of \$2.2 million.

During 2016, net cash used in financing activities was \$31.6 million, consisting primarily of \$18.0 million of payments on our Term Loan and \$15.7 million of dividend payments to our stockholders, partially offset by \$2.2 million of net proceeds on our Revolving Credit Facility to fund working capital requirements.

During 2015, net cash used in financing activities was \$108.4 million, consisting primarily of \$94.6 million of payments on our Term Loan and \$15.6 million of dividend payments to our stockholders.

Credit Facility

On April 18, 2017, the Company entered into the New Credit Agreement with Wells Fargo Bank, National Association, as administrative agent for the lenders, swingline lender and issuing lender, and Bank of America, N.A., as an issuing lender, which provides for a \$500.0 million, five-year revolving credit facility (the “Revolving Credit Facility”), including a \$75.0 million sublimit for the issuance of standby letters of credit and a \$25.0 million sublimit for the issuance of swingline loans used to fund short-term working capital requirements. The New Credit Agreement also contains an accordion feature whereby the Company may request up to \$200.0 million of additional funds through an increase to the Revolving Credit Facility, through incremental term loans, or some combination thereof. Proceeds from the Revolving Credit Facility are restricted solely for working capital and other general corporate purposes (including acquisitions and capital expenditures). Under the Revolving Credit Facility, revolving credit loans are available based on a base rate (as defined in the New Credit Agreement) or LIBOR, at the Company’s option, plus

an applicable margin which is determined according to a pricing grid under which the interest rate decreases or increases based on our ratio of funded debt to consolidated earnings before interest, taxes, depreciation and amortization (as defined in the New Credit Agreement). The Company wrote off certain unamortized deferred financing costs and original issue discount associated with the Former Credit Agreement that were to be amortized to interest expense in future periods through a one-time charge of \$5.5 million to interest expense in the second quarter of 2017.

At December 31, 2017, the effective interest rate on the Revolving Credit Facility, including the impact of our interest rate

45

Table of Contents

swap, was 3.39%. Interest only payments are due either quarterly or on the last day of any interest period, as applicable. In October 2014, the Company entered into an interest rate swap agreement, effectively fixing the interest rate on \$190.0 million, or 69%, of the Revolving Credit Facility borrowings as of December 31, 2017. The interest rate swap agreement continued to be effective following the termination of the Former Credit Agreement.

The Company is required to pay a commitment fee ranging from 0.175% to 0.35% on the average daily unused portion of the Revolving Credit Facility, with such commitment fee to be reduced based upon the Company's total net leverage ratio (as defined in the New Credit Agreement). The maximum letter of credit capacity under the Revolving Credit Facility is \$75.0 million and the New Credit Agreement provides for a letter of credit fee equal to the applicable margin for LIBOR loans under the Revolving Credit Facility. At December 31, 2017, there were \$277.0 million of borrowings outstanding on the Revolving Credit Facility. These borrowings are due on the revolving credit maturity date (as defined in the New Credit Agreement) and presented as long-term debt in the consolidated balance sheets.

The Company has entered into a sweep arrangement whereby day-to-day cash requirements in excess of available cash balances are advanced to the Company on an as-needed basis with repayments of these advances automatically made from subsequent deposits to our cash operating accounts (the "Sweep Arrangement"). Total advances outstanding under the Sweep Arrangement are subject to the \$25.0 million swingline loan sublimit under the Revolving Credit Facility. The Company's revolving credit loans outstanding under the Revolving Credit Facility are not subject to repayment through the Sweep Arrangement. As of December 31, 2017, there were no amounts outstanding subject to the Sweep Arrangement.

As of December 31, 2017, the availability under the Revolving Credit Facility was \$216.7 million with \$6.3 million of the Revolving Credit Facility issued in the form of standby letters of credit utilized as collateral for closure and post-closure financial assurance and other assurance obligations.

See Note 15 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10 K for additional information on the Company's debt.

Contractual Obligations and Guarantees

Contractual Obligations

US Ecology's contractual obligations at December 31, 2017 become due as follows:

\$s in thousands	Payments Due by Period				
	Total	2018	2019-2020	2021-2022	Thereafter
Closure and post-closure obligations(1)	\$ 308,455	\$ 2,250	\$ 13,863	\$ 11,261	\$ 281,081
Operating lease commitments	14,654	5,046	5,275	2,407	1,926
Credit agreement obligations(2)	277,000	—	—	277,000	—

Edgar Filing: US ECOLOGY, INC. - Form 10-K

Interest expense(3)	39,258	9,563	18,763	10,932	—
Total contractual obligations	\$ 639,367	\$ 16,859	\$ 37,901	\$ 301,600	\$ 283,007

- (1) For the purposes of the table above, closure and post closure obligations are shown on an undiscounted basis and inflated using an estimated annual inflation rate of 2.6%. Cash payments for closure and post closure obligation extend to the year 2105.
- (2) At December 31, 2017, there were \$277.0 million of revolving credit loans outstanding on the Revolving Credit Facility. These revolving credit loans are due upon the earliest to occur of (a) April 18, 2022 (or, with respect to any lender, such later date as requested by us and accepted by such lender), (b) the date of termination of the entire revolving credit commitment (as defined in the New Credit Agreement) by us, and (c) the date of termination of the revolving credit commitment.
- (3) Interest expense has been calculated using the effective interest rate of 3.06% in effect at December 31, 2017 on the unhedged variable rate portion of the Revolving Credit Facility borrowings and 3.67% on the fixed rate hedged portion

Table of Contents

of the Revolving Credit Facility borrowings. The interest expense calculation reflects assumed payments on the Revolving Credit Facility borrowings consistent with the disclosures in footnote (2) above.

Guarantees

We enter into a wide range of indemnification arrangements, guarantees and assurances in the ordinary course of business and have evaluated agreements that contain guarantees and indemnification clauses. These include tort indemnities, tax indemnities, indemnities against third party claims arising out of arrangements to provide services to us and indemnities related to the sale of our securities. We also indemnify individuals made party to any suit or proceeding if that individual was acting as an officer or director of US Ecology or was serving at the request of US Ecology or any of its subsidiaries during their tenure as a director or officer. We also provide guarantees and indemnifications for the benefit of our wholly owned subsidiaries to satisfy performance obligations, including closure and post closure financial assurances. It is difficult to quantify the maximum potential liability under these indemnification arrangements; however, we are not currently aware of any material liabilities to the Company or any of its subsidiaries arising from these arrangements.

Environmental Matters

We maintain funded trusts agreements, surety bonds and insurance policies for future closure and post closure obligations at both current and formerly operated disposal facilities. These funded trust agreements, surety bonds and insurance policies are based on management estimates of future closure and post closure monitoring using engineering evaluations and interpretations of regulatory requirements which are periodically updated. Accounting for closure and post closure costs includes final disposal cell capping and revegetation, soil and groundwater monitoring and routine maintenance and surveillance required after a site is closed.

We estimate that our undiscounted future closure and post closure costs for all facilities was approximately \$308.5 million at December 31, 2017, with a median payment year of 2061. Our future closure and post closure estimates are our best estimate of current costs and are updated periodically to reflect current technology, cost of materials and services, applicable laws, regulations, permit conditions or orders and other factors. These current costs are adjusted for anticipated annual inflation, which we assumed to be 2.6% as of December 31, 2017. These future closure and post closure estimates are discounted to their present value for financial reporting purposes using our credit adjusted risk free interest rate, which approximates our incremental long term borrowing rate in effect at the time the obligation is established or when there are upward revisions to our estimated closure and post closure costs. At December 31, 2017, our weighted average credit adjusted risk free interest rate was 5.9%. For financial reporting purposes, our recorded closure and post closure obligations were \$76.1 million and \$75.1 million as of December 31, 2017 and 2016, respectively.

Through December 31, 2017, we have met our financial assurance requirements through insurance, surety bonds, standby letters of credit and self funded restricted trusts.

U.S. Operating and Non Operating Facilities

We cover our closure and post closure obligations for our U.S. operating facilities through the use of third party insurance policies, surety bonds and standby letters of credit. Insurance policies covering our closure and post closure obligations expire in April 2018 and December 2018. Our total policy limits are approximately \$87.4 million. At December 31, 2017 our trust accounts had \$5.8 million for our closure and post closure obligations and are identified as Restricted cash and investments on our consolidated balance sheets.

All closure and post closure funding obligations for our Beatty, Nevada and Richland, Washington facilities revert to the respective State. Volume based fees are collected from our customers and remitted to state controlled trust funds to

cover the estimated cost of closure and post closure obligations.

Stablex

We use commercial surety bonds to cover our closure obligations for our Stablex facility located in Blainville, Québec, Canada. Our lease agreement with the Province of Québec requires that the surety bond be maintained for 25 years after

47

Table of Contents

the lease expires in 2023. At December 31, 2017 we had \$752,000 in commercial surety bonds dedicated for closure obligations. These bonds were renewed in November and December 2017 and expire in November and December 2018. Post closure funding obligations for the Stablex landfill revert back to the Province of Québec through a dedicated trust account that is funded based on a per metric ton disposed fee by Stablex.

We expect to renew insurance policies and commercial surety bonds in the future. If we are unable to obtain adequate closure, post closure or environmental liability insurance and/or commercial surety bonds in future years, any partial or completely uninsured claim against us, if successful and of sufficient magnitude, could have a material adverse effect on our financial condition, results of operations or cash flows. Additionally, continued access to casualty and pollution legal liability insurance with sufficient limits, at acceptable terms, is important to obtaining new business. Failure to maintain adequate financial assurance could also result in regulatory action including early closure of facilities. While we believe we will be able to maintain the requisite financial assurance policies at a reasonable cost, premium and collateral requirements may materially increase.

Operation of disposal facilities creates operational, closure and post closure obligations that could result in unplanned monitoring and corrective action costs. We cannot predict the likelihood or effect of all such costs, new laws or regulations, litigation or other future events affecting our facilities. We do not believe that continuing to satisfy our environmental obligations will have a material adverse effect on our financial condition or results of operations.

Seasonal Effects

Seasonal fluctuations due to weather and budgetary cycles can influence the timing of customer spending for our services. Typically, in the first quarter of each calendar year there is less demand for our services due to reduced construction and business activities related to weather while we experience improvement in our second and third quarters of each calendar year as weather conditions and other business activity improves.

Critical Accounting Policies

Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with GAAP. The preparation of these financial statements require us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses and related disclosure of contingent assets and liabilities. On an ongoing basis, we evaluate our estimates included in our critical accounting policies discussed below and those accounting policies and use of estimates discussed in Notes 2 and 3 to the Consolidated Financial Statements located in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K. We base our estimates on historical experience and on various assumptions and other factors we believe to be reasonable, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. We make adjustments to judgments and estimates based on current facts and circumstances on an ongoing basis. Historically, actual results have not deviated significantly from those determined using the estimates described below or in Notes 2 and 3 to the Consolidated Financial Statements located in “Part II, Item 8. Financial Statements and Supplementary Data” to this Annual Report on Form 10 K. However, actual amounts could differ materially from those estimated at the time the consolidated financial statements are prepared.

We believe the following critical accounting policies are important to understand our financial condition and results of operations and require management’s most difficult, subjective or complex judgments, often as a result of the need to estimate the effect of matters that are inherently uncertain.

Revenue Recognition

We recognize revenue when persuasive evidence of an arrangement exists, delivery and disposal have occurred or services have been rendered, the price is fixed or determinable and collection is reasonably assured. We recognize revenue from three primary sources: 1) waste treatment, recycling and disposal, 2) field and industrial waste management services and 3) waste transportation services.

Table of Contents

Waste treatment and disposal revenue results primarily from fees charged to customers for treatment and/or disposal or recycling of specified wastes. Waste treatment and disposal revenue is generally charged on a per ton or per yard basis based on contracted prices and is recognized when services are complete.

Field and industrial waste management services revenue results primarily from specialty onsite services such as high pressure cleaning, tank cleaning, decontamination, remediation, transportation, spill cleanup and emergency response at refineries, chemical plants, steel and automotive plants, and other government, commercial and industrial facilities. These services are provided based on purchase orders or agreements with the customer and include prices based upon daily, hourly or job rates for equipment, materials and personnel. Revenues are recognized over the term of the agreements or as services are performed. Revenue is recognized on contracts with retainage when services have been rendered and collectability is reasonably assured.

Transportation revenue results from delivering customer waste to a disposal facility for treatment and/or disposal or recycling. Transportation services are generally not provided on a stand alone basis and instead are bundled with other Company services. However, in some instances we provide transportation and logistics services for shipment of waste from cleanup sites to disposal facilities operated by other companies. We account for our bundled arrangements as multiple deliverable arrangements and determine the amount of revenue recognized for each deliverable (unit of accounting) using the relative fair value method. Transportation revenue is recognized when the transported waste is received at the disposal facility. Waste treatment and disposal revenue under bundled arrangements is recognized when services are complete and the waste is disposed in the landfill.

Burial fees collected from customers for each ton or cubic yard of waste disposed in our landfills are paid to the respective local and/or state government entity and are not included in revenue. Revenue and associated costs from waste that has been received but not yet treated and disposed of in our landfills are deferred until disposal occurs.

Our Richland, Washington disposal facility is regulated by the WUTC, which approves our rates for disposal of LLRW. Annual revenue levels are established based on a six year rate agreement with the WUTC at amounts sufficient to cover the costs of operation and provide us with a reasonable profit. Per unit rates charged to LLRW customers during the year are based on our evaluation of disposal volume and radioactivity projections submitted to us by waste generators. Our proposed rates are then reviewed and approved by the WUTC. If annual revenue exceeds the approved levels set by the WUTC, we are required to refund excess collections to facility users on a pro rata basis. The current rate agreement with the WUTC was extended in 2013 and is effective until January 1, 2020.

