 - Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))
-

Item 8.01. Other Events.

CVR Energy, Inc. (the Company) announced that it expects its refinery in Coffeyville, Kansas to operate at an average crude throughput of approximately 108,000 barrels per day for the quarter ending June 30, 2011 versus the previously disclosed estimate of 115,000 barrels per day. The Company's refinery experienced a small fire at its continuous catalyst reformer (CCR) in May 2011. As a result of the repairs determined to be necessary, the Company expects to operate at the reduced crude throughput rate described above for the second quarter and may operate at reduced crude throughputs until the refinery undergoes its previously scheduled turnaround in October 2011. The refinery is currently running crude throughput of approximately 112,000 barrels per day. Repairs to the damaged CCR are expected to cost approximately \$3.4 million (before any insurance recovery) and the Company does not anticipate the incident will otherwise have a material long-term impact on its results of operations.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.