Disposal Facility Accounting

We amortize landfill and disposal assets and certain related permits over their estimated useful lives. The units of consumption method is used to amortize landfill cell construction and development costs and asset retirement costs. Under the units of consumption method, we include costs incurred to date as well as future estimated construction costs in the amortization base of the landfill assets. Additionally, where appropriate, as discussed below, we also include probable expansion airspace that has yet to be permitted in the calculation of the total remaining useful life of the landfill asset. If we determine that expansion capacity should no longer be considered in calculating the total remaining useful life of a landfill asset, we may be required to recognize an asset impairment or incur significantly higher amortization expense over the remaining estimated useful life of the landfill asset. If at any time we make the decision to abandon the expansion effort, the capitalized costs related to the expansion effort would be expensed in the period of abandonment.

Our landfill assets and liabilities fall into the following two categories, each of which require accounting judgments and estimates:

- Landfill assets comprised of capitalized landfill development costs.
- Disposal facility retirement obligations relating to our capping, closure and post closure liabilities that result in corresponding retirement assets.

Table of Contents

Landfill Assets

Landfill assets include the costs of landfill site acquisition, permits and cell design and construction incurred to date. Landfill cells represent individual disposal areas within the overall treatment and disposal site and may be subject to specific permit requirements in addition to the general permit requirements associated with the overall site.

To develop, construct and operate a landfill cell, we must obtain permits from various regulatory agencies at the local, state and federal levels. The permitting process requires an initial site study to determine whether the location is feasible for landfill operations. The initial studies are reviewed by our environmental management group and then submitted to the regulatory agencies for approval. During the development stage we capitalize certain costs that we incur after site selection but before the receipt of all required permits if we believe that it is probable that the landfill cell will be permitted.

Upon receipt of regulatory approval, technical landfill cell designs are prepared. The technical designs, which include the detailed specifications to develop and construct all components of the landfill cell including the types and quantities of materials that will be required, are reviewed by our environmental management group. The technical designs are submitted to the regulatory agencies for approval. Upon approval of the technical designs, the regulatory agencies issue permits to develop and operate the landfill cell.

The types of costs that are detailed in the technical design specifications generally include excavation, natural and synthetic liners, construction of leachate collection systems, installation of groundwater monitoring wells, construction of leachate management facilities and other costs associated with the development of the site. We review the adequacy of our cost estimates at least annually. These development costs, together with any costs incurred to acquire, design and permit the landfill cell, including personnel costs of employees directly associated with the landfill cell design, are recorded to the landfill asset on the balance sheet as incurred.

To match the expense related to the landfill asset with the revenue generated by the landfill operations, we amortize the landfill asset on a units of consumption basis over its operating life, typically on a cubic yard or cubic meter of disposal space consumed. The landfill asset is fully amortized at the end of a landfill cell's operating life. The per unit amortization rate is calculated by dividing the sum of the landfill asset net book value plus estimated future development costs (as described above) for the landfill cell, by the landfill cell's estimated remaining disposal capacity. Amortization rates are influenced by the original cost basis of the landfill cell, including acquisition costs, which in turn is determined by geographic location and market values. We have secured significant landfill assets through business acquisitions and valued them at the time of acquisition based on fair value.

Included in the technical designs are factors that determine the ultimate disposal capacity of the landfill cell. These factors include the area over which the landfill cell will be developed, such as the depth of excavation, the height of the landfill cell elevation and the angle of the side slope construction. Landfill cell capacity used in the determination of amortization rates of our landfill assets includes both permitted and unpermitted disposal capacity. Unpermitted disposal capacity is included when management believes achieving final regulatory approval is probable based on our analysis of site conditions and interactions with applicable regulatory agencies.

We review the estimates of future development costs and remaining disposal capacity for each landfill cell at least annually. These costs and disposal capacity estimates are developed using input from independent engineers and internal technical and accounting managers and are reviewed and approved by our environmental management group. Any changes in future estimated costs or estimated disposal capacity are reflected prospectively in the landfill cell amortization rates.

We assess our long lived landfill assets for impairment when an event occurs or circumstances change that indicate the carrying amount may not be recoverable. Examples of events or circumstances that may indicate impairment of any of our landfill assets include, but are not limited to, the following:

- Changes in legislative or regulatory requirements impacting the landfill site permitting process making it more difficult and costly to obtain and/or maintain a landfill permit;

50

Table of Contents

- Actions by neighboring parties, private citizen groups or others to oppose our efforts to obtain, maintain or expand permits, which could result in denial, revocation or suspension of a permit and adversely impact the economic viability of the landfill. As a result of opposition to our obtaining a permit, improved technical information as a project progresses, or changes in the anticipated economics associated with a project, we may decide to reduce the scope of, or abandon, a project, which could result in an asset impairment; and
- Unexpected significant increases in estimated costs, significant reductions in prices we are able to charge our customers or reductions in disposal capacity that affect the ongoing economic viability of the landfill.

Disposal Facility Retirement Obligations

Disposal facility retirement obligations include the cost to close, maintain and monitor landfill cells and support facilities. As individual landfill cells reach capacity, we must cap and close the cells in accordance with the landfill cell permits. These capping and closure requirements are detailed in the technical design of each landfill cell and included as part of our approved regulatory permit. After the entire landfill cell has reached capacity and is certified closed, we must continue to maintain and monitor the landfill cell for a post closure period, which generally extends for 30 years. Costs associated with closure and post closure requirements generally include maintenance of the landfill cell and groundwater systems, and other activities that occur after the landfill cell has ceased accepting waste. Costs associated with post closure monitoring generally include groundwater sampling, analysis and statistical reports, transportation and disposal of landfill leachate, and erosion control costs related to the final cap.

We have a legally enforceable obligation to operate our landfill cells in accordance with the specific requirements, regulations and criteria set forth in our permits. This includes executing the approved closure/post closure plan and closing/capping the entire landfill cell in accordance with the established requirements, design and criteria contained in the permit. As a result, we record the fair value of our disposal facility retirement obligations as a liability in the period in which the regulatory obligation to retire a specific asset is triggered. For our individual landfill cells, the required closure and post closure obligations under the terms of our permits and our intended operation of the landfill cell are triggered and recorded when the cell is placed into service and waste is initially disposed in the landfill cell. The fair value is based on the total estimated costs to close the landfill cell and perform post closure activities once the landfill cell has reached capacity and is no longer accepting waste, discounted using a credit adjusted risk free rate. Retirement obligations are increased each year to reflect the passage of time by accreting the balance at the weighted average credit adjusted risk free rate that is used to calculate the recorded liability, with accretion charged to direct operating costs. Actual cash expenditures to perform closure and post closure activities reduce the retirement obligation liabilities as incurred. After initial measurement, asset retirement obligations are adjusted at the end of each period to reflect changes, if any, in the estimated future cash flows underlying the obligation. Disposal facility retirement assets are capitalized as the related disposal facility retirement obligations are incurred. Disposal facility retirement assets are amortized on a units of consumption basis as the disposal capacity is consumed.

Our disposal facility retirement obligations represent the present value of current cost estimates to close, maintain and monitor landfills and support facilities as described above. Cost estimates are developed using input from independent engineers, internal technical and accounting managers, as well as our environmental management group's interpretation of current legal and regulatory requirements, and are intended to approximate fair value. We estimate the timing of future payments based on expected annual disposal airspace consumption and then inflate the current cost estimate by an inflation rate, estimated at December 31, 2017 to be 2.6%. Inflated current costs are then discounted using our credit adjusted risk free interest rate, which approximates our incremental borrowing rate in effect at the time the obligation is established or when there are upward revisions to our estimated closure and post closure costs. Our weighted average credit adjusted risk free interest rate at December 31, 2017 was approximately 5.9%. Final closure and post closure obligations are currently estimated as being paid through the year 2105. During 2017 we updated several assumptions, including estimated costs and timing of closing our disposal cells. These updates resulted in a net decrease to our post closure obligations of \$352,000.

We update our estimates of future capping, closure and post-closure costs and of future disposal capacity for each landfill cell on an annual basis. Changes in inflation rates or the estimated costs, timing or extent of the required future activities to close, maintain and monitor landfills and facilities result in both: (i) a current adjustment to the recorded liability and

Table of Contents

related asset and (ii) a change in accretion and amortization rates which are applied prospectively over the remaining life of the asset. A hypothetical 1% increase in the inflation rate would increase our closure/post closure obligation by \$16.9 million. A hypothetical 10% increase in our cost estimates would increase our closure/post closure obligation by \$7.6 million.

Goodwill and Intangible Assets

As of December 31, 2017, the Company's goodwill balance was \$189.4 million. We assess goodwill for impairment during the fourth quarter as of October 1 of each year, and also if an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below its carrying amount. The assessment consists of comparing the fair value of the reporting unit to the carrying value of the net assets assigned to the reporting unit, including goodwill. Some of the factors that could indicate impairment include a significant adverse change in legal factors or in the business climate, an adverse action or assessment by a regulator, or failure to generate sufficient cash flows at the reporting unit. For example, field and industrial services represents an emerging business for the Company and has been the focus of a shift in strategy since the acquisition of EQ. Failure to execute on planned growth initiatives within this business could lead to the impairment of goodwill and intangible assets in future periods.

We determine our reporting units by identifying the components of each operating segment, and then aggregate components having similar economic characteristics based on quantitative and/or qualitative factors. At December 31, 2017, we had 14 reporting units, 8 of which had allocated goodwill.

Fair values are generally determined by using a market approach, applying a multiple of earnings based on guideline for publicly traded companies, an income approach, discounting projected future cash flows based on our expectations of the current and future operating environment, or a combination thereof. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. The rates used to discount projected future cash flows reflect a weighted average cost of capital based on our industry, capital structure and risk premiums including those reflected in the current market capitalization. In the event the fair value of a reporting unit exceeds its carrying amount, goodwill of the reporting unit is considered not impaired. If the carrying amount of a reporting unit exceeds its fair value, goodwill of the reporting unit is considered impaired, and an impairment charge would be recognized during the period in which the determination has been made for the amount by which the carrying amount exceeds the reporting unit's fair value; however, the loss recognized should not exceed the total amount of goodwill allocated to that reporting unit.

The result of the annual assessment of goodwill undertaken in the fourth quarter of 2017 indicated that the fair value of each of our reporting units was in excess of its respective carrying value, with the exception of the Resource Recovery reporting unit.

Our Resource Recovery reporting unit offers full-service storm water management and propylene glycol ("PG") deicing fluid recovery at major airports. Recovered fluids are transported to our recycling facility in Romulus, Michigan where they are distilled and resold to industrial users. The Resource Recovery reporting unit also generates revenues from brokered PG sales and services revenues for PG collection at the airports we service. Weak PG commodity prices and reduced PG collection volumes at the airports we service negatively impacted the reporting unit's prospective financial information in its discounted cash flow model and the reporting unit's estimated fair value. A longer-than-expected recovery in PG commodity pricing and PG collection volumes became evident during the fourth quarter of 2017 as management completed its 2018 budgeting cycle and updated the long-term projections for the reporting unit which, as a result, decreased the reporting unit's anticipated future cash flows as compared to those estimated previously.

The estimated fair value of the Resource Recovery reporting unit was determined under an income approach using discounted projected future cash flows and then compared to the reporting unit's carrying amount as of October 1, 2017. Based on the results of that comparison, the carrying amount of the Resource Recovery reporting unit, including \$5.5 million of goodwill, exceeded the estimated fair value of the reporting unit by more than \$5.5 million and, as a result, we recognized a \$5.5 million impairment charge, representing the reporting unit's entire goodwill balance, in the fourth quarter of 2017.

Table of Contents

We review intangible assets with indefinite useful lives for impairment during the fourth quarter as of October 1 of each year. Fair value is generally determined by considering an internally developed discounted projected cash flow analysis. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. If the fair value of an asset is determined to be less than the carrying amount of the intangible asset, an impairment in the amount of the difference is recorded in the period in which the annual assessment occurs.

The result of the annual assessment of intangible assets with indefinite useful lives undertaken in the fourth quarter of 2017 indicated no impairment charges were required, with the exception of the indefinite-lived intangible waste collection, recycling and resale permit associated with our Resource Recovery business.

In performing the annual indefinite-lived intangible assets impairment test, the estimated fair value of the Resource Recovery business' waste collection, recycling and resale permit was determined under an income approach using discounted projected future cash flows associated with the permit and then compared to the \$3.7 million carrying amount of the permit as of October 1, 2017. Based on the results of that evaluation, the carrying amount of the permit exceeded the estimated fair value of the permit and, as a result, we recognized a \$3.4 million impairment charge in the fourth quarter of 2017. The factors and timing contributing to the nonamortizing permit impairment charge were the same as the factors and timing described above with regards to the Resource Recovery reporting unit goodwill impairment charge.

We also review finite lived tangible and intangible assets for impairment whenever events or changes in circumstances indicate that the carrying value of an asset may not be recoverable. In order to assess whether a potential impairment exists, the assets' carrying values are compared with their undiscounted expected future cash flows. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. Impairments are measured by comparing the fair value of the asset to its carrying value. Fair value is generally determined by considering: (i) the internally developed discounted projected cash flow analysis; (ii) a third party valuation; and/or (iii) information available regarding the current market environment for similar assets. If the fair value of an asset is determined to be less than the carrying amount of the asset, an impairment in the amount of the difference is recorded in the period in which the events or changes in circumstances that indicated the carrying value of the asset may not be recoverable occurred.

In the fourth quarter of 2017, we performed an assessment of the Resource Recovery business' finite-lived tangible and intangible assets, as events indicated their carrying values may not be recoverable. The result of the assessment indicated no impairment charges were required. Otherwise, no events or circumstances occurred during 2017 that would indicate that our finite lived tangible and intangible assets may be impaired, therefore no other impairment tests were performed during 2017 other than the annual assessment of goodwill and intangible assets with indefinite useful lives conducted in the fourth quarter of every year.

On August 4, 2015, we entered into a definitive agreement to sell Allstate to a private investor group. Allstate represents the majority of the industrial services business we acquired with the acquisition of EQ. As a result of this agreement and management's strategic review, we evaluated the recoverability of the assets associated with our industrial services business. Our interim goodwill impairment test which included both Step I and Step II analysis was performed and resulted in a non cash goodwill impairment charge of \$6.7 million being recognized in the second quarter of 2015. See Note 5 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10 K for additional information on the sale of Allstate.

Our acquired permits and licenses generally have renewal terms of approximately 5 10 years. We have a history of renewing these permits and licenses as demonstrated by the fact that each of the sites' treatment permits and licenses have been renewed regularly since the facility began operations. We intend to continue to renew our permits and

licenses as they come up for renewal for the foreseeable future. Costs incurred to renew or extend the term of our permits and licenses are recorded in Selling, general and administrative expenses in our consolidated statements of operations.

Table of Contents

Share Based Payments

On May 27, 2015, our stockholders approved the Omnibus Incentive Plan (“Omnibus Plan”), which was approved by our Board of Directors on April 7, 2015. The Omnibus Plan was developed to provide additional incentives through equity ownership in US Ecology and, as a result, encourage employees and directors to contribute to our success. The Omnibus Plan provides, among other things, the ability for the Company to grant restricted stock, performance stock, options, stock appreciation rights, restricted stock units, performance stock units (“PSUs”) and other stock based awards or cash awards to officers, employees, consultants and non employee directors. Subsequent to the approval of the Omnibus Plan in May 2015, we stopped granting equity awards under our 2008 Stock Option Incentive Plan and our 2006 Restricted Stock Plan (“Previous Plans”), and the Previous Plans will remain in effect solely for the settlement of awards granted under the Previous Plans. No shares that are reserved but unissued under the Previous Plans or that are outstanding under the Previous Plans and reacquired by the Company for any reason will be available for issuance under the Omnibus Plan. The Omnibus Plan expires on April 7, 2025 and authorizes 1,500,000 shares of common stock for grant over the life of the Omnibus Plan.

As of December 31, 2017, we have PSUs outstanding under the Omnibus Plan. Each PSU represents the right to receive, on the settlement date, one share of the Company’s common stock. The total number of PSUs each participant is eligible to earn ranges from 0% to 200% of the target number of PSUs granted. The actual number of PSUs that will vest and be settled in shares is determined at the end of a three year performance period, based on total stockholder return relative to a set of peer companies and the S&P 600. The fair value of the PSUs is determined using a Monte Carlo simulation. Refer to Note 18 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K for a summary of the assumptions utilized in the Monte Carlo valuation of awards granted during 2017, 2016 and 2015.

As of December 31, 2017, we have stock option awards outstanding under the 1992 Stock Option Plan for Employees (“1992 Employee Plan”) and the 2008 Stock Option Incentive Plan (“2008 Stock Option Plan”). Subsequent to the approval of the Omnibus Plan in May 2015, we stopped granting equity awards under the 2008 Stock Option Plan. The 2008 Stock Option Plan will remain in effect solely for the settlement of awards previously granted. In April 2013, the 1992 Employee Plan expired and was cancelled except for options then outstanding.

The determination of fair value of stock option awards on the date of grant using the Black Scholes model is affected by our stock price and subjective assumptions. These assumptions include, but are not limited to, the expected term of stock options and expected stock price volatility over the term of the awards. Refer to Note 18 to the Consolidated Financial Statements in “Part II, Item 8. Financial Statements and Supplementary Data” of this Annual Report on Form 10 K for a summary of the assumptions utilized in 2017, 2016 and 2015. Our stock options have characteristics significantly different from those of traded options, and changes in the assumptions can materially affect the fair value estimates.

The Company has elected to account for forfeitures as they occur, rather than estimate expected forfeitures.

Income Taxes

Income taxes are accounted for using an asset and liability approach whereby we recognize deferred tax assets and liabilities for the expected future tax consequences of temporary differences between the financial statement and tax basis of assets and liabilities at the applicable tax rates. The effect of a change in tax rates on deferred tax assets and liabilities is recognized in the period that includes the enactment date. Deferred tax assets are evaluated for the likelihood of use in future periods. A valuation allowance is recorded against deferred tax assets if, based on the weight of the available evidence, it is more likely than not that some or all of the deferred tax assets will not be realized. The determination of the need for a valuation allowance, if any, requires our judgment and the use of

estimates. If we determine that we would be able to realize our deferred tax assets in the future in excess of their net recorded amount, we would make an adjustment to the deferred tax asset valuation allowance, which would reduce the provision for income taxes. As of December 31, 2017, we have deferred tax assets totaling approximately \$15.9 million, a valuation allowance of \$2.2 million and deferred tax liabilities totaling approximately \$71.2 million.

Table of Contents

The application of income tax law is inherently complex. Tax laws and regulations are voluminous and at times ambiguous and interpretations of guidance regarding such tax laws and regulations change over time. This requires us to make many subjective assumptions and judgments regarding the timing and amounts of deductible and taxable items and the probability of sustaining uncertain tax positions. A liability for uncertain tax positions is recorded in our financial statements on the basis of a two-step process whereby (1) we determine whether it is more likely than not that the tax position taken will be sustained based on the technical merits of the position and (2) for those tax positions that meet the more likely than not recognition threshold, we recognize the largest amount of tax benefit that is greater than 50% likely to be realized upon ultimate settlement with the related tax authority. As facts and circumstances change, we reassess these probabilities and record any changes in the financial statements as appropriate. Changes in our assumptions and judgments can materially affect our financial position, results of operations and cash flows. We recognize interest assessed by taxing authorities or interest associated with uncertain tax positions as a component of interest expense. We recognize any penalties assessed by taxing authorities or penalties associated with uncertain tax positions as a component of selling, general and administrative expenses.

On December 22, 2017, the Tax Act was signed into law making significant changes to the Internal Revenue Code. Changes include, but are not limited to, a corporate tax rate decrease from 35% to 21% effective for tax years beginning after December 31, 2017, the transition of U.S. international taxation from a worldwide tax system to a territorial system, and a one-time transition tax on the mandatory deemed repatriation of cumulative foreign earnings as of December 31, 2017. The Company has calculated a provisional amount of the impact of the Tax Act in its year end income tax provision in accordance with its understanding of the Tax Act and guidance available as of the date of this Annual Report on Form 10-K and as a result has recorded \$23.8 million as a net income tax benefit in the fourth quarter of 2017, the period in which the legislation was enacted. The provisional benefit amount related to the re-measurement of certain deferred tax assets and liabilities based on the rates at which they are expected to reverse in the future was \$25.2 million. The provisional expense amount related to the one-time transition tax on the mandatory deemed repatriation of foreign earnings was \$1.4 million based on cumulative foreign earnings of \$26.7 million.

In connection with the Tax Act being signed into law on December 22, 2017, the SEC staff issued Staff Accounting Bulletin No. 118 ("SAB 118") to address the application of GAAP in situations when a registrant does not have the necessary information available, prepared, or analyzed (including computations) in reasonable detail to complete the accounting for certain income tax effects of the Tax Act. In accordance with SAB 118, we have determined that the \$25.2 million of the deferred tax benefit recorded in connection with the re-measurement of certain deferred tax assets and liabilities and the \$1.4 million of current tax expense recorded in connection with the transition tax on the mandatory deemed repatriation of foreign earnings are provisional amounts estimated based on information available as of December 31, 2017. These amounts are subject to change as we obtain information necessary to complete the calculations. Any subsequent adjustment to these provisional amounts will be recorded to current tax expense in 2018, when the analysis is complete. We expect to complete our analysis of the provisional items during the second half of 2018. The effects of other provisions of the Tax Act are being analyzed and are subject to change as additional information, guidance, and regulation becomes available.

See Note 16 to the Consolidated Financial Statements in "Part II, Item 8. Financial Statements and Supplementary Data" of this Annual Report on Form 10 K for additional information regarding income taxes.

Litigation

We have, in the past, been involved in litigation requiring estimates of timing and loss potential whose timing and ultimate disposition is controlled by the judicial process. As of December 31, 2017, we did not have any ongoing, pending or threatened legal action that management believes, either individually or in the aggregate, would have a material adverse effect on our financial position, results of operations or cash flows. The decision to accrue costs or write off assets is based on the pertinent facts and our evaluation of present circumstances.

Off Balance Sheet Arrangements

We do not have any off balance sheet arrangements or interests in variable interest entities that would require consolidation. US Ecology operates through wholly owned subsidiaries.

55

Table of Contents

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Interest Rate Risk

We do not maintain equities, commodities, derivatives, or any other similar instruments for trading purposes. We have minimal interest rate risk on investments or other assets due to our preservation of capital approach to investments. At December 31, 2017, \$5.8 million of restricted cash was invested in fixed-income U.S. Treasury and U.S. government agency securities and money market accounts.

We are exposed to changes in interest rates as a result of our borrowings under the New Credit Agreement. Under the New Credit Agreement, Revolving Credit Facility borrowings incur interest at a base rate (as defined in the New Credit Agreement) or LIBOR, at the Company's option, plus an applicable margin which is determined according to a pricing grid under which the interest rate decreases or increases based on our ratio of funded debt to consolidated earnings before interest, taxes, depreciation and amortization (as defined in the New Credit Agreement). On October 29, 2014, the Company entered into an interest rate swap agreement with the intention of hedging the Company's interest rate exposure on a portion of the Company's outstanding LIBOR-based variable rate debt. The interest rate swap agreement continued to be effective following the termination of the Former Credit Agreement. Under the terms of the swap, the Company pays interest at the fixed effective rate of 3.67% and receives interest at the variable one-month LIBOR rate on an initial notional amount of \$250.0 million.

As of December 31, 2017, there were \$277.0 million of revolving loans outstanding under the New Credit Agreement. If interest rates were to rise and outstanding balances remain unchanged, we would be subject to higher interest payments on our outstanding debt. Subsequent to the effective date of the interest rate swap on December 31, 2014, we are subject to higher interest payments on only the unhedged borrowings under the New Credit Agreement.

Based on the outstanding indebtedness of \$277.0 million under the New Credit Agreement at December 31, 2017 and the impact of our interest rate hedge, if market rates used to calculate interest expense were to average 1% higher in the next twelve months, our interest expense would increase by approximately \$945,000 for the corresponding period.

Foreign Currency Risk

We are subject to currency exposures and volatility because of currency fluctuations. The majority of our transactions are in USD; however, our Canadian subsidiaries conduct business in both Canada and the United States. In addition, contracts for services that our Canadian subsidiaries provide to U.S. customers are generally denominated in USD. During 2017, our Canadian subsidiaries transacted approximately 61% of their revenue in USD and at any time have cash on deposit in USD and outstanding USD trade receivables and payables related to these transactions. These USD cash, receivable and payable accounts are subject to non-cash foreign currency translation gains or losses. Exchange rate movements also affect the translation of Canadian generated profits and losses into USD.

We established intercompany loans between our Canadian subsidiaries and our parent company, US Ecology, as part of a tax and treasury management strategy allowing for repayment of third party bank debt. These intercompany loans

are payable using CAD and are subject to mark to market adjustments with movements in the CAD. At December 31, 2017, we had \$21.4 million of intercompany loans outstanding between our Canadian subsidiaries and US Ecology. During 2017, the CAD strengthened as compared to the USD resulting in a \$1.4 million non cash foreign currency translation gain being recognized in the Company's consolidated statements of operations related to the intercompany loans. Based on intercompany balances as of December 31, 2017, a \$0.01 CAD increase or decrease in currency rate compared to the USD at December 31, 2017 would have generated a gain or loss of approximately \$214,000 for the year ended December 31, 2017.

We had a total pre tax foreign currency gain of \$516,000 for the year ended December 31, 2017. We currently have no foreign exchange contracts, option contracts or other foreign currency hedging arrangements. Management evaluates our risk position on an ongoing basis to determine whether foreign exchange hedging strategies should be employed.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of US Ecology, Inc.

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of US Ecology, Inc. and subsidiaries (the "Company") as of December 31, 2017 and 2016, the related consolidated statements of operations, comprehensive income, stockholders' equity, and cash flows, for each of the three years in the period ended December 31, 2017, and the related notes (collectively referred to as the "financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2017, based on criteria established in Internal Control — Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2017 and 2016, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2017, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2017, based on criteria established in Internal Control — Integrated Framework (2013) issued by COSO.

Basis for Opinions

The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Controls over Financial Reporting. Our responsibility is to express an opinion on these financial statements and an opinion on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the financial statements included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures to respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles,

Table of Contents

and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

/s/ DELOITTE & TOUCHE LLP

Boise, Idaho

February 26, 2018

We have served as the Company's auditor since 2009.

US ECOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1. DESCRIPTION OF BUSINESS

US Ecology, Inc. was most recently incorporated as a Delaware corporation in May 1987 as American Ecology Corporation. On February 22, 2010 the Company changed its name from American Ecology Corporation to US Ecology, Inc. US Ecology, Inc., through its subsidiaries, is a leading North American provider of environmental services to commercial and government entities. The Company addresses the complex waste management needs of its customers, offering treatment, disposal and recycling of hazardous and radioactive waste, as well as a wide range of complementary field and industrial services. US Ecology, Inc. has been protecting the environment since 1952, with operations in the United States, Canada and Mexico. Throughout these financial statements words such as “we,” “us,” “our,” “US Ecology” and the “Company” refer to US Ecology, Inc. and its subsidiaries.

Our operations are managed in two reportable segments reflecting our internal reporting structure and nature of services offered: Environmental Services and Field & Industrial Services.

Our Environmental Services segment provides a broad range of hazardous material management services including the transportation, recycling, treatment and disposal of hazardous and non-hazardous waste at Company-owned landfill, wastewater and other treatment facilities.

Our Field & Industrial Services segment provides packaging and collection of hazardous waste and total waste management solutions at customer sites and through our 10-day storage facilities. Services include on-site management, waste characterization, transportation and disposal of non-hazardous and hazardous waste. This segment also provides specialty services such as high-pressure cleaning, tank cleaning, decontamination, remediation, transportation, spill cleanup and emergency response and other services to commercial and industrial facilities and to government entities. On November 1, 2015, we sold our Allstate Power Vac, Inc. (“Allstate”) subsidiary, which was previously reported as part of our Field & Industrial Services segment, to a private investor group. See Note 5 for additional information.

NOTE 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Principles of Consolidation

The accompanying financial statements are prepared on a consolidated basis. All inter company balances and transactions have been eliminated in consolidation. Our year end is December 31.

Cash and Cash Equivalents

Cash and cash equivalents consist primarily of cash on deposit, money market accounts or short-term investments with original maturities of 90 days or less at the date of acquisition. Cash and cash equivalents totaled \$27.0 million and \$7.0 million at December 31, 2017 and 2016, respectively. At December 31, 2017 and 2016, we had \$18.6 million and \$4.8 million, respectively, of cash at our operations outside the United States.

Receivables

Receivables are stated at an amount management expects to collect. Based on management’s assessment of the credit history of the customers having outstanding balances and factoring in current economic conditions, management has

concluded that potential unidentified losses on balances outstanding at year end will not be material.

Unbilled receivables are recorded for work performed under contracts that have not yet been invoiced to customers and arise due to the timing of billings. Substantially all unbilled receivables at December 31, 2017, were billed in the following month.

65

Table of Contents

Restricted Cash and Investments

Restricted cash and investments of \$5.8 million at December 31, 2017 and 2016, represent funds held in third-party managed trust accounts as collateral for our financial assurance obligations for post-closure activities at our non-operating facilities. These funds are invested in fixed-income U.S. Treasury and government agency securities and money market accounts. The balances are adjusted monthly to fair market value based on quoted prices in active markets for identical or similar assets.

Revenue Recognition

We recognize revenue when persuasive evidence of an arrangement exists, delivery and disposal have occurred or services have been rendered, the price is fixed or determinable and collection is reasonably assured. We recognize revenue from three primary sources: 1) waste treatment, recycling and disposal, 2) field and industrial waste management services and 3) waste transportation services.

Waste treatment and disposal revenue results primarily from fees charged to customers for treatment and/or disposal or recycling of specified wastes. Waste treatment and disposal revenue is generally charged on a per-ton or per-yard basis based on contracted prices and is recognized when services are complete.

Field and industrial waste management services revenue results primarily from specialty onsite services such as high-pressure cleaning, tank cleaning, decontamination, remediation, transportation, spill cleanup and emergency response at refineries, chemical plants, steel and automotive plants, and other government, commercial and industrial facilities. These services are provided based on purchase orders or agreements with the customer and include prices based upon daily, hourly or job rates for equipment, materials and personnel. Revenues are recognized over the term of the agreements or as services are performed. Revenue is recognized on contracts with retainage when services have been rendered and collectability is reasonably assured.

Transportation revenue results from delivering customer waste to a disposal facility for treatment and/or disposal or recycling. Transportation services are generally not provided on a stand-alone basis and instead are bundled with other Company services. However, in some instances we provide transportation and logistics services for shipment of waste from cleanup sites to disposal facilities operated by other companies. We account for our bundled arrangements as multiple deliverable arrangements and determine the amount of revenue recognized for each deliverable (unit of accounting) using the relative fair value method. Transportation revenue is recognized when the transported waste is received at the disposal facility. Waste treatment and disposal revenue under bundled arrangements is recognized when services are complete and the waste is disposed in the landfill.

Burial fees collected from customers for each ton or cubic yard of waste disposed in our landfills are paid to the respective local and/or state government entity and are not included in revenue. Revenue and associated cost from waste that has been received but not yet treated and disposed of in our landfills are deferred until disposal occurs.

Our Richland, Washington disposal facility is regulated by the Washington Utilities and Transportation Commission (“WUTC”), which approves our rates for disposal of low-level radioactive waste (“LLRW”). Annual revenue levels are established based on a rate agreement with the WUTC at amounts sufficient to cover the costs of operation, including facility maintenance, equipment replacement and related costs, and provide us with a reasonable profit. Per-unit rates charged to LLRW customers during the year are based on our evaluation of disposal volume and radioactivity projections submitted to us by waste generators. Our proposed rates are then reviewed and approved by the WUTC. If annual revenue exceeds the approved levels set by the WUTC, we are required to refund excess collections to facility users on a pro-rata basis. Refundable excess collections, if any, are recorded in Accrued liabilities in the consolidated balance sheets. The current rate agreement with the WUTC was extended in 2013 and is effective until January 1,

2020.

Deferred Revenue

Revenue from waste that has been received but not yet treated or disposed or advance billings prior to treatment and disposal services are deferred until such services are completed.

66

Table of Contents

Property and Equipment

Property and equipment are recorded at cost and depreciated on the straight line method over estimated useful lives. Replacements and major repairs of property and equipment are capitalized and retirements are made when assets are disposed of or when the useful life has been exhausted. Minor components and parts are expensed as incurred. Repair and maintenance expenses were \$14.8 million, \$11.8 million and \$13.9 million for the years ended December 31, 2017, 2016 and 2015, respectively.

We assume no salvage value for our depreciable fixed assets. The estimated useful lives for significant property and equipment categories are as follows:

	Useful Lives
Vehicles and other equipment	3 to 10 years
Disposal facility and equipment	3 to 20 years
Buildings and improvements	5 to 40 years
Railcars	40 years

Disposal Cell Accounting

Qualified disposal cell development costs such as personnel and equipment costs incurred to construct new disposal cells are recorded and capitalized at cost. Capitalized cell development costs, net of recorded amortization, are added to estimated future costs of the permitted disposal cell to be incurred over the remaining construction of the cell, to determine the amount to be amortized over the remaining estimated cell life. Estimates of future costs are developed using input from independent engineers and internal technical and accounting managers. We review these estimates at least annually. Amortization is recorded on a unit of consumption basis, typically applying cost as a rate per cubic yard disposed. Disposal facility costs are expected to be fully amortized upon final closure of the facility, as no salvage value applies. Costs associated with ongoing disposal operations are charged to expense as incurred.

We have material financial commitments for closure and post closure obligations for certain facilities we own or operate. We estimate future cost requirements for closure and post closure monitoring based on RCRA and conforming state requirements and facility permits. RCRA requires that companies provide the responsible regulatory agency acceptable financial assurance for closure work and subsequent post closure monitoring of each facility for 30 years following closure. Estimates for final closure and post closure costs are developed using input from our technical and accounting managers as well as independent engineers and are reviewed by management at least annually. These estimates involve projections of costs that will be incurred after the disposal facility ceases operations, through the required post closure care period. The present value of the estimated closure and post closure costs are accreted using the interest method of allocation to direct costs in our consolidated statements of operations so that 100% of the future cost has been incurred at the time of payment.

Business Combinations

We account for business combinations under the acquisition method of accounting. The cost of an acquired company is assigned to the tangible and identifiable intangible assets purchased and the liabilities assumed on the basis of their fair values at the date of acquisition. Any excess of purchase price over the fair value of net tangible and intangible assets acquired is assigned to goodwill. The transaction costs associated with business combinations are expensed as they are incurred.

Goodwill

Goodwill represents the excess of the fair value of the consideration transferred over the fair value of the underlying identifiable assets and liabilities acquired. Goodwill is not amortized, but instead is assessed for impairment annually in the fourth quarter as of October 1 and also if an event occurs or circumstances change that may indicate a possible impairment. In the event that we determine that the value of goodwill has become impaired, we will incur an accounting charge for the amount of impairment during the period in which the determination has been made. See Note 3 for additional

67

Table of Contents

information related to the use of estimates in the Company's goodwill impairment tests and Note 12 for additional information related to the \$5.5 million goodwill impairment charge recorded in the fourth quarter of 2017.

Intangible Assets

Intangible assets are stated at the fair value assigned in a business combination net of amortization. We amortize our finite lived intangible assets using the straight line method over their estimated economic lives ranging from 1 to 45 years. We review intangible assets with indefinite useful lives for impairment during the fourth quarter as of October 1 of each year. We also review both indefinite lived and finite lived intangible assets for impairment whenever events or changes in circumstances indicate that the carrying value of an intangible asset may not be recoverable. See Note 3 for additional information related to the use of estimates in the Company's intangible assets impairment tests and Note 12 for additional information related to the \$3.4 million indefinite-lived intangible asset impairment charge recorded in the fourth quarter of 2017.

Our acquired permits and licenses generally have renewal terms of approximately 5-10 years. We have a history of renewing these permits and licenses as demonstrated by the fact that each of the sites' treatment permits and licenses have been renewed regularly since the facility began operations. We intend to continue to renew our permits and licenses as they come up for renewal for the foreseeable future. Costs incurred to renew or extend the term of our permits and licenses are recorded in Selling, general and administrative expenses in our consolidated statements of operations.

Impairment of Long Lived Assets

Long-lived assets consist primarily of property and equipment facility development costs and finite-lived intangible assets. The recoverability of long-lived assets is evaluated periodically through analysis of operating results and consideration of other significant events or changes in the business environment. If an operating unit had indications of possible impairment, we would evaluate whether impairment exists on the basis of undiscounted expected future cash flows from operations over the remaining amortization period. If an impairment loss were to exist, the carrying amount of the related long-lived assets would be reduced to their estimated fair value.

Deferred Financing Costs

Deferred financing costs are amortized over the life of our new senior secured credit agreement (the "New Credit Agreement"). Amortization of deferred financing costs is included as a component of interest expense in the consolidated statements of operations.

Deferred financing costs associated with the New Credit Agreement were \$3.4 million, net of accumulated amortization and have been recorded in Prepaid expenses and other current assets and Other assets in the consolidated balance sheets as of December 31, 2017.

Deferred financing costs associated with our Former Term Loan were \$5.0 million, net of accumulated amortization and have been recorded to Long-term debt in the consolidated balance sheets as of December 31, 2016. Deferred financing costs associated with our Former Revolving Credit Facility were \$1.4 million, net of accumulated amortization and have been recorded in Prepaid expenses and other current assets and Other assets in the consolidated balance sheets as of December 31, 2016.

The Company wrote off certain unamortized deferred financing costs and original issue discount associated with the Former Credit Agreement that were to be amortized to interest expense in future periods through a one-time charge of \$5.5 million to Interest expense in the second quarter of 2017.

Derivative Instruments

In order to manage interest rate exposure, we entered into an interest rate swap agreement in October 2014 that effectively converts a portion of our variable-rate debt to a fixed interest rate. Changes in the fair value of the interest rate swap are recorded as a component of accumulated other comprehensive income within stockholders' equity, and are recognized in

68

Table of Contents

interest expense in the period in which the payment is settled. The interest rate swap has an effective date of December 31, 2014 in an initial notional amount of \$250.0 million. The Company does not hold or issue derivative financial instruments for trading or speculative purposes.

Foreign Currency

Our Canadian operations' functional currency is the Canadian dollar ("CAD"). Assets and liabilities are translated to U.S. dollars ("USD") at the exchange rate in effect at the balance sheet date and revenue and expenses at the average exchange rate for the period. Gains and losses from the translation of the consolidated financial statements of our Canadian subsidiaries into USD are included in stockholders' equity as a component of Accumulated other comprehensive income. Gains and losses resulting from foreign currency transactions are recognized in the consolidated statements of operations. Recorded balances that are denominated in a currency other than the functional currency are re-measured to the functional currency using the exchange rate at the balance sheet date and gains or losses are recorded in the statements of operations.

Income Taxes

Income taxes are accounted for using an asset and liability approach. This requires the recognition of deferred tax assets and liabilities for the expected future tax consequences of temporary differences between the financial statement and tax basis of assets and liabilities at the applicable tax rates. The effect of a change in tax rates on deferred tax assets and liabilities is recognized in the period that includes the enactment date.

We recognize deferred tax assets to the extent that we believe these assets are more likely than not to be realized. In making such a determination, we consider all available positive and negative evidence, including future reversals of existing taxable temporary differences, projected future taxable income, tax planning strategies, and results of recent operations. If we determine that we would be able to realize our deferred tax assets in the future in excess of their net recorded amount, we would make an adjustment to the deferred tax asset valuation allowance, which would reduce the provision for income taxes.

The application of income tax law is inherently complex. Tax laws and regulations are voluminous and at times ambiguous and interpretations of guidance regarding such tax laws and regulations change over time. This requires us to make many subjective assumptions and judgments regarding the timing and amounts of deductible and taxable items and the probability of sustaining uncertain tax positions. A liability for uncertain tax positions is recorded in our consolidated financial statements on the basis of a two-step process whereby (1) we determine whether it is more likely than not that the tax position taken will be sustained based on the technical merits of the position and (2) for those tax positions that meet the more likely than not recognition threshold, we recognize the largest amount of tax benefit that is greater than 50% likely to be realized upon ultimate settlement with the related tax authority. As facts and circumstances change, we reassess these probabilities and record any changes in the financial statements as appropriate. Our tax returns are subject to audit by the Internal Revenue Service ("IRS"), various states in the U.S. and the Canadian Revenue Agency.

Insurance

Accrued costs for our self-insured health care coverage were \$1.1 million and \$1.0 million at December 31, 2017 and 2016, respectively.

Earnings Per Share

Basic earnings per share is calculated based on the weighted average number of outstanding common shares during the applicable period. Diluted earnings per share is based on the weighted average number of outstanding common shares plus the weighted average number of potential outstanding common shares. Potential common shares that would increase earnings per share or decrease loss per share are anti dilutive and are excluded from earnings per share computations. Earnings per share is computed separately for each period presented.

Table of Contents

Treasury Stock

Shares of common stock repurchased by us are recorded at cost as treasury stock and result in a reduction of stockholders' equity in our consolidated balance sheets. Treasury shares are reissued using the weighted average cost method for determining the cost of the shares reissued. The difference between the cost of the shares reissued and the issuance price is added or deducted from additional paid in capital.

Recently Issued Accounting Pronouncements

In February 2018, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") No. 2018-02, Income Statement-Reporting Comprehensive Income (Topic 220). This ASU amends the guidance in Accounting Standards Codification ("ASC") 220 on the reclassification of certain tax effects from accumulated other comprehensive income. The primary purpose of the ASU is to address industry concerns related to the application of ASC 740 to certain provisions of the new tax reform legislation also known as the Tax Cuts and Jobs Act of 2017 (the "Tax Act"). The guidance is effective for annual and interim periods beginning after December 15, 2018, and early adoption is permitted. An entity will apply this guidance to each period in which the effect of the Tax Act (or portion thereof) is recorded and may apply it either (1) retrospectively as of the date of enactment or (2) as of the beginning of the period of adoption. The Company plans to adopt this pronouncement on January 1, 2018 and does not expect the impact on its consolidated financial statements to be material.

In January 2018, the FASB released guidance on the accounting for tax on the global intangible low-taxed income ("GILTI") provisions of the Tax Act. The GILTI provisions impose a tax on foreign income in excess of a deemed return on tangible assets of foreign corporations. Because of the complexity of the new GILTI tax rules, we are continuing to evaluate this provision of the Tax Act and the application of ASC 740. Under accounting principles generally accepted in the United States ("GAAP"), we are allowed to make an accounting policy choice of either (1) treating taxes due on future U.S. inclusions in taxable income related to GILTI as a current-period expense when incurred (the "period cost method") or (2) factoring such amounts into a company's measurement of its deferred taxes (the "deferred method"). Our selection of an accounting policy with respect to the new GILTI tax rules will depend, in part, on analyzing our global income to determine whether we expect to have future U.S. inclusions in taxable income related to GILTI and, if so, what the impact is expected to be. Because whether we expect to have future U.S. inclusions in taxable income related to GILTI depends on not only our current structure and estimated future results of global operations but also our intent and ability to modify our structure and/or our business, we are not yet able to reasonably estimate the effect of this provision of the Tax Act. Therefore, we have not made any adjustments related to potential GILTI tax in our consolidated financial statements and have not made a policy decision regarding whether to record deferred taxes on GILTI.

On December 22, 2017, the SEC staff issued Staff Accounting Bulletin No. 118 ("SAB 118"), which provides guidance on accounting for the tax effects of the Tax Act. SAB 118 provides a measurement period that should not extend beyond one year from the Tax Act enactment date for companies to complete the accounting under ASC 740. In accordance with SAB 118, a company must reflect the income tax effects of those aspects of the Tax Act for which the accounting under ASC 740 is complete. To the extent that a company's accounting for certain income tax effects of the Tax Act is incomplete but it is able to determine a reasonable estimate, it must record a provisional estimate in the financial statements. If a company cannot determine a provisional estimate to be included in the financial statements, it should continue to apply ASC 740 on the basis of the provisions of the tax laws that were in effect immediately before the enactment of the Tax Act. Where the Company was able to make reasonable estimates of the effects of elements for which the analysis is not yet complete, the Company recorded provisional amounts. Where the Company was not yet able to make reasonable estimates of the impact of certain elements, we have not recorded any provisional amounts related to those elements and have continued accounting for them in accordance with ASC 740 on the basis of the tax laws in effect before the Tax Act.

In January 2017, the FASB issued ASU No. 2017-04, Simplifying the Test for Goodwill Impairment (Topic 350). This ASU removes the requirement to compare the implied fair value of goodwill with its carrying amount as part of step 2 of the goodwill impairment test. As a result, under the ASU, “an entity should perform its annual, or interim, goodwill impairment test by comparing the fair value of a reporting unit with its carrying amount and should recognize an impairment charge for the amount by which the carrying amount exceeds the reporting unit’s fair value; however, the loss recognized should not exceed the total amount of goodwill allocated to that reporting unit.” The guidance is effective

Table of Contents

prospectively for annual and interim periods beginning after December 15, 2019. Early adoption is permitted. The Company early adopted ASU 2017-04 on January 1, 2017 and the standard did not have a material impact on its consolidated financial statements.

In November 2016, the FASB issued ASU No. 2016-18, Restricted Cash (Topic 230). This ASU amends the guidance in ASC 230 to add or clarify guidance on the classification and presentation of restricted cash in the statement of cash flows. ASU 2016-18 is based on the EITF's consensus reached on Issue 16-A. The guidance is effective for annual and interim periods beginning after December 15, 2017. The guidance must be applied retrospectively to all periods presented. The Company will adopt this pronouncement on January 1, 2018, using a retrospective adoption method. Upon adoption, amounts described as restricted cash will be included with cash and cash equivalents when reconciling the beginning-of-year and end-of-year amounts presented on the statements of cash flows.

In August 2016, the FASB issued ASU No. 2016-15, Statements of Cash Flows (Topic 230). This ASU amends the guidance in ASC 230 on the classification of certain cash receipts and payments in the statement of cash flows. The primary purpose of the ASU is to reduce the diversity in practice that has resulted from the lack of consistent principles on this topic. The guidance is effective for annual and interim periods beginning after December 15, 2017. The guidance must be applied retrospectively to all periods presented. The Company will adopt this pronouncement on January 1, 2018, using a retrospective adoption method and does not expect the impact on its consolidated financial statements to be material.

In March 2016, the FASB issued ASU No. 2016-09, Compensation - Stock Compensation (Topic 718). This ASU requires excess tax benefits and tax deficiencies, which arise due to differences between the measure of compensation expense and the amount deductible for tax purposes, to be recorded directly through earnings as a component of income tax expense. Previously, these differences were generally recorded in additional paid-in capital and thus had no impact on net income. The change in treatment of excess tax benefits and tax deficiencies also impacts the computation of diluted earnings per share, and the cash flows associated with those items are classified as operating activities on the consolidated statements of cash flows. Additionally, ASU 2016-09 permits entities to make an accounting policy election for the impact of forfeitures on the recognition of expense for share-based payment awards. Forfeitures can be estimated, as allowed under previous standards, or recognized when they occur. The amendments in this ASU became effective in the first quarter of 2017. The Company adopted this ASU on January 1, 2017 and the standard did not have a material impact on its consolidated financial statements. We have elected to account for forfeitures as they occur. Adoption of the ASU did not result in any cumulative effect adjustments to retained earnings or other components of stockholders' equity as of the date of adoption, as well as there were no retrospective adjustments to our consolidated cash flows.

In February 2016, the FASB issued ASU No. 2016-02, Leases (Topic 842). The ASU significantly changes the accounting model used by lessees to account for leases, requiring that all material leases be presented on the balance sheet. Lessees will recognize substantially all leases on the balance sheet as a right-of-use asset and a corresponding lease liability. The liability will be equal to the present value of lease payments. The asset will be based on the liability, subject to adjustment, such as for initial direct costs. The guidance is effective for annual and interim periods beginning after December 15, 2018. The guidance must be applied using the modified retrospective approach. Early

adoption is permitted. We are currently assessing the impact the adoption of ASU 2016-02 may have on our consolidated financial position, results of operations and cash flows.

In May 2014, the FASB issued ASU No. 2014-09, Revenue from Contracts with Customers (Topic 606), which provides guidance for revenue recognition. The ASU's core principle is that a company will recognize revenue when it transfers promised goods or services to customers in an amount that reflects the consideration to which the company expects to be entitled in exchange for those goods or services. The ASU also requires enhanced disclosures regarding the nature, amount, timing, and uncertainty of revenues and cash flows from contracts with customers. The guidance permits two methods of adoption: retrospectively to each prior reporting period presented (full retrospective method), or retrospectively with the cumulative effect of initially applying the guidance recognized at the date of initial application (modified retrospective method). The Company will adopt this ASU using the modified retrospective method.

In August 2015, the FASB issued ASU 2015-14, Revenue from Contracts with Customers (Topic 606): Deferral of the Effective Date, which deferred the effective date established in ASU 2014-09. The amendments in ASU 2014-09 are now effective for annual reporting periods beginning after December 15, 2017, including interim periods within that reporting

Table of Contents

period. Early adoption is permitted but not before annual periods beginning after December 15, 2016. The Company will adopt the ASU, as amended, effective January 1, 2018.

To assess the impact of ASU 2014-09, we have read the amended guidance, attended trainings and have consulted with external accounting professionals on a regular basis to assist with the understanding and interpretation of the ASU to our revenue recognition. The Company completed its review of customer contracts in each of its operating segments for all significant service lines and has reached conclusions on key accounting assessments related to the ASU. As a result of our analysis, we identified and implemented appropriate changes to our business processes, systems and controls to support recognition and disclosure under the new standard.

The Company has concluded that the new guidance will not materially affect the timing and amount of revenue recognized. However, the presentation and disclosure requirements of the standard will result in expanded disclosures around the disaggregation of revenue among other new disclosures.

NOTE 3. USE OF ESTIMATES

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements, as well as the reported amounts of revenue and expenses during the reporting period. Listed below are the estimates and assumptions that we consider to be significant in the preparation of our consolidated financial statements.

- Allowance for Doubtful Accounts - We estimate losses for uncollectible accounts based on the aging of the accounts receivable and an evaluation of the likelihood of success in collecting the receivable.
- Recovery of Long Lived Assets - We evaluate the recovery of our long lived assets periodically by analyzing our operating results and considering significant events or changes in the business environment.
- Income Taxes - We assume the deductibility of certain costs in our income tax filings, estimate our income tax rate and estimate the future recovery of deferred tax assets.
- Legal and Environmental Accruals - We estimate the amount of potential exposure we may have with respect to litigation and environmental claims and assessments.
- Disposal Cell Development and Final Closure/Post Closure Amortization - We expense amounts for disposal cell usage and closure and post closure costs for each cubic yard of waste disposed of at our operating facilities. In determining the amount to expense for each cubic yard of waste disposed, we estimate the cost to develop each disposal cell and the closure and post closure costs for each disposal cell and facility. The expense for each cubic yard is then calculated based on the remaining permitted capacity and total permitted capacity. Estimates for closure and post closure costs are developed using input from third party engineering consultants, and our internal technical and accounting personnel. Management reviews estimates at least annually. Estimates for final disposal cell closure and post closure costs consider when the costs would actually be paid and, where appropriate, inflation and discount rates.
- Business Acquisitions - The Company records assets and liabilities of the acquired business at their fair values. Acquisition related transaction and restructuring costs are expensed rather than treated as part of the cost of the acquisition. Goodwill represents the excess of the cost of an acquired business over the fair value of the identifiable tangible and intangible assets acquired and liabilities assumed in a business acquisition.
- Goodwill - We assess goodwill for impairment during the fourth quarter as of October 1 of each year or sooner if an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below

its carrying amount. The assessment consists of comparing the estimated fair value of the reporting unit to the carrying value of the net assets assigned to the reporting unit, including goodwill. Fair values are generally determined by using both the market approach, applying a multiple of earnings based on guideline for publicly traded companies, and the

Table of Contents

income approach, discounting projected future cash flows based on our expectations of the current and future operating environment. The rates used to discount projected future cash flows reflect a weighted average cost of capital based on our industry, capital structure and risk premiums including those reflected in the current market capitalization. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. Failure to execute on planned growth initiatives within the related reporting units, coupled with the other factors mentioned above, could lead to the impairment of goodwill and other long-lived assets in future periods.

- **Intangible Assets** - We review intangible assets with indefinite useful lives for impairment during the fourth quarter as of October 1 of each year. Fair value is generally determined by considering an internally-developed discounted projected cash flow analysis. If the fair value of an asset is determined to be less than the carrying amount of the intangible asset, an impairment in the amount of the difference is recorded in the period in which the annual assessment occurs.

We also review finite lived intangible assets for impairment whenever events or changes in circumstances indicate that the carrying value of an intangible asset may not be recoverable. In order to assess whether a potential impairment exists, the assets' carrying values are compared with their undiscounted expected future cash flows. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. Impairments are measured by comparing the fair value of the asset to its carrying value. Fair value is generally determined by considering: (i) the internally-developed discounted projected cash flow analysis; (ii) a third party valuation; and/or (iii) information available regarding the current market environment for similar assets. If the fair value is determined to be less than the carrying amount of the intangible assets, an impairment in the amount of the difference is recorded in the period in which the events or changes in circumstances that indicated the carrying value of the intangible assets may not be recoverable occurred.

Actual results could differ materially from the estimates and assumptions that we use in the preparation of our consolidated financial statements. As it relates to estimates and assumptions in amortization rates and environmental obligations, significant engineering, operations and accounting judgments are required. We review these estimates and assumptions no less than annually. In many circumstances, the ultimate outcome of these estimates and assumptions will not be known for decades into the future. Actual results could differ materially from these estimates and assumptions due to changes in applicable regulations, changes in future operational plans and inherent imprecision associated with estimating environmental impacts far into the future.

NOTE 4. BUSINESS COMBINATIONS**Environmental Services Inc.**

On May 2, 2016, the Company acquired 100% of the outstanding shares of Environmental Services Inc., (“ESI”), an environmental services company based in Tilbury, Ontario, Canada. ESI is focused primarily on hazardous and non-hazardous transportation and disposal, hazardous and non-hazardous waste treatment, industrial services, confined space rescue and emergency response work throughout Ontario. The total purchase price was \$4.9 million, net of cash acquired, and was funded with cash on hand. ESI is reported as part of our Environmental Services segment, however, revenues, net income, earnings per share and total assets of ESI are not material to our consolidated financial position or results of operations.

We allocated the purchase price to the assets acquired and liabilities assumed based on estimates of the fair value at the date of the acquisition, resulting in \$1.0 million allocated to goodwill (which is not deductible for tax purposes), \$813,000 allocated to intangible assets (primarily customer relationships) to be amortized over a weighted average life of approximately 14 years, and \$686,000 allocated to indefinite-lived environmental permits.

Table of Contents

Acquisition of Vernon, California Facility

On October 1, 2016, we acquired the Vernon, California based RCRA Part B, liquids and solids waste treatment and storage facility of Evoqua Water Technologies LLC for \$5.0 million. The Vernon, California facility is reported as part of our Environmental Services segment, however, revenues, net income, earnings per share and total assets of the Vernon, California facility are not material to our consolidated financial position or results of operations.

We allocated the purchase price to the assets acquired and liabilities assumed based on estimates of the fair value at the date of the acquisition, resulting in \$354,000 allocated to goodwill, \$1.9 million allocated to intangible assets (primarily customer relationships) to be amortized over a weighted average life of approximately 20 years, and \$1.3 million allocated to indefinite-lived environmental permits.

NOTE 5. DIVESTITURES

Divestiture of Augusta, Georgia Facility

On April 5, 2016, we completed the divestiture of our Augusta, Georgia facility for cash proceeds of \$1.9 million. The Augusta, Georgia facility was reported as part of our Environmental Services segment. Sales, net income and total assets of the Augusta, Georgia facility are not material to our consolidated financial position or results of operations in any period presented. We recognized a \$1.9 million pre-tax gain on the divestiture of the Augusta, Georgia facility, which is included in Other income (expense) in our consolidated statements of operations for the year ended December 31, 2016.

Divestiture of Allstate

On November 1, 2015, we completed the divestiture of Allstate for cash proceeds at closing of \$58.8 million. For the year ended December 31, 2015, we recognized a pre-tax loss on the divestiture of Allstate, including transaction-related costs, of \$542,000, which was included in Other income (expense) in our consolidated statements of operations. On April 25, 2016, we received additional cash proceeds of \$827,000 in settlement of final post-closing adjustments. We recognized a \$178,000 pre-tax gain on the divestiture of Allstate, which is included in Other income (expense) in our consolidated statements of operations for the year ended December 31, 2016.

Prior to the divestiture, Allstate represented the majority of the industrial services business included in our Field & Industrial Services segment. As a result of this divestiture and management's strategic review, we evaluated the recoverability of the assets associated with our industrial services business. Based on this analysis, we recorded a non-cash goodwill impairment charge of \$6.7 million in the second quarter of 2015. The sale of Allstate did not meet the requirements to be reported as a discontinued operation as defined in ASU No. 2014-08, Presentation of Financial Statements (Topic 205) and Property, Plant and Equipment (Topic 360), Reporting Discontinued Operations and Disclosures of Disposals of Components of an Entity.

Loss before income taxes from Allstate of \$4.9 million is reflected in the Company's consolidated statements of operations for the year ended December 31, 2015 and includes a non-cash goodwill impairment charge of \$6.4 million.

Table of Contents

NOTE 6. ACCUMULATED OTHER COMPREHENSIVE INCOME (LOSS)

Changes in accumulated other comprehensive income (loss) (“AOCI”) consisted of the following:

\$s in thousands	Foreign	Unrealized Gain	Total
	Currency Translation	(Loss) on Interest Rate Hedge	
Balance at December 31, 2015	\$ (14,028)	\$ (3,038)	\$ (17,066)
Other comprehensive income (loss) before reclassifications, net of tax	1,379	(1,121)	258
Amounts reclassified out of AOCI, net of tax (1)	—	2,083	2,083
Other comprehensive income, net	1,379	962	2,341
Balance at December 31, 2016	\$ (12,649)	\$ (2,076)	\$ (14,725)
Other comprehensive income before reclassifications, net of tax	4,046	45	4,091
Amounts reclassified out of AOCI, net of tax (2)	—	1,530	1,530
Other comprehensive income, net	4,046	1,575	5,621
Balance at December 31, 2017	\$ (8,603)	\$ (501)	\$ (9,104)

- (1) Before-tax reclassifications of \$3.2 million (\$2.1 million after-tax) for the year ended December 31, 2016 were included in Interest expense in the Company’s consolidated statements of operations. Amount relates to the Company’s interest rate swap which is designated as a cash flow hedge. Changes in fair value of the swap recognized in AOCI are reclassified to interest expense when hedged interest payments on the underlying long-term debt are made. Amounts in AOCI expected to be recognized in interest expense over the next 12 months total approximately \$3.2 million (\$2.1 million after tax).
- (2) Before-tax reclassifications of \$2.3 million (\$1.5 million after-tax) for the year ended December 31, 2017 were included in Interest expense in the Company’s consolidated statements of operations. Amount relates to the Company’s interest rate swap which is designated as a cash flow hedge. Changes in fair value of the swap recognized in AOCI are reclassified to interest expense when hedged interest payments on the underlying long-term debt are made. Amounts in AOCI expected to be recognized in interest expense over the next 12 months total approximately \$1.8 million (\$1.4 million after tax).

NOTE 7. DISCLOSURE OF SUPPLEMENTAL CASH FLOW INFORMATION

\$s in thousands	For the Year Ended December 31,		
	2017	2016	2015
Income taxes and interest paid:			
Income taxes paid, net of receipts	\$ 10,714	\$ 25,729	\$ 27,252
Interest paid	11,364	14,304	18,587
Non-cash investing and financing activities:			
Closure/Post-closure retirement asset	(352)	426	(349)
Capital expenditures in accounts payable	2,302	2,906	3,805
Acquisition of equipment with financing arrangements	531	1,156	—
Restricted stock issuances from treasury shares	105	408	127

NOTE 8. FAIR VALUE MEASUREMENTS

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Assets and liabilities recorded at fair value are categorized using defined hierarchical levels directly related to the amount of subjectivity associated with the inputs to fair value measurements, as follows:

Level 1 - Quoted prices in active markets for identical assets or liabilities;

Level 2 - Inputs other than quoted prices included within Level 1 that are either directly or indirectly observable;

75

Table of Contents

Level 3 - Unobservable inputs in which little or no market activity exists, requiring an entity to develop its own assumptions that market participants would use to value the asset or liability.

The Company's financial instruments consist of cash and cash equivalents, accounts receivable, restricted cash and investments, accounts payable and accrued liabilities, debt and interest rate swap agreements. The estimated fair value of cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities approximate their carrying value due to the short-term nature of these instruments.

The Company estimates the fair value of its variable-rate debt using Level 2 inputs, such as interest rates, related terms and maturities of similar obligations. At December 31, 2017, the carrying value of the Company's variable-rate debt approximates fair value due to the short-term nature of the interest rates.

The Company's assets and liabilities measured at fair value on a recurring basis at December 31, 2017 and 2016 consisted of the following:

\$s in thousands	2017			Total
	Quoted Price in Active Markets (Level 1)	Other Observable Inputs (Level 2)	Unobservable Inputs (Level 3)	
Assets:				
Fixed-income securities (1)	\$ 1,396	\$ 2,649	\$ —	\$ 4,045
Money market funds (2)	1,757	—	—	1,757

Total	\$ —	\$ 3,198	\$ —	\$ 3,198

(1)

We invest a portion of our Restricted cash and investments in fixed income securities, including U.S. Treasury and U.S. agency securities. We measure the fair value of U.S. Treasury securities using quoted prices for identical assets in active markets. We measure the fair value of U.S. agency securities using observable market activity for similar assets. The fair value of our fixed income securities approximates our cost basis in the investments.

- (2) We invest a portion of our Restricted cash and investments in money market funds. We measure the fair value of these money market fund investments using quoted prices for identical assets in active markets.
- (3) In order to manage interest rate exposure, we entered into an interest rate swap agreement in October 2014 that effectively converts a portion of our variable-rate debt to a fixed interest rate. The swap is designated as a cash flow hedge, with gains and losses deferred in other comprehensive income to be recognized as an adjustment to interest expense in the same period that the hedged interest payments affect earnings. The interest rate swap has an effective date of December 31, 2014 with an initial notional amount of \$250.0 million. The fair value of the interest rate swap agreement represents the difference in the present value of cash flows calculated at the contracted interest rates and at

Table of Contents

current market interest rates at the end of the period. We calculate the fair value of the interest rate swap agreement quarterly based on the quoted market price for the same or similar financial instruments. The fair value of the interest rate swap agreement is included in Other long-term liabilities in the Company's consolidated balance sheet as of December 31, 2017 and 2016.

NOTE 9. CONCENTRATIONS AND CREDIT RISK

Major Customers

No customer accounted for more than 10% of total revenue for the years ended December 31, 2017, 2016 or 2015.

No customer accounted for more than 10% of total receivables as of December 31, 2017 or 2016.

Credit Risk Concentration

We maintain most of our cash and cash equivalents with nationally recognized financial institutions. Substantially all balances are uninsured and are not used as collateral for other obligations. Concentrations of credit risk on accounts receivable are believed to be limited due to the number, diversification and character of the obligors and our credit evaluation process.

Labor Concentrations

As of December 31, 2017, 27 employees were represented by the Paper, Allied-Industrial Chemical & Energy Workers International Union, AFL-CIO, CLC (PACE) on behalf of Local 9777 and Local 12-369; 117 employees at our Blainville, Québec, Canada facility were represented by the Communications, Energy and Paperworkers Union of Canada; 146 employees were represented by the Local 324 Operating Engineers Union; and 49 employees were represented by the International Brotherhood of Teamsters on behalf of Local 283, Local 560, and Local 728. As of December 31, 2017, our 1,233 other employees did not belong to a union.

NOTE 10. RECEIVABLES

Receivables as of December 31, 2017 and 2016 consisted of the following:

\$s in thousands	2017	2016
Trade	\$ 96,760	\$ 84,487
Unbilled revenue	16,176	13,835
Other	637	831
Total receivables	113,573	99,153
Allowance for doubtful accounts	(2,796)	(2,334)
Receivables, net	\$ 110,777	\$ 96,819

The allowance for doubtful accounts is a provision for uncollectible accounts receivable and unbilled receivables. The allowance is evaluated and adjusted to reflect our collection history and an analysis of the accounts receivables aging. The allowance is decreased by accounts receivable as they are written off. The allowance is adjusted periodically to reflect actual experience. The change in the allowance during 2017, 2016 and 2015 was as follows:

Charged

Edgar Filing: US ECOLOGY, INC. - Form 10-K

Year ended December 31, 2015	\$ 704	\$ 2,224	\$ 848	\$ (550) (1)	\$ 3,226

Table of Contents

(1) Adjustment for the year ended December 31, 2015 relates to the sale of Allstate on November 1, 2015. For additional information on the sale of Allstate, see Note 5.

NOTE 11. PROPERTY AND EQUIPMENT

Property and equipment as of December 31, 2017 and 2016 consisted of the following:

\$s in thousands	2017	2016
Cell development costs	\$ 142,144	\$ 128,821
Land and improvements	36,499	34,285
Buildings and improvements	87,034	78,081
Railcars	17,299	17,299
Vehicles and other equipment	122,697	110,267
Construction in progress	23,334	24,392
Total property and equipment	429,007	393,145
Accumulated depreciation and amortization	(194,575)	(166,908)
Property and equipment, net	\$ 234,432	\$ 226,237

Depreciation and amortization expense was \$28.3 million, \$25.3 million and \$27.9 million for the years ended December 31, 2017, 2016 and 2015, respectively.

NOTE 12. GOODWILL AND INTANGIBLE ASSETS

Goodwill and intangible assets as of December 31, 2017, were the result of our acquisitions of ESI and the Vernon, California based RCRA Part B, liquids and solids waste treatment and storage facility of Evoqua Water Technologies LLC in 2016, EQ in 2014, Dynecol in 2012 and Stablex in 2010. Changes in goodwill for the years ended December 31, 2017 and 2016 were as follows:

\$s in thousands	Environmental Services		Field & Industrial Services		Total
	Gross	Accumulated Impairment	Gross	Accumulated Impairment	
Balance at December 31, 2015	\$ 147,692	\$ —	\$ 44,131	\$ —	\$ 191,823
ESI Acquisition	1,011	—	—	—	1,011
Vernon Acquisition	354	—	—	—	354
Foreign currency translation and other adjustments	433	—	—	—	433
Balance at December 31, 2016	149,490	—	44,131	—	193,621
Impairment charges	—	(5,457)	—	—	(5,457)
Foreign currency translation and other adjustments	1,209	—	—	—	1,209
Balance at December 31, 2017	\$ 150,699	\$ (5,457)	\$ 44,131	\$ —	\$ 189,373

We assess goodwill for impairment during the fourth quarter as of October 1 of each year, and also if an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below its carrying amount. The assessment consists of comparing the fair value of the reporting unit to the carrying value of the net assets assigned to the reporting unit, including goodwill.

Fair values are generally determined by using a market approach, applying a multiple of earnings based on guideline for publicly traded companies, an income approach, discounting projected future cash flows based on our expectations of the current and future operating environment, or a combination thereof. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. The rates used to discount projected future cash flows reflect a weighted average cost

Table of Contents

of capital based on our industry, capital structure and risk premiums including those reflected in the current market capitalization.

The result of the annual assessment of goodwill undertaken in the fourth quarter of 2017 indicated that the fair value of each of our reporting units was in excess of its respective carrying value, with the exception of the Resource Recovery reporting unit.

In performing the annual goodwill impairment test, the estimated fair value of the Resource Recovery reporting unit was determined under an income approach using discounted projected future cash flows and then compared to the reporting unit's carrying amount as of October 1, 2017. Based on the results of that evaluation, the carrying amount of the Resource Recovery reporting unit, including \$5.5 million of goodwill, exceeded the estimated fair value of the reporting unit by more than \$5.5 million and, as a result, we recognized a \$5.5 million impairment charge, representing the reporting unit's entire goodwill balance, in the fourth quarter of 2017.

Our Resource Recovery reporting unit offers full-service storm water management and propylene glycol ("PG") deicing fluid recovery at major airports. Recovered fluids are transported to our recycling facility where they are distilled and resold to industrial users. The Resource Recovery reporting unit also generates revenues from brokered PG sales and services revenues for PG collection at the airports we service. The factors contributing to the \$5.5 million goodwill impairment charge principally related to weak PG commodity prices and reduced PG collection volumes at the airports we service, which negatively impacted the reporting unit's prospective financial information in its discounted cash flow model and the reporting unit's estimated fair value. A longer-than-expected recovery in PG commodity pricing and PG collection volumes became evident during the fourth quarter of 2017 as management completed its 2018 budgeting cycle and updated the long-term projections for the reporting unit which, as a result, decreased the reporting unit's anticipated future cash flows as compared to those estimated previously.

Intangible assets as of December 31, 2017 and 2016 consisted of the following:

	2017			2016		
\$s in thousands	Cost	Accumulated Amortization	Net	Cost	Accumulated Amortization	Net
Amortizing intangible assets:

We review intangible assets with indefinite useful lives for impairment during the fourth quarter as of October 1 of each year. Fair value is generally determined by considering an internally-developed discounted projected cash flow analysis. Estimating future cash flows requires significant judgment about factors such as general economic conditions and projected growth rates, and our estimates often vary from the cash flows eventually realized. If the fair value of an asset is determined to be less than the carrying amount of the intangible asset, an impairment in the amount of the difference is recorded in the period in which the annual assessment occurs.

Table of Contents

The result of the annual assessment of intangible assets with indefinite useful lives undertaken in the fourth quarter of 2017 indicated no impairment charges were required, with the exception of the indefinite-lived intangible waste collection, recycling and resale permit associated with our Resource Recovery business.

In performing the annual indefinite-lived intangible assets impairment test, the estimated fair value of the Resource Recovery waste collection, recycling and resale permit was determined under an income approach using discounted projected future cash flows associated with the permit and then compared to the \$3.7 million carrying amount of the permit as of October 1, 2017. Based on the results of that evaluation, the carrying amount of the permit exceeded the estimated fair value of the permit and, as a result, we recognized a \$3.4 million impairment charge in the fourth quarter of 2017. The factors and timing contributing to the nonamortizing permit impairment charge were the same as the factors and timing described above with regards to the Resource Recovery reporting unit goodwill impairment charge.

In the fourth quarter of 2017, we performed an assessment of the Resource Recovery business' finite-lived tangible and intangible assets, as events indicated their carrying values may not be recoverable. The result of the assessment indicated no impairment charges were required.

Amortization expense of amortizing intangible assets was \$9.9 million, \$10.6 million and \$12.3 million for the years ended December 31, 2017, 2016 and 2015, respectively. Foreign intangible asset carrying amounts are affected by foreign currency translation. Future amortization expense of amortizing intangible assets is expected to be as follows:

\$s in thousands	Expected Amortization
2018	\$ 9,215
2019	9,215
2020	9,215
2021	9,215
2022	9,215
Thereafter	128,361
	\$ 174,436

NOTE 13. EMPLOYEE BENEFIT PLANS

Defined Contribution Plans

We maintain the US Ecology, Inc., 401(k) Savings and Retirement Plan ("the Plan") for employees who voluntarily contribute a portion of their compensation, thereby deferring income for federal income tax purposes. The Plan covers substantially all of our employees in the United States. Participants may contribute a percentage of salary up to the IRS limitations. The Company contributes a matching contribution equal to 55% of participant contributions up to 6% of eligible compensation. The Company contributed matching contributions to the Plan of \$2.1 million, \$1.9 million and \$2.3 million in 2017, 2016 and 2015, respectively.

We also maintain the Stalex Canada Inc. Simplified Pension Plan ("the SPP"). This defined contribution plan covers substantially all of our employees at our Blainville, Québec facility in Canada. Participants receive a Company contribution equal to 5% of their annual salary. The Company contributed \$556,000, \$507,000 and \$515,000 to the

SPP in 2017, 2016 and 2015, respectively.

Multi-Employer Defined Benefit Pension Plans

Certain of the Company's wholly-owned subsidiaries acquired in connection with the acquisition of EQ on June 17, 2014 participate in three multi-employer defined benefit pension plans under the terms of collective bargaining agreements covering most of the subsidiaries' union employees. Contributions are determined in accordance with the provisions of negotiated labor contracts and are generally based on stipulated rates per hours worked. Benefits under these plans are generally based on compensation levels and years of service.

80

Table of Contents

The financial risks of participating in multi-employer plans are different from single employer defined benefit pension plans in the following respects:

- Assets contributed to the multi-employer plan by one employer may be used to provide benefits to employees of other participating employers.
- If a participating employer discontinues contributions to a plan, the unfunded obligations of the plan may be borne by the remaining participating employers.
- If a participating employer chooses to stop participating in a plan, a withdrawal liability may be created based on the unfunded vested benefits for all employees in the plan.

Information regarding significant multi-employer pension benefit plans in which the Company participates is shown in the following table:

Name of Plan	Plan Employer ID Number	Plan Number	Pension Protection Act Certified Zone Status	
			2017	2016
Operating Engineers Local 324 Pension Fund	38-1900637	001	Red	Red

The Company contributed \$1.0 million and \$933,000 to the Operating Engineers Local 324 Pension Fund (the “Local 324 Plan”) in 2017 and 2016, respectively. The Company also contributed \$217,000 and \$229,000 to other multi-employer plans in 2017 and 2016, respectively, which are excluded from the table above as they are not individually significant.

Based on information as of April 30, 2017 and 2016, the year end of the Local 324 Plan, the Company's contributions made to the Local 324 Plan represented less than 5% of total contributions received by the Local 324 Plan during the 2017 and 2016 plan years.

The certified zone status in the table above is defined by the Department of Labor and the Pension Protection Act of 2006 and represents the level at which the plan is funded. Plans in the red zone are less than 65% funded; plans in the yellow zone are less than 80% funded; and plans in the green zone are at least 80% funded. The certified zone status is as of the Local 324 Plan's year end of April 30, 2017 and 2016.

A financial improvement or rehabilitation plan, as defined under ERISA, was adopted by the Local 324 Plan on March 17, 2011 and the Rehabilitation Period began May 1, 2013.

As of December 31, 2017, 146 employees were employed under union collective bargaining agreements with the Local 324 Operating Engineers union. Our three remaining collective bargaining agreements expire on May 31, 2018, November 30, 2020 and April 30, 2022.

NOTE 14. CLOSURE AND POST CLOSURE OBLIGATIONS

Our accrued closure and post-closure liability represents the expected future costs, including corrective actions, associated with closure and post-closure of our operating and non-operating disposal facilities. We record the fair value of our closure and post-closure obligations as a liability in the period in which the regulatory obligation to retire a specific asset is triggered. For our individual landfill cells, the required closure and post-closure obligations under the terms of our permits and our intended operation of the landfill cell are triggered and recorded when the cell is

placed into service and waste is initially disposed in the landfill cell. The fair value is based on the total estimated costs to close the landfill cell and perform post-closure activities once the landfill cell has reached capacity and is no longer accepting waste. We perform periodic reviews of both non-operating and operating facilities and revise accruals for estimated closure and post-closure, remediation or other costs as necessary. Recorded liabilities are based on our best estimates of current costs and are updated

81

Table of Contents

periodically to include the effects of existing technology, presently enacted laws and regulations, inflation and other economic factors.

We do not presently bear significant financial responsibility for closure and/or post-closure care of the disposal facilities located on state-owned land at our Beatty, Nevada site; Provincial-owned land in Blainville, Québec; or state-leased federal land on the Department of Energy Hanford Reservation near Richland, Washington. The States of Nevada and Washington and the Province of Québec collect fees from us based on the waste received on a quarterly or annual basis. Such fees are deposited in dedicated, government-controlled funds to cover the future costs of closure and post-closure care and maintenance. Such fees are periodically reviewed for adequacy by the governmental authorities. We also maintain a surety bond for closure costs associated with the Stablex facility. Our lease agreement with the Province of Québec requires that the surety bond be maintained for 25 years after the lease expires. At December 31, 2017 we had \$752,000 in commercial surety bonds dedicated for closure obligations.

In accounting for closure and post-closure obligations, which represent our asset retirement obligations, we recognize a liability as part of the fair value of future asset retirement obligations and an associated asset as part of the carrying amount of the underlying asset. This obligation is valued based on our best estimates of current costs and current estimated closure and post-closure costs taking into account current technology, material and service costs, laws and regulations. These cost estimates are increased by an estimated inflation rate, estimated to be 2.6% at December 31, 2017. Inflated current costs are then discounted using our credit adjusted risk free interest rate, which approximates our incremental borrowing rate, in effect at the time the obligation is established or when there are upward revisions to our estimated closure and post closure costs. Our weighted average credit adjusted risk free interest rate at December 31, 2017 approximated 5.9%.

Changes to reported closure and post closure obligations for the years ended December 31, 2017 and 2016, were as follows:

\$s in thousands	2017	2016
Closure and post-closure obligations, beginning of year	\$ 75,082	\$ 71,154
Accretion expense	3,026	3,953
Payments	(1,794)	(1,754)
Adjustments	(352)	1,697
Foreign currency translation	126	32
Closure and post-closure obligations, end of year	76,088	75,082
Less current portion	(2,330)	(2,256)
Long-term portion	\$ 73,758	\$ 72,826

Adjustment to the obligations represents changes in the expected timing or amount of cash expenditures based upon actual and estimated cash expenditures. The adjustments in 2017 were primarily attributable to an \$897,000 decrease in closure and post-closure obligations at our Grand View, Idaho operating facility due to a change in closure timing, partially offset by a \$545,000 increase to the obligation for our Blainville, Québec, Canada operating facility associated with a newly-constructed disposal cell. The adjustments in 2016 were primarily attributable to a \$1.3 million increase in post-closure obligations for our non-operating facilities due to changes in estimated post-closure costs and a \$496,000 increase to the obligation for our Blainville, Québec, Canada operating facility associated with a newly-constructed disposal cell.

Edgar Filing: US ECOLOGY, INC. - Form 10-K

Changes in the reported closure and post closure asset, recorded as a component of Property and equipment, net, in the consolidated balance sheet, for the years ended December 31, 2017 and 2016 were as follows:

\$s in thousands	2017	2016
Net closure and post-closure asset, beginning of year	\$ 22,408	\$ 23,043
Additions or adjustments to closure and post-closure asset	(352)	426
Amortization of closure and post-closure asset	(1,757)	(1,128)
Foreign currency translation	196	67
Net closure and post-closure asset, end of year	\$ 20,495	\$ 22,408

Long-term debt	\$ 277,000	\$ 274,459

Future maturities of long-term debt, excluding unamortized discount and debt issuance costs, as of December 31, 2017 consist of the following:

\$s in thousands	Maturities
2018	\$ —
2019	—
2020	—
2021	—
2022	277,000
Thereafter	—
	\$ 277,000

New Credit Agreement

On April 18, 2017, the Company entered into a new senior secured credit agreement (the “New Credit Agreement”) with Wells Fargo Bank, National Association (“Wells Fargo”), as administrative agent for the lenders, swingline lender and issuing lender, and Bank of America, N.A., as an issuing lender, that provides for a \$500.0 million, five-year revolving credit facility (the “Revolving Credit Facility”), including a \$75.0 million sublimit for the issuance of standby letters of credit and a \$25.0 million sublimit for the issuance of swingline loans used to fund short-term working capital requirements. The New Credit Agreement also contains an accordion feature whereby the Company may request up to \$200.0 million of additional funds through an increase to the Revolving Credit Facility, through incremental term loans, or some combination thereof. In connection with the Company’s entry into the New Credit Agreement, the Company terminated its existing credit agreement with Wells Fargo, dated June 17, 2014 (the “Former Credit Agreement”). Immediately prior to the termination of the Former Credit Agreement, there were \$278.3 million of term loans and no revolving loans outstanding under the Former Credit Agreement. No early termination penalties were incurred as a result of the termination of the Former Credit Agreement. The Company wrote off certain unamortized deferred financing costs and original issue discount associated with the Former Credit Agreement that were to be amortized to interest expense in future periods through a one-time non-cash charge of \$5.5 million to

interest expense in the second quarter of 2017.

83

Table of Contents

The Revolving Credit Facility provides up to \$500.0 million of revolving credit loans or letters of credit with the use of proceeds restricted solely for working capital and other general corporate purposes (including acquisitions and capital expenditures). Under the Revolving Credit Facility, revolving credit loans are available based on a base rate (as defined in the New Credit Agreement) or LIBOR, at the Company's option, plus an applicable margin which is determined according to a pricing grid under which the interest rate decreases or increases based on our ratio of funded debt to consolidated earnings before interest, taxes, depreciation and amortization (as defined in the New Credit Agreement), as set forth in the table below:

Total Net Leverage Ratio	LIBOR Rate Loans Interest Margin	Base Rate Loans Interest Margin
Equal to or greater than 3.25 to 1.00	2.00%	1.00%
Equal to or greater than 2.50 to 1.00, but less than 3.25 to 1.00	1.75%	0.75%
Equal to or greater than 1.75 to 1.00, but less than 2.50 to 1.00	1.50%	0.50%
Equal to or greater than 1.00 to 1.00, but less than 1.75 to 1.00	1.25%	0.25%
Less than 1.00 to 1.00	1.00%	0.00%

At December 31, 2017, the effective interest rate on the Revolving Credit Facility, after giving effect to the impact of our interest rate swap, was 3.39%. Interest only payments are due either quarterly or on the last day of any interest period, as applicable.

In October 2014, the Company entered into an interest rate swap agreement, effectively fixing the interest rate on \$190.0 million, or 69%, of the Revolving Credit Facility borrowings as of December 31, 2017. The interest rate swap agreement continued in place following the termination of the Former Credit Agreement. The critical terms of the interest rate swap and the forecasted transaction (periodic interest payments on the Company's variable-rate debt) did not change as a result of the refinancing therefore the interest rate swap continues to qualify as a highly-effective cash flow hedge, with gains and losses deferred in accumulated other comprehensive income to be recognized as an adjustment to interest expense in the same period that the hedged interest payments affect earnings.

The Company is required to pay a commitment fee ranging from 0.175% to 0.35% on the average daily unused portion of the Revolving Credit Facility, with such commitment fee to be reduced based upon the Company's total net leverage ratio (as defined in the New Credit Agreement). The maximum letter of credit capacity under the Revolving Credit Facility is \$75.0 million and the New Credit Agreement provides for a letter of credit fee equal to the applicable margin for LIBOR loans under the Revolving Credit Facility. At December 31, 2017, there were \$277.0 million of revolving credit loans outstanding on the Revolving Credit Facility. These revolving credit loans are due upon the earliest to occur of (a) April 18, 2022 (or, with respect to any lender, such later date as requested by us and accepted by such lender), (b) the date of termination of the entire revolving credit commitment (as defined in the New Credit Agreement) by us, and (c) the date of termination of the revolving credit commitment and are presented as long-term debt in the consolidated balance sheets.

The Company has entered into a sweep arrangement whereby day-to-day cash requirements in excess of available cash balances are advanced to the Company on an as-needed basis with repayments of these advances automatically made from subsequent deposits to our cash operating accounts (the "Sweep Arrangement"). Total advances outstanding under the Sweep Arrangement are subject to the \$25.0 million swingline loan sublimit under the Revolving Credit Facility. The Company's revolving credit loans outstanding under the Revolving Credit Facility are not subject to repayment through the Sweep Arrangement. As of December 31, 2017, there were no amounts outstanding subject to the Sweep Arrangement.

As of December 31, 2017, the availability under the Revolving Credit Facility was \$216.7 million with \$6.3 million of the Revolving Credit Facility issued in the form of standby letters of credit utilized as collateral for closure and post-closure financial assurance and other assurance obligations.

The Company may at any time and from time to time prepay revolving credit loans and swingline loans, in whole or in part, without premium or penalty, subject to the obligation to indemnify each of the lenders against any actual loss or expense (including any loss or expense arising from the liquidation or reemployment of funds obtained by it to maintain a LIBOR rate loan (as defined in the New Credit Agreement) or from fees payable to terminate the deposits from which

Table of Contents

such funds were obtained) with respect to the early termination of any LIBOR rate loan. The New Credit Agreement provides for mandatory prepayment at any time if the revolving credit outstandings exceed the revolving credit commitment (as such terms are defined in the New Credit Agreement), in an amount equal to such excess. Subject to certain exceptions, the New Credit Agreement provides for mandatory prepayment upon certain asset dispositions, casualty events and issuances of indebtedness.

Pursuant to (i) an unconditional guarantee agreement and (ii) a collateral agreement, each entered into by the Company and its domestic subsidiaries on April 18, 2017, the Company's obligations under the New Credit Agreement are (or will be) jointly and severally and fully and unconditionally guaranteed on a senior basis by all of the Company's existing and certain future domestic subsidiaries and are secured by substantially all of the assets of the Company and the Company's existing and certain future domestic subsidiaries (subject to certain exclusions), including 100% of the equity interests of the Company's domestic subsidiaries and 65% of the voting equity interests of the Company's directly owned foreign subsidiaries (and 100% of the non-voting equity interests of the Company's directly owned foreign subsidiaries).

The New Credit Agreement contains customary restrictive covenants, subject to certain permitted amounts and exceptions, including covenants limiting the ability of the Company to incur additional indebtedness, pay dividends and make other restricted payments, repurchase shares of our outstanding stock and create certain liens. Upon the occurrence of an event of default (as defined in the New Credit Agreement), among other things, amounts outstanding under the New Credit Agreement may be accelerated and the commitments may be terminated.

The New Credit Agreement also contains financial maintenance covenants, a maximum consolidated total net leverage ratio and a consolidated interest coverage ratio (as such terms are defined in the New Credit Agreement). Our consolidated total net leverage ratio as of the last day of any fiscal quarter, commencing with the fiscal quarter ending June 30, 2017, may not exceed 3.50 to 1.00, subject to certain exceptions. Our consolidated interest coverage ratio as of the last day of any fiscal quarter, commencing with the fiscal quarter ending June 30, 2017, may not be less than 3.00 to 1.00.

At December 31, 2017, we were in compliance with all of the financial covenants in the New Credit Agreement.

Former Credit Agreement

On June 17, 2014, the Company entered into a \$540.0 million senior secured credit agreement with a syndicate of banks comprised of a \$415.0 million term loan (the "Former Term Loan") with a maturity date of June 17, 2021 and a \$125.0 million revolving line of credit (the "Former Revolving Credit Facility") with a maturity date of June 17, 2019.

The Former Term Loan provided an initial commitment amount of \$415.0 million and bore interest at a base rate (as defined in the Former Credit Agreement) plus 2.00% or LIBOR plus 3.00%, at the Company's option.

The Former Revolving Credit Facility provided up to \$125.0 million of revolving credit loans or letters of credit with the use of proceeds restricted solely for working capital and other general corporate purposes. Under the Former Revolving Credit Facility, revolving loans were available based on a base rate (as defined in the Former Credit Agreement) or LIBOR, at the Company's option, plus an applicable margin which was determined according to a pricing grid under which the interest rate decreased or increased based on our ratio of funded debt to consolidated earnings before interest, taxes, depreciation and amortization (as defined in the Former Credit Agreement). The maximum letter of credit capacity under the Former Revolving Credit Facility was \$50.0 million and the Former Credit Agreement provided for a letter of credit fee equal to the applicable margin for LIBOR loans under the Former Revolving Credit Facility. At December 31, 2016, there were \$2.2 million of working capital borrowings outstanding on the Former Revolving Credit Facility. These borrowings were due "on demand" and presented as short-term borrowings in the consolidated balance sheets.

NOTE 16. INCOME TAXES

The components of the income tax expense consisted of the following:

\$s in thousands	2017	2016	2015
Current:			
U.S. Federal	\$ 11,157	\$ 17,866	\$ 17,818
State	2,482	3,324	2,830
Foreign	5,398	2,459	3,279
Total current	19,037	23,649	23,927
Deferred:			
U.S. Federal	(27,029)	(1,790)	(2,355)
State	2,323	(275)	125
Foreign	(726)	(535)	(453)
Total deferred	(25,432)	(2,600)	(2,683)
Income tax (benefit) expense	\$ (6,395)	\$ 21,049	\$ 21,244

On December 22, 2017, the Tax Act was signed into law making significant changes to the Internal Revenue Code. Changes include, but are not limited to, a corporate tax rate decrease from 35% to 21% effective for tax years beginning after December 31, 2017, the transition of U.S. international taxation from a worldwide tax system to a territorial system, and a one-time transition tax on the mandatory deemed repatriation of cumulative foreign earnings as of December 31, 2017. The Company has calculated a provisional amount of the impact of the Tax Act in its year end income tax provision in accordance with its understanding of the Tax Act and guidance available as of the date of this filing and as a result has recorded \$23.8 million as a net income tax benefit in the fourth quarter of 2017, the period in which the legislation was enacted. The provisional benefit amount related to the re-measurement of certain deferred tax assets and liabilities based on the rates at which they are expected to reverse in the future was \$25.2 million. The provisional expense amount related to the one-time transition tax on the mandatory deemed repatriation of foreign earnings was \$1.4 million based on cumulative foreign earnings of \$26.7 million.

In connection with the Tax Act being signed into law on December 22, 2017, the SEC staff issued SAB 118 to address the application of GAAP in situations when a registrant does not have the necessary information available, prepared, or analyzed (including computations) in reasonable detail to complete the accounting for certain income tax effects of the Tax Act. In accordance with SAB 118, we have determined that the \$25.2 million of the deferred tax benefit recorded in connection with the re-measurement of certain deferred tax assets and liabilities and the \$1.4 million of current tax expense recorded in connection with the transition tax on the mandatory deemed repatriation of foreign earnings are provisional amounts estimated based on information available as of December 31, 2017. These amounts are subject to change as we obtain information necessary to complete the calculations. Any subsequent adjustment to these provisional amounts will be recorded to current tax expense in 2018 when the analysis is complete. We expect to complete our analysis of the provisional items during the second half of 2018. The effects of other provisions of the Tax Act are being analyzed and are subject to change as additional information, guidance, and regulation become available.

We have historically considered the undistributed earnings of our foreign subsidiaries to be indefinitely reinvested. Accordingly, prior to the enactment of the Tax Act, no U.S. income and foreign withholding taxes had been provided on such earnings. As a result of the Tax Act being signed into law on December 22, 2017 we recorded a provisional expense related to the one-time transition tax on the mandatory deemed repatriation of foreign earnings of \$1.4 million based on cumulative foreign earnings of \$26.7 million. Any actual repatriation from our non-U.S. subsidiaries

could still be subject to additional foreign withholding taxes and U.S. state taxes.

We are currently analyzing our global working capital and cash requirements and the potential tax liabilities attributable to a repatriation, including calculating any excess of the amount for financial reporting over the tax basis in our foreign subsidiaries, but we have yet to determine whether we plan to change our prior assertion and repatriate earnings. Accordingly, we have not recorded any deferred taxes attributable to our investments in our foreign subsidiaries. We will record the tax effects of any change in our prior assertion in the period that we complete our analysis and are able to make

Table of Contents

a reasonable estimate, and disclose any unrecognized deferred tax liability for temporary differences related to our foreign investments, if practicable.

Due to the adoption of ASU 2016-09 in 2017, all excess tax benefits and deficiencies are recognized as income tax expense in the Company's consolidated statement of operations. This will result in increased volatility in the Company's effective tax rate.

A reconciliation between the effective income tax rate and the applicable statutory federal and state income tax rate is as follows:

	2017		2016		2015	
Taxes computed at statutory rate	35.0	%	35.0	%	35.0	%
Impairment and loss on divestiture	4.4		—		5.7	
State income taxes (net of federal income tax benefit)	2.9		3.3		4.0	
Non-deductible transaction costs	—		0.2		0.3	
Tax Cuts and Jobs Act of 2017	(55.4)		—		—	
Foreign rate differential	(2.9)		(1.1)		(1.8)	
Other	1.1		0.7		2.1	
	(14.9)	%	38.1	%	45.3	%

The components of the total net deferred tax assets and liabilities as of December 31, 2017 and 2016 consisted of the following:

\$s in thousands	2017	2016
Deferred tax assets:		
Net operating loss, foreign tax credit and capital loss carry forwards	\$ 2,493	\$ 3,307
Accruals, allowances and other	3,603	5,269
Environmental compliance and other site related costs	8,549	12,479
Unrealized foreign exchange gains and losses	1,120	2,153
Unrealized gains and losses on interest rate hedge	134	1,119
Total deferred tax assets	15,899	24,327
Less: valuation allowance
